## As The Editor Sees It

AS the GUIDE has said at various times of late, there can be no entirely satisfactory adjustment of business conditions unless the shortage of both skilled and common labor is somewhat mitigated. A few issues back we mentioned some of the ways in which apprenticeship in the building trades is being fostered and made more alluring to the prospective apprentice. However, the work should not and can not depend entirely on construction organizations. There is certainly a very definite need which our public school has, so far, failed to meet; i. e., to prepare boys (and incidentally, girls) for the place in life which they are destined to fill. Schooling, if it meant a definite preparation for the trade a boy is to follow, would be much more attractive to many a young fellow, now entirely devoid of ambition to learn; and finding school irksome, because school does not, in his case, tend toward any greater earning capacity so far as he can see. In a recent address in Minneapolis, says the *American Contractor*, Dr. Donald W. Cowling, the president of the Carleton College, Minnesota, stated that there were in schools of the United States about 30,000,000 persons, of whom about 10 per cent would go through the high schools. In connection with the move to induce the state to assume toward the mechanic trades a broader sphere of training, it seems to be pertinent to question whether the edu-

cational system is doing anywhere near its duty to the 90 per cent who cannot go through the high schools.

Whether unable through intellectual limitations or through financial inability to continue in school, assuredly they are entitled to a reasonable chance to be trained in some occupation or employment whereby they may hope to make a living at maturity.

Our educational system does excellently for the young person who wishes to be a doctor, a lawyer, a dentist, an engineer, or a member of some other profession; but what about the rank and file who cannot aspire to the profession? Are they to be regarded as purely proletariat and to be ignored as having no right to a chance for training in a gainful occupation? This view is a disastrous one from any standpoint, since the young people who leave the grade schools or who drop out of the early classes of the high schools after an ignominious failure include many who might make first-class artisans in various lines.

Their trend may not be toward the professions, and yet they may be quite as efficient in the lines to which they have a bent as their colleagues who go into the professions. Furthermore, they would be better citizens, since, in having some definite trade they would have something to lean upon as a means of livelihood, whereas, without it and without the mental training which it carries, they will

not be so likely to think straight and to recognize the obligations upon them as citizens. Loose thinking and the reckless assumption that the country owes them a living, while they have no obligations, may in time very easily come from their being thrust into the world of work without any training to which to turn. Can our educational system honestly claim to have done its duty to this great mass, which has absolutely nothing offered it beyond the three R's, good foundation, but mighty little superstructure?

AS for common labor, there can be no relief in the shortage there unless immigration restrictions are lifted. At a meeting of Illinois Manufacturers, held in Chicago on December 15, the following pertinent resolutions were adopted:

WHEREAS, Over a great period of years, the United States has relied upon a continuing flow of immigration to largely supplement the skilled and unskilled labor required for furthering the development of agriculture, commerce, transportation and industry; this being vital to all, employers and wage earners alike.

WHEREAS, With the exception of a single year, such immigration substantially ceased since the outbreak of the Great War and is now severely restricted by emergency legislation con-

ceived to meet conditions which existed immediately after the war.

WHEREAS, The nation is vitally concerned in at once relieving the diminishing agricultural labor and industrial supply and at the same time protecting the quality of our citizenship; be it

RESOLVED, That in the opinion of the National Conference of State Manufacturers' Associations there exists a continuing shortage of farm and industrial labor which affects efficient and economical agricultural and industrial production, and precludes any relief to the prevailing high cost of living, and that this situation requires immediate action on the part of the federal government in order that the facts may be ascertained on which Congress may base a constructive immigration bill.

We further believe that the best interests of the nation will be furthered by the substitution of a constructive policy of selective immigration for our present negative policy.

We recommend, further, that in the national interest the federal government should assert the right and assume the responsibility of controlling, registering, distributing and educating the immigrant during the period of his alienage.

This association hereby pledges its aid to the government and tenders its facilities for the securing of information in relation to the general situation as it affects our agricultural, commercial and industrial life and gives its assurance that it will lend its hearty co-operation with any and all other organizations working towards the same end.

## HAMPTON'S NEW COURSE FOR BUILDERS

BY H. WHITTEMORE BROWN

*In charge of the Department of Building Construction*

IF we analyze the present organization of the building industry we may distinguish four groups into which fall various phases of building construction. The first group, embracing the architect and the engineer, is charged with the analysis of the requirements for the project in mind and the preparation of plans and specifications indicating how these requirements are to be fulfilled. The function of the second group, usually called contractors or builders, is to supervise the combination of materials by labor so that the required result may be obtained quickly and economically. The third group includes those who manufacture and distribute construction materials and supplies. The fourth group consists of mechanics and laborers on the job.

The demarcation of these groups is not always clear; we have examples of sev-

eral and even all four functions being performed by one man, such as the country builder (especially in earlier times) who cut the timber and from it built a house. On the other hand, in many instances these groups are minutely subdivided, and we have architects specializing in various details, sub-contractors, specialized trades, etc. We may utilize the main groups, however, as a basis for studying the educational requirements of the industry.

Architecture and engineering have received considerable attention from trained educators for a great many years, resulting in quite systematic and uniform procedure in teaching these subjects. Likewise, instruction in the various trades has been offered for several years, while recently courses in business management, particularly as applied to manufacturing and distribution, have been established.

When we search for an instance of careful consideration of the training for the remaining link in the chain—the builder—we are not so easily rewarded. Few, if any, educational institutions have attempted to provide a well-rounded curriculum of a grade which would be considered necessary in nearly all other fields, and designed to equip the student with the fundamental principles of the building business.

The result of this lack of systematic training for builders is a large number of men undertaking the business unprepared to cope with its many difficulties. Architects and engineers who enter it are usually unaccustomed to business affairs and lack the detailed knowledge of the building trades which is essential to the builder. The mechanic who becomes a builder finds difficulty in mastering business details, as well as many technical points which his trade experience has not covered. In addition to these men who have had training in some phase of the industry, we have a large class of men entering the business with no other claim for recognition than their low bid, giving rise to the term "building broker."

That chaotic conditions actually exist, anyone who has received competitive bids on some building work will readily attest. Variations sometimes as high as one hundred per cent. on identical work, and frequent failures among builders are not due entirely to unstable conditions in the industry.

Many graduates of the Hampton Institute Trade School have developed from mechanics into builders, and in some cases even into architects; numerous examples of builders developing in this manner might tend to prove that the present trade training is sufficient. Further investigation, however, shows that nearly all of these men have been at a disadvan-

(Continued from page 4)

tage because they lacked knowledge of the principles of the business or, expressed in another way, their success would have been greater if they had had an opportunity to study systematically the handling of construction work.

It is evident, therefore, that something should be done, not only to improve conditions in the building industry, but also to enlarge the opportunities of the graduates of Hampton and other trade schools.

If some method can be found to teach men the principles of the building business so that they may enter this field well equipped to solve the intricate problems which confront them, they will have many opportunities for success and for service to their communities.

Let us study, therefore, the requirements of a good builder, and determine what instruction should be provided to assist capable men to attain this worthy goal.

These requirements may be divided into six different groups, each dealing with a characteristic necessary to the make-up of a good builder. First among these is the way in which he carries on the business or office end of his affairs. His dealings with men, materials, and money are numerous and often intricate. Here accuracy is paramount, and slipshod methods are an almost sure road to failure. Briefly, the builder should have *Accurate Business Methods*.

The operation of the construction job calls for a different trait; here the ability to plan ahead so that the material arrives when the workmen need it and all are able to work to the greatest advantage, is important. The relationship between the builder and his men requires considerable tact. This all calls for *skillful Field Management*.

Again, the builder has to deal with all kinds of building materials, each requiring considerable knowledge, both in purchasing and in placing in the building. The architect may specify the material he wants, but the builder must find it and know how to put it where it belongs in the proper manner. This requires *Thorough Knowledge of Building Materials and Trades*.

The builder being confronted continually with the problem of using his material so as to give the greatest strength and rigidity to his structure, must have a good understanding of the laws of mechanics to aid him in determining how his material should be put together. This should come to him naturally, as a sort of sixth sense, and for that reason may be termed *Sound Structural Sense*.

A great many builders are called upon

to construct houses and other small buildings without the supervision of an architect. In fact few architects care to devote their time to this class of building because it requires a large amount of study and the return is comparatively small. This throws a large share of the responsibility for producing an attractive, economical house upon the builder. However, he need not be an architect too in order to fulfill this requirement. At present there is a rapid development of the standard-plan idea, whereby excellent plans for small and medium-sized houses are produced by a number of architects working together, and sold to builders and prospective owners at a nominal price made possible by quantity distribution. With these at his command the builder can satisfy almost any demand that may be made for plans. Acting as an adviser to the owner, however, the builder should have better than the average appreciation for the simplicity of good architecture and the fitness of a plan for given conditions. In other words, we say that the builder should have *Discriminating Architectural Taste*.

Much of the success of a builder depends upon his ability to make satisfactory contact with the persons with whom he has dealings. He must not neglect the human side of his development, and must keep his ideals high and his vision clear. He must be a man of *Broad Human Interests*.

While many of these characteristics are obtained only from years of experience, the aim of the Hampton Institute Builders' Course is to stimulate the interest of the prospective builder in all phases of the industry, and to give him training in as many of the problems he will be likely to encounter as may be possible under school conditions. The following outline is for the regular two year course:

- I ACCURATE BUSINESS METHODS
  - 1 Typewriting
  - 2 Accounting
  - 3 Time Keeping and Cost Records
  - 4 Quantity Surveying and Estimating
  - 5 Purchasing
  - 6 Business Law and Practice
- II SKILLFUL FIELD MANAGEMENT
  - 10 Laying Out Buildings
  - 11 Construction Machinery, Tools and Equipment

In order that a man may make satisfactory progress in a course such as outlined above, two requirements for admission are essential. First, the equivalent of a general high-school education, which should insure facility in the use of arithmetic, algebra, English, etc. Second, experience in some building trade, preferably as a journeyman, although graduation from an approved trade school and summer experience on actual construction should give one an appreciation of the quantity and quality of work demanded in practice, which is such essential experience for the builder.

The principal physical equipment necessary for carrying out such instruction, besides the usual class and lecture-rooms, is a laboratory where experience may be gained in the building materials and the trades which are developed for putting these materials together. Provided the student is thoroughly acquainted with one trade, he should obtain, in a comparatively short time, sufficient understanding of the other trades to enable him to supervise them intelligently. Thus his study of the materials and the trades can proceed hand in hand. At the same time this laboratory will contribute largely to the development of "sound structural sense," because strength is one of the most important properties of building materials which the student must consider. The Laboratory of Building Construction

which is now being equipped at Hampton has these objects in view. It is provided with a machine of fifty tons' capacity for testing the tensile, compressive, and transverse strength of various materials. Another machine designed especially for testing portland cement, mortar, etc., and other pieces of equipment, furnish means of studying the properties of these materials. Other machines having to do with special branches of the industry will be added from time to time. The whole floor space is served by two overhead traveling cranes, so that heavy objects encountered in the work may be handled with ease.

Another section of the laboratory is given over to permanent exhibitions illustrating the processes of manufacturing various building materials, details of their use, machinery, and supplies which play important roles in construction work. In addition there will be photographs showing various phases of building operations. The object of these exhibits is to supplement the class and lecture work, and enable the students to learn as much as possible through their eyes.

The equipment and personnel necessary for the conduct of the Builders' Course can be utilized in many ways which will be of advantage to those unable to attend the regular course. The maintenance of a Service Bureau as a clearing house for information on materials, supplies, and machinery bids fair to be one of the important functions of the Department of Building Construction, under which all of these activities will be carried on. The services of this Bureau will also be available for checking estimates and designs, making tests of materials, and increasing the usefulness of standard-plan services.

There are many subjects in the regular Builders' Course which would assist practicing builders in bettering their business. In order to reach these men, short courses in many of the regular subjects will be

offered so that builders may spend from one to six weeks at Hampton during the dull season perfecting themselves in various details. If the demand warrants, some of these subjects will be offered in night courses and by correspondence.

It is difficult for men in active building to keep abreast of the developments in their field. New materials, methods, and machinery are constantly being developed. It would be a great advantage to builders if they could have such things demonstrated and explained to them by competent persons, with an opportunity to ask questions or to try out questionable details for themselves.

The object of the annual Builders' Conferences, the first one of which is to be held at Hampton January 29, 30, and 31, 1923, is to give builders such an opportunity, and in addition to give them a chance to meet one another for exchange of ideas and experiences. At the first Conference emphasis will be laid upon the value and use of standard plans to the builder, and upon a demonstration of the use of the Laboratory of Building Construction. These subjects will be treated by several well-known and authoritative speakers. In addition many other subjects of interest to builders will be discussed, and arrangements have already been concluded for the demonstration of several pieces of modern construction machinery. The evenings will be devoted to get-together meetings, preceded by motion pictures of special interest to builders. These meetings will provide opportunities for getting acquainted and discussing matters of vital interest.

As the Conference is the opening event of the Department of Building Construction, every effort will be made to have it reach the high standard which has been set for all the other activities of this department, as well as of Hampton Institute in general.

### LIME PLASTER—WHAT IS IT?

Common lime, while to us it may seem a most ordinary product, has required countless ages in the processes of nature; the bringing into being, and the destruction of numberless organisms upon which nature has expended her resources for periods of time far beyond our comprehension. The last part of the process may be prosaic. Lime is the product derived from heating limestone rock until all the carbon dioxide gas has been expelled. When lime is slaked, that is, mixed with water, it has—to the uninitiated—some very wonderful properties, in the giving off of heat, as well as the qualities of the plaster which it produces.

Geology tells us that limestone rock is the calcareous deposits of various forms of marine life, resembling our present day clams and oysters. In certain parts of the country particularly rich in deposits of dolomite limestone, fossils, carbonated clams, are found in the rocks which closely resemble fresh water clams. Masses of shells and animal remains were stratified and compacted upon the bottom of the sea by the untiring and never ending action of the water; and here they remained for vast periods of time. Finally, through an upheaval of the earth's crust, these deposits appeared above the sea level as limestone ridges and out-croppings. From a purely chemical standpoint there are two kinds of limestone, one is composed chiefly of carbonate of calcium while the other includes magnesium also. This latter with its high content of magnesium is known as dolomite limestone.

—Keith's Magazine.

A survey of the year, says a bulletin of E. B. Smith & Co, makes evident the fact that the period has been one of general and sustained business improvement in the United States. The economic recovery of the country has been real and substantial,—a record of accomplishment despite unparalleled conditions of practically world-wide financial disorganization and political chaos which might well have been expected to affect it in unforeseen ways.

At the beginning of the year, steel production was less than 30% of capacity, and only sufficient to keep the mills from closing down entirely. Operations have now expanded to fully 80% of capacity, and it is reported that the unfilled ton-

nage will enable the mills to maintain this capacity for the next ten months.

A great demand for steel has come from the building and automobile trades, both of which may be taken as illustrating the improvement in American industry. The total value of new construction for the year 1922 will exceed four billion dollars, and will be approximately 40% greater than the total figure of 1921, and about 30% greater than that of 1919, the previous high record.

The automotive industry established a new high record by producing about 45% more cars than last year, and about 15% more than in the previous record of 1920. This indeed indicates a buying power which augurs well for industry.

Of all the economic movements with which this country approaches the end of the year, there is probably none of greater importance than that which marks the position of the crops. The continued rise in grains has brought wheat to 30% above its low price of the year. Corn has risen 46% above its minimum price of 1922. Cotton likewise has shown a rise of 63% above its low level of the year. Thus these staple products of American agriculture are selling 20% to 60% in advance of the prices at the beginning of the year. But the fact that their recovery in price has been disproportionately small in comparison with the prices of other commodities serves to restrict the purchasing power of the farmer and to act as an obstacle to the greater prosperity of the country.

Any improvement which the close of the year finds in the railroad situation must be considered a splendid tribute to the skillful management on the part of the railway executives. In practically every great industry, economic conditions determine the demand for the product, its selling price and cost. In the case of the railroads, economic conditions determine the demand for the product, but legal requirements determine the selling price and in large measure the cost of production. Here lies the crux of the railroad problem.

Deflation of wages during the year has not occurred to any appreciable extent. In this connection, it is worthy of consideration that wages were not liquidated in the deflationary years of 1920 and 1921.

The fundamental change for the better in American business during 1922 has brought about an equally extensive change in security prices. Twenty-five representative industrial stocks are selling on an average of 35 points higher than in 1921. The current price of twenty-five railroad stocks is 20 points higher.

It was not until the Fall that the results of active business were first noticeable

in the form of satisfactory earning statements and increased or restored dividends. But in the securities markets, all of this had been anticipated and discounted by a prolonged rise. Accordingly, when the business revival had become a recognized fact in September and October the stock market abruptly fell and it cancelled in a short time its rise since last Spring. The reaction, however, was due to technical speculative conditions and since the low prices of November, the market has experienced a decided recovery, presaging healthy industrial activity for the ensuing months as well as reflecting progress which has been made.

As additional evidences of the decided changes in the course of the past twelve months there might be recorded the improvement in the banking position of the country, now at a point almost without parallel in the annals of American finance; the loadings of railway cars never before exceeded at this time of the year; the new high record for the year in American exports established during November.

During the year 1922, the European situation, apparently going from bad to worse, has so affected our domestic outlook as to interest our financiers and business men in seeking the solution of all European problems which obstruct the normal channels of international commerce and trade. A decided undertone of improvement is felt by many.

The outlook for the new year is far from discouraging. It is evident that the recovery of domestic business is still in full swing, and that the peak has not yet been attained.

On the other hand, it must be born in mind that this recovery of business in general is abnormal, and has to do with the after effects of the Great War. It must be remembered that international trade relationship is a necessity to America as well as to the nations of Europe.

All live men are advertisers, and the only man who should not advertise is the man who has nothing to offer to the world in the way of human service, and such a man is a dead one, whether he knows it or not. Advertising is a legitimate and ethical proposition. Life is too short for you to hide yourself away, mantled in your modesty, and let the world hunt you out. Even the dead are advertisers, for on visiting a beautiful cemetery the other day, I noticed that on nearly every marble slab was given a list of the virtues, talents and beautiful qualities which the dead man was supposed to have carried in stock. This is what you call non-productive advertising, or advertising from an emotional standpoint.—Elbert Hubbard.

Phones—Bell, Spruce 1611,    Keystone, Main 7109

Just remember this: Give out courtesy, kindness, patience and good-will, and you'll get them all back with compound interest. The men who deserve to rank in Class A do not chew the lint and fuss about the small misfits of life. To take what comes and forget the rest is wisdom. Let Braggo give the janitor the call, and the Hall Boys have it out with the Ashbox Inspector—you can't afford to soil your soul with small scraps. Fight on a big scale, or not at all. The folks who have trouble with ushers are always looking for trouble—and find it. Smile, old boy, smile!

It is surely an injustice to your workmen as well as a source of loss to yourself to supply poor tools in your shop equipment. No man can do anything approaching good work with tools that take the edge off enthusiasm. In shop management, as in most things, details are the whole cloth. Tools are like men. They do good work or they do not, according to the character which they possess. Character in tools is a matter of good materials, expert making and correct design.

The valuable man in any business is the man who can and will co-operate with other men. The foreman who opposes the introduction of a new man into an institution and fights every innovation which he himself does not suggest, is doomed to a gradual and creeping defeat. Men succeed only as they utilize the services and ideas of other men. Co-operate!

Repetition tends to create habit, the more often we see, do or hear a thing, the quicker we are likely to be influenced by it. The consecutive appeal of a number of advertisements will develop certain memories and associations tending to overcome the natural habit of procrastination.—Making advertising pay.

Fifty years ago the grocer set out a keg of mackerel and a box of kindling wood, and sat down to wait for customers. Today he carries street-car and newspaper advertising and dresses his windows as smartly as the department store. If it didn't pay he'd still be sitting behind the stove waiting for customers with a mackerel keg out front doing service for a sign.

There is not a business one can think of, which is not full of little temples where one can curse or pray. Every business that one knows has its host of light in it, fighting against its host of darkness; one set of men conducting the business as if they and the public were engaged in a sort of mutual enthusiasm and daily service, with permanent success as the goal; and another set of men whose success is ruining the business to which they belong, and the public besides—and themselves.

A certain wallboard man advertised in the Guide for awhile and then dropped out. We've had a dozen inquiries since then, asking for his address—every inquiry from a cash buyer. This is a common occurrence. It's hard to make some advertisers see the vital importance of a standing "ad."

Man and the giraffe are the only two living things that can't swim naturally. Throw a day-old kitten into the Mississippi and it will paddle its way to shore. The giraffe can't swim because he's not built that way. Man can't swim, just because he is afraid. The chances are that the reason you are not in the swim—financially or otherwise—is because you are afraid.—Glen Buck.

All advertising pays—even that which is poorly constructed. A bad ad. is better than no ad. at all. It is worth all that it costs in the competitive world of the present day, merely to keep one's name where the possible buyer cannot help seeing it. To be out of sight in the commercial world is to be out of mind.

The only road to advancement is to do your work so well that you are always ahead of the demands of your position. Our employers do not decide whether we shall stay where we are or go on and up; we decide that matter ourselves. Success or failure is not chosen for us: we choose them for ourselves.—H. W. Mabie.

Ideals are like stars; you will not succeed in touching them with your hands, but like the seafaring man on the desert of waters, you choose them as your guides, and, following them, you reach your destiny.—Carl Schurz.

"Camouflage" doesn't pay in advertising. Don't call your cannon a bit of landscape. Be honest and gain the confidence of the public.

We'll write your advertising without charge. All we ask is that you pay for the space and provide our ad. man with the necessary selling pointers.

To be poor in a wealthy country, to be sick in a good climate, to be inefficient among a progressive people, is a sign of unwise educational methods. Such people were not taught to battle with the world or meet life's emergencies.—Thoreau.

An old legend tells of a magician's vase; the magician could get out of it only that which he put in. Advertising is just that. If you don't get into it the "kick" of salesmanship it is going to miss by just that much the pulling power it ought to have.

The BUILDERS' GUIDE is in its thirty-eighth year of continuous publication.

The man with an order to place doesn't hunt you up in the city directory these days. He hasn't the time. If he can't find you in your trade magazine he can and does find somebody else, and that somebody else books the order.

"Facts are stubborn things." Advertise only the truth about your product and watch the result.

When you stop to consider that the Guide reaches every week and is read by architects, builders, building owners, contractors and sub-bidders in every branch of building construction, you must perceive its unique importance as a medium for advertising with an appeal to that class. Every copy reaches a live prospect.

I make it a rule never to write a grouchy letter—I telephone.

Advertising is telling who you are, where you are, and what you have to offer the world in the way of service or commodity.

If nobody knows who you are, or what you have to offer, you do no business, and the world is the loser through giving you absent treatment.

Life is too short for the consumer to employ detectives to ferret out merchants who have the necessities of life to sell.

Don't be a Rip Van Winkle. Advertise and let everybody know you are awake and abreast of the times.

America stands supreme in the development and use of advertising, and advertising is the seed which by implanting desire produces the fruit of social advancement. Education promotes efficiency and efficiency in turn makes possible higher earning power, higher purchasing power and improved living conditions.

That plan of the king in olden times who killed the messenger who brought him bad news has my approval. Blessed are those who bring glad tidings! If you cannot write a good letter—don't!—Elbert Hubbard.

You know what propaganda is, don't you? You know, too, how effective a weapon it is, if used properly, don't you? Well, advertising—honest, fair advertising—is the best propaganda we know of. Join the propagandists now! Advertise in the "Builders' Guide."

Business is founded on reciprocity and co-operation. Any other plan than this spells bankruptcy. The successful business nowadays has a heart and a soul.

Many a man would do a better job if he didn't know about putty.—Ex.

## As The Editor Sees It

AT the beginning of a New Year it is interesting to consider what the prospects of prosperity are for the year before us. It is well to look forward, and, in a measure, be prepared to meet the problems and difficulties which will arise in the future. It is particularly valuable to obtain and digest the opinion of men rich in business experience whose judgments can be relied on as a guide for the future. Elbert H. Gary, chairman of the Board, United States Steel Corporation, draws some very enlightening conclusions for us in "Looking Forward by Looking Backward 20 Years" in *System*. Judge Gary asks:

Has the progression of this country been checked? Is it the part of wisdom to prepare against a long season of depression? Has the high point in general consumptive capacity been reached and must we anticipate a declining demand, or can we confidently look forward to increased production and prosperity during this year and the long future?

These are questions concerning which every careful man will give deliberate thought, and reach definite conclusions for a hesitating business cannot be satisfactory. During the last two years there has been some growth, but not sufficient. The increase in the savings bank deposits alone would demonstrate that the country as a whole has not slipped backward, although undoubtedly there have been in-

terruptions. Yet most of us have operated at less than capacity and profits have not been large or even fair. What does it all mean?

There is always with us a large group, possibly a majority, who look at every unfavorable symptom with the utmost pessimism, who say that there is no chance ahead; that everything is dark; that we cannot hope to go forward farther; and that we shall be lucky if we hold what we have. With these views I cannot agree. I have heard the same thing too often. Those who judge the condition of business by their emotions rather than by the law of supply and demand inevitably conclude that every depression is permanent. And there are others who take every boom to be the attainment of enduring prosperity.

The record of the last 20 years shows that while, with our present knowledge of business, we do not seem able wholly to prevent either depressions or inflation, the line of progress in the volume of goods consumed is rising. In the long swing of events the dips are purely transitory and all but negligible. They have been important only at the moment.

The capacity for making steel in this country has more than doubled in the last 20 years, which means roughly that the capacity of the people to use steel has doubled. During the same period the population has not doubled. It is per-

haps fair to take steel as an index to the consumption of goods in general.

We are not usually able to supply all of the goods that mankind needs. We have only temporarily been able to supply more than it could buy. The population of this country is growing, which means that its capacity to consume is increasing.

The individual is constantly acquiring more needs. We have the natural development of luxuries into necessities, as for instance steam heat in residences, and we have the development of facilities for increasing the efficacy of the individual, as for instance the automobile. Each one brings with it the opening of a new industry, a new and larger purchasing power, and the demand for more goods. Twenty years ago, to take the most familiar example, the making of automobiles was scarcely an industry. We all know what it is today.

Steel, of course, forms a relatively insignificant part of a woman's corset, yet the making of corsets annually absorbs many thousands of tons of steel. It is truly astounding how small changes in modes of life create demands on industry. There is no economic reason why this should be less in the future than in the past.

A big city seems to build more slowly than a mining town; but actually the consumption per capita of everything in the city, where the average income of

**DRAWING

**BLUE  
PRINTS**

the individual is relatively high, is greater than in the mining town. In like manner every man is justified in making plans for the future extension of his business in accordance with his capital resources and no other sort of expansion is ever justified.

We are carrying a very heavy governmental financial burden which will not soon be fully discharged. We must reckon for some time to come on taxes that will be none too easy to bear. Substantial addition to the present burden of taxation might be crushing. This is realized by the president and his associates and they are ably endeavoring to lighten the load. But until a large part at least of the cost of the war is paid, no amount of governmental economy can reduce taxes to a point where they will not have to be seriously reckoned with. Industry has proved that it can function under the present burden, but if new weights are added through oppressive laws, then the future is in doubt.

I cannot see other than good business ahead, provided natural economic progress is not interfered with. The greatest danger to the consistent and logical development of the country is in the possibility that attempts may be made to substitute unwise and sometimes vicious laws of man for the laws of Nature, thereby interrupting the even movement of supply and demand.

The natural law of supply and demand should not be interfered with by the Government or by any administrator of the laws excepting in cases involving turpitude, and this applies to every business transaction and all who are involved in the transaction. Only a little while ago when the war was on, this law had to be suspended because neither the supply nor the demand arose from natural causes—they had to bow to the exigencies of war. Some were even heard to say that Nature's laws could permanently be suspended. Everything that has happened since the war goes to prove otherwise—to prove that only as the law of supply and demand is permitted to operate can a country and its citizens soundly prosper. Serious trouble or disaster has followed every contrary course.

It is to me unthinkable that we should rear in this country any aristocracy of special privilege, whether that aristocracy be made up of those who sell the use of their hands, their brains, or their money. I am strongly opposed to special privilege of any kind. The progress and prosperity of no nation can long endure if any factor in economic life shall be especially favored or punished or exempted.

#### *Laws That Add to the Cost of Production*

Equality before the law is fundamental to industrial peace and prosperity. Yet

the disposition seems to be to pass laws which in a degree exempt labor organizations and farmer associations from governmental investigation, supervision, and control against wrong. Not only are they exempted from certain restrictive provisions of the existing statutes, but they are affirmatively permitted to do certain things prohibited to other groups of citizens.

To permit labor associations or farmer organizations to do, as the result of combination, things that are claimed to be beneficial to them but which are denied to others is to create classes, to favor some of them and to injure the whole body politic. It tends to array class against class, and it naturally adds to the cost of production. And be it remembered, the general purchasing public, in the end, must pay the bills. This, as a net result, is certain. This is not equal opportunity and equal obligation.

I willingly admit as to labor, towards which no one has better intentions than I have, that in the long past, as the result of class existence, it was not justly treated. Also, I know by experience and otherwise that the farmers, the most essential element of our national life, have not as a rule received adequate financial returns on their investment and labor. Every fair and reasonable measure to overcome this should be encouraged.

There is no reason why any group should not organize to gain for itself a better economic position if it believes that through organization that position can be gained. But it is not in the public interest to permit any group secretly to expend large sums of money for subversive propaganda. The public is entitled to know the facts about the expenditures of money to influence public opinion. The public is entitled to the record of receipts and expenditures of every kind and character of organization; of every business corporation, of every labor union, of every association, whether or not it be formed for profit.

The surest and wisest of all regulation is public opinion, but sound opinions cannot be formed excepting on the facts. To deny to the public the right to investigate any organization is in effect to deny it the right to gain the facts on which to base a judgment. It is hardly possible to have serious industrial disturbance if all the facts are known. In the graver strikes of the last several years the facts have not been generally known.

Above everything else, strict observance of the criminal laws should be enforced.

The progress of prosperity has been halted by these strikes which could not have last so long in the face of an enlightened public opinion, and there will

## HARDENED CONCRETE FLOORS DO NOT DUST

It is not necessary to put up with dusting cement floors. Over night a soft cement surface from which the cement dust can easily be scratched with the toe of the shoe—can be transformed into a hard, impenetrable floor that will not "sand" or crumble, even under the hardest foot traffic. Phone or write us for information.

## AS THE EDITOR SEES IT

(Continued from Page 20.)

continue to be stoppages of trade as long as full publicity for every factor in trade is not compelled by law.

There is, however, another phase. If any group be permitted to gain exemption from the law to have a privileged position, then it may use its advantage to obstruct the law of supply and demand for its own benefit. It will not in the long run gain anything of a permanent nature, for the economic laws are inexorable, but it will disturb the balance of industry. Artificial prices, prices based on other than the law of supply and demand—prevent the business of the country from freely functioning.

Many of our prices are still artificial. Profits are too low because costs are too high. The costs, where the natural law has been permitted to work, have lowered. Both transportation and coal are artificially above the general scale of prices and this prevents trade from flowing as freely as the condition of the country would warrant. There is propaganda tending toward spreading the belief that profits or wages can be maintained at artificial levels in certain lines without injuring the prosperity of the country as a whole. Employers know otherwise. They know that continuous profits come only from capable, honest management.

They have not always known this. Not many years ago, not much more than a score, the managers of some of the large private business corporations apparently believed that it was enough if their conduct was within the technical rules of law; that if no public law was violated the corporation should be permitted to secure unlimited profit and might treat indifferently its customers, its employees, its competitors, and the general public.

And not a few officials, with this reasoning, were inclined to take advantage of inside, advance information to promote their own pecuniary interests. They ignored the moral principles. They gave no thought to the Golden Rule. Competition was tyrannical and destructive. Weaker competitors were forced out of business, often by means not only unethical but brutal. Instead of competition being the life of trade it was the death of trade. Instead of monopoly being destroyed, it was encouraged. The letters written during this period by owners and managers of some of the great industrial concerns, furnished indisputable evidence of a disposition to ignore the principles of ethics.

*Business Changes of the Last 20 Years*

This school, following traditions, did not give just consideration to employees. The welfare of the workmen was decided almost entirely from the standpoint of utility and profit, a little thought and credit, of course, being given to safety

and physical condition as affecting ability to serve.

Within the last 20 years or more there has been a decided change in the standards and conduct of business. Thousands of business men all over this country, who 20 years ago believed that the subject of ethics had little, if any, rightful place in business conduct, now insist that it is controlling. Business throughout the United States is today transacted on a higher plane than ever before, though of course there is always need for further improvement.

The radical leaders start with the presumption that business is essentially dishonest, and there is not a little evidence that business may during this year be subjected to many unfair attacks which have as their end the obtaining of an advantage to a class and not to the country as a whole. The business man who sincerely believes himself honest will have the courage and strength to stand solidly against any unworthy attack touching his management. He can afford to be courageously patient while waiting for the real facts to develop. But this is no reason why a man in business should be the less equipped, if necessary to defend, and better to assert the economic basis of his position.

Those who attack business are often permitted to seem possessed of all the facts and the logic, whereas as a rule their facts are usually inaccurate and their logic vulnerable. Few men actually engaged in business have taken the time or the trouble to school themselves as theoretical, as well as practical, students of commerce.

A larger attention to economic fundamentals on the part of the man in business would do much toward checking the effectiveness of unfair attacks. Business is today a science and it needs to have a scientific equipment. And also its outlook might well be broadened, for the well-being of business and of the nation are inseparable.

Public investigation of business affairs by legislative committees is sometimes necessary and generally productive of good. But some investigations are a public nuisance which go beyond the legitimate domain of the examination, and more particularly, when misrepresentations or unfair methods are indulged in.

Some investigations have been of great benefit in exposing to the public facts relating to misconduct or mismanagement, and have resulted in correcting evils. But more frequently they are harmful because they are unfair, politically partisan and managed without regard to the rules which govern legal procedure.

The public interest is properly protected only when the facts are given to it by an honest, impartial, and intelligent

investigation by a Government board of undoubted merit which is nonpartisan in character. The governmental regulation of industry cannot be proper or desirable without the condition, that there shall be no discrimination—that all lines and departments of economic activity of similar importance shall be subjected to the same treatment.

Without at all discussing the merits of governmental regulation of industry, it cannot, in my opinion, ever be satisfactory and permanently successful unless and until it is fair and reasonable and, above everything else, is applied without discrimination. If any man urges legislation that especially favors or punishes any class or division of industry, he should frankly avow that he is after something intended to be contrary to the general spirit of the Constitution of this country.

Legislative enactments or the modification or extension of existing laws for the regulation of industry are being frequently debated in and out of Congress and, personally, I welcome this in so far as it is sincere, unselfish and nonpartisan.

Investigation and publication are proper and desirable, if they are not carried to excess. Constant, partisan, and reckless indulgence in this pastime by representatives of government, or what is much worse, by self-appointed, unqualified, or dishonest individuals or associations, posing as public benefactors, may be and often is misleading and antagonistic to the general welfare.

At other times I have said that occasional investigation of investigators might result in exposure of a good many rascals and I would emphasize the statement.

Often the man crying "stop thief" in the loudest tones has the stolen goods in his pocket. If a man by his manner and methods gives evidence of personal hostility or selfish designs, it is well to scrutinize his conduct and motives before giving credit for his work or placing reliance upon his statements.

There are many vicious bills pending in Congress which bear upon economic progress. They tend to unsettle industry, to induce fear. It is no answer that the fears usually prove groundless.

Even the mere appropriation bills which provide the necessary funds for governmental administration often precipitate trouble and demoralization and occasionally business depression. It is not so much that large expenditures are proposed as it is the spirit generally exhibited. Selfishness, greed, and vindictiveness are displayed. Not infrequently efforts to promote political or personal advancement are strongly in evidence. Many things other than the public welfare are apparent.

It can be said with some positiveness that if we do not have prosperity this year it will be because of agitation and laws, no matter what their altruistic guise, which are directed against the general welfare.

#### *The Effect on Business of the Tariff and European Debts*

Neither the tariff nor the debts owing to us from Europe out of the war will in my opinion have any considerable effect upon business. The tariff is, as always, unsatisfactory, and no satisfactory tariff law will be passed until the two major political parties agree upon the principles of the tariff and take it out of politics. The saving grace of the tariff bill just passed is that its provisions may be modified by the President.

This will work to prevent injustice or profiteering and it is a step in the direction of the appointment of a commission of well paid, high-minded, intelligent, competent, and non-partisan citizens continuously to ascertain the facts on all tariff matters. A thoroughly helpful tariff is one that has no favorites, but looks solely to the fair protection of industry without oppressing consumers.

I do not agree that our own economic position would be better if we forgave the debts owing to us from abroad. We should only be adding to our own burdens. Perhaps if all the debts were paid to us at once and in gold we should have a monetary disturbance, but this is not a danger to which we need give much thought, for there is no possibility that the debts will overnight be paid to us in gold.

I think that the foreign nations can and will pay their debts, some sooner than others and some of them sooner than is now generally expected. We should be willing to extend payments at reasonably low rates of interest and also we should be glad to make new loans whenever we have the confidence that they will be repaid.

Just at this time it is generally recognized that there is a shortage of labor, although now and generally there are considerable numbers of idle men who do not ask for or desire steady work. For various reasons many workmen have returned to their homes in foreign countries.

The shortage in labor, however, has come principally as the result of the percentage immigration laws which have limited the number of workmen who would now come to this country if not prevented by the laws referred to. After some experience these laws are now believed by large numbers to be unreasonable.

Ostensibly, at least, these laws were aimed at the sudden and large increases in the number of foreigners who were

locating here, many of them entertaining views hostile to the ideas of our government.

#### *One of the Most Important Questions Today*

These laws ought to be changed promptly. The restrictions upon immigration should be directed to the question of quality rather than numbers of foreigners coming to this country. Measures for limiting the number of immigrants to those who are clearly shown to be healthy, morally, politically and physically, ought to be clear, strict and enforceable; but the number allowed to come here should be equal to the necessities of our industries.

The administration of the law could be under the control of a competent and impartial governmental commission or department to be managed for the benefit of the general public, and not for the protection of any special class or the exploitation of any impractical or injurious theory. This immigration question is one of the most important now being debated by people throughout the United States.

We undoubtedly need more workers and the wise business man will give attention to seeing that those who work with him are fairly treated and are paid the highest feasible wages on a basis of fitting the wage to the work. Employers who attack labor are not entitled to more consideration than labor that attacks employers. Both are hindrances to prosperity.

If this country is to maintain the economic position in the onward march of nations to which it is entitled, we must have sufficient numbers of competent workmen adequately to supply our industries. To prohibit this would be disastrous, as can be logically demonstrated in a full discussion of the question.

We can prosper only on a fair give and take practice and if the business of the country operates on such a basis there can be no question but that this year holds for us a large and general prosperity.

#### ARCHITECTS AND HOUSE PLAN SERVICE

What is said to be the first definite movement on the part of architects and contractors to combat free service plans of retail lumber dealers has been started by several prominent architects of Indiana organizing what will be known as the Small House Service Bureau, which will specialize in drawing and marketing plans for small house construction.

It is an interesting fact in this connection that the lumber industry has for

many years made a strong feature of house plans and free architectural service for the average home builder. There are many ideas and plan service schemes in operation throughout the country, most all of them through the co-operation of retail lumber dealers. And there is no doubt but what plan books and pictures of homes and floor plan outlines supplemented by blue print drawings have done a lot to promote new home building, and incidentally they have perhaps cut into the field of architectural work proper. In other words, the free plan service of dealers has saved many a home builder from having to employ an architect or other expert service to help him plan his home.

While all this has been going on the clayworking industry has been well enough informed about it and has been slow in taking up with this idea, notwithstanding it is plainly a result bringer, partly because of a desire to work in harmony with the architects, and partly because manufacturers of brick and hollow tile have not in the past taken the same interest in the subject of house plans and home designing that has been manifested by the lumber industry.

There is an open question of whether or not either architects or contractors have any reason or excuse to complain of the enterprise of the lumber folks in this connection. Surely it has not deprived contractors of anything, but has often made more work for carpenters and contractors, who have not manifested enough initiative and enterprise on their own part to stimulate new building like that, that has been done by enterprising lumber dealers in co-operation with manufacturers and their associations who have helped promote these home plan and home building ideas. Protest against things of this kind is protest against enterprise and progress, and the better idea is that which seems to have been started by architects, and that is to get busy and get into the game themselves.

There are many who desire to build small homes and to have something unique and original, yet they do not feel able to afford the services of a high-priced architect. Therefore, if the architects can get together and furnish on a reasonable cost basis plan service that is in keeping with the needs and that will not be considered burdensome in cost, they will not only create business for themselves, but they will help in promoting better home building in the future as well as stimulating more of it.—*The Clay Worker*.

The impractical dreamers are not the architects, but the clients themselves, as a rule.

## CREATING A DESIRE FOR BETTER BUILDING BY ERECTING MODEL HOMES

**E**ARNEST efforts are being made by various groups of builders and different organizations to have better homes, both in design and construction. A rather interesting effort along this line was recently successfully completed at Larchmont Gardens, N. Y. A "Model Home" was erected and this was completed by noon on October 9th and thrown open for public inspection. From October 9th to 15th was "Better Homes Week" in New York, and that is why October 9th was selected for the opening date.

The building industry is receiving a good deal of publicity in various newspapers, magazines, books, etc., all tending to educate the public for the better things for buildings that can be had. More attention is now being paid to conveniences, rather than to mere size and this results in more comfort at less expense.

Sometime ago a design of a house was published in the New York "Tribune" which was furnished by the Home Owners' Service Institute, of New York, having been designed by John Floyd Yewell, architect. The thought then occurred that to build a house as a demonstration of what could be done and keep accurate records of the cost would be something practical and would create quite a good deal of interest among intending home owners. Therefore, with the added co-operation of the Empire Home Building Association, of New York, as builders, the project was started, and brought to a successful finish.

The actual construction of the model house was begun at Larchmont Gardens, New York, on August 1, and on October 11 it was completed in every detail within and without and was ready for immediate occupancy. The house cost complete \$8,842.06, including the builder's profit. The cost of the land and landscaping brought the total cost to \$11,896.32.

For the above amount this model home represented high standards of construction and was what its builders intended that it should be—a home of trimness and stability. It is the proof of its sponsors that the Larchmont Gardens House is as near to perfect as could be obtained for the American small home of today. This house is located at the corner of Harmon Drive and Weaver Street, Larchmont Gardens, New York, within forty minutes' ride of the Grand Central Station in New York.

The design selected won first prize in the recent National Small House Competition. It was also selected by the National Lumber Manufacturers' Association

for exposition in model form at different expositions.

The plan of the model house includes living room, dining room, and kitchen on the first floor and two porches, besides the entry porch. The smaller porch off the dining room can be used as an outside dining room. A convenient arrangement is having the laundry tubs in the back entry. There are two bedrooms of good size on the second floor, together with bathroom and ample closet room.

The house is 20 ft. x 34 ft. 6 in., not including the porches. As built, the cubical contents is 20,322 cu. ft. The architect estimated the cost of construction at \$8,000, and the actual figures come very close to this, which proves the correctness of the estimate.

The house was furnished by several prominent house furnishing establishments of New York. In the actual construction of the house, many well-known advertised building materials were used in its erection and equipment, but everything was bought at regular market price, so as to obtain actual average costs.

When the house was completed, advertisements in different papers called attention to it, and during the first 13 days that the house was open, more than 6,000 people visited it and on the final day of "Better Homes Week" 1,200 people were admitted. The verdict of the thousands who visited the house was that, this interesting experiment in home building was a huge success.

The construction of the house was undertaken to determine the actual present-day building costs and conditions. Mere cheapness of construction was not sought. The thought uppermost in the minds of all co-operating was to obtain the best material at the best price and the whole-hearted co-operation of the various building crafts and dealers to obtain a really good job.

Of course, after the house has served its demonstration purpose it will be sold. Through the same parties co-operating again, the experiment will be repeated a number of times with various designs.

The idea of this educational campaign is to determine the variance in costs of different forms of construction and erection in different localities. By this means, it is believed that a great amount of actual first-hand information for the prospective home builder will be gathered. Of course, through the newspaper sponsoring this idea, detailed accounts of the progress of each house will be published, so as to keep the public interest keyed up. All this will tend to create the desire for better home building.—*Building Age*.

**The man who doesn't advertise, these days, is forgotten. The world is too busy to look up dead ones.**

**Don't be discouraged if you make an occasional mistake; if men didn't there wouldn't need to be any claw on a hammer.**

**The man who doesn't advertise because he can't afford to "do it right" will never reach a position of affluence because everything worth while in the world had to have a beginning, and there can be no "get there" for the fellow who fails to make a start.**

**If your sales-talk is keyed to interest men who build it should occupy space every week in the "Guide," the only building news magazine this side of Manhattan Island.**

**The other day a prominent local architect called up to inquire regarding a concern that has not advertised with us for two years. "I saw their ad. some years ago in the Guide," said the architect, "and am unable to recall just where they are located." We gave him the address and learned subsequently that as a result the firm bagged a big order. How many similar orders, from architects who wouldn't take the trouble to look them up, that same concern has missed in the course of the past two years it would interest us to know.**

**The man who starts out with the idea of getting rich won't succeed; you must have a larger ambition. There is no mystery in business success. If you do each day's task successfully, stay faithfully within the natural operations of commercial law, and keep your head clear, you will come out all right.—John D. Rockefeller.**

**Don't crowd your space, Mr. Advertiser. Better play up one selling point at a time than to try to get everything into one ad. and kill every possible chance for display. An ad. should stand out. It should be easily read. It should draw the attention of the reader. A carload of detail can't be crowded into a few inches of space and still retain the quality of sticking out as all good advertising should.**

**You can't expect to do your "bit" of this busy world's business unless you enlist in the advertising ranks.**

**You owe it to yourself to keep in touch with what is going on in the trade, and you can do this only by becoming a subscriber to and regular reader of your trade paper. If you are not a regular reader of the Builder's Guide you should be. The cost is not excessive. A five-spot insures it fifty-two times in the course of a year.**

**You know what propaganda is, don't you? You know, too, how effective a weapon it is, if used properly, don't you? Well, advertising—honest, fair advertising—is the best propaganda we know of. Join the propagandists now! Advertise in the "Builders' Guide."**

## As The Editor Sees It

THE estimated cost of all buildings, alterations, additions, repairs and miscellaneous work in buildings for which permits were issued by the Philadelphia Bureau of Building Inspection for 1922 was \$114,881,040.00, according to detailed reports printed on other pages of this issue of the GUIDE. The total is almost three times greater than in 1921. Total operations of all kinds amounted to 22,588 as compared to 14,654 in 1921, at a cost of \$42,790,780, making 1922 the greatest year for construction in the history of the city.

Almost 43% of the total value of permits for 1922 was for residences, \$49,273,820 having been expended for this kind of work. Residences of the one, two, three story type, including the frame dwellings, totaled 9,561. This is 7,317 more than were started in 1921, when only 2,244 residences costing \$12,149,110 were begun. \$37,124,710 more was put into residences in 1922 than in 1921.

From 1912, inclusive, to the present, construction was begun on 56,456 houses, costing \$195,520,490. The lowest year was 1918, with 965 houses. In that year, however, there was an embargo on building materials. The total for 1918, \$15,452,670, for all classes of building, only equals the cost of this year's alterations and additions.

The average number of dwellings erected per year in Philadelphia prior to 1917 was 7,150. The average erected

from 1917 to 1920 inclusive was 2,550, which showed a decrease per year of 4,600 houses for the four years, totaling 18,400. With a shortage in 1921 of 4,900 houses, Philadelphia began 1922 with approximately 23,000 short of requirements. With the increase in dwelling construction in 1922, Philadelphia is still approximately 20,000 houses below requirements.

Next to residence construction came in order: Manufactories, \$8,287,510; Office Buildings, \$8,132,990; Schools \$6,701,700; Garages, \$5,072,765; Tenement Houses, \$4,388,500.

March led in the number of new buildings started with 1,643; June, with 1,456, was second, and May followed with 1,227 operations. January, 1922, was the lowest in number of operations started. Every month in 1922 showed marked increase over 1921.

### Estimated Costs For Each Month

Month.	Permits.	Operations.	Estimated Cost.
January .....	634	976	\$4,411,320
February .....	756	1,246	5,381,435
March .....	1,464	2,609	9,210,510
April .....	1,415	2,033	11,136,610
May .....	1,483	2,288	8,872,050
June .....	1,492	2,461	13,190,220
July .....	1,359	1,972	10,531,810
August .....	1,349	2,194	10,945,830
September .....	1,260	2,020	11,714,140
October .....	1,419	2,037	9,876,025
November .....	1,088	1,560	11,416,730
December .....	757	1,192	7,967,360
	14,476	22,588	\$114,654,040

The following table shows the total for each year back to and including 1909:—

Year	Operations	Estimated Cost.
1909 .....	17,294	\$ 42,881,370
1910 .....	16,383	37,866,565
1911 .....	16,215	40,030,985
1912 .....	14,907	37,173,635
1913 .....	14,813	38,763,850
1914 .....	15,709	35,419,605
1915 .....	17,712	39,444,125
1916 .....	15,613	49,896,570
1917 .....	8,977	34,016,408
1918 .....	5,950	15,452,670
1919 .....	14,509	65,088,750
1920 .....	12,512	55,305,400
1921 .....	14,654	42,790,780
1922 .....	22,588	114,881,040

The forty-second ward, with 3,287 dwellings erected in 1922 led all other districts and built three times as many houses as any other district.

The great increase in building in Philadelphia in 1922 is typical of the conditions throughout the country.

Reports of current building operations from all parts of the country warrant an estimate at this time of \$3,828,000,000 as the nation's building record for 1922, says the survey of the general building situation throughout the United States by S. W. Straus & Co. The amount exceeds the total for 1921 or any other year in the nation's history by nearly \$1,000,000,000.

Building for December approximates

**BLUE  
PRINTS**

\$250,000,000 a substantial increase over December, 1921, despite the fact that the last month of 1922 shows a decrease over November of the same year. This loss is due in part to natural seasonal causes, supplemented by transportation congestion. During each month a new record has been established.

There is no indication of any decrease in building costs; on the contrary, conditions point to a continuance of the

present wage scale with a tendency toward higher levels. The shortage of laborers is a subject of considerable importance to employers. The ranks of the skilled mechanics are being reduced to a greater extent than they are being replenished.

To be poor in a wealthy country, to be sick in a good climate, to be inefficient among a progressive people, is a sign of unwise educational methods. Such people were not taught to battle with the world or meet life's emergencies.—Thoreau.

Shipped as dry Crystals, for making Concrete Floors Hard as Iron  
**THE TRUSCON LABORATORIES**

## HARDENED CONCRETE FLOORS DO NOT DUST

It is not necessary to put up with dusting cement floors. Over night a soft cement surface from which the cement dust can easily be scratched with the toe of the shoe—can be transformed into a hard, impenetrable floor that will not "sand" or crumble, even under the hardest foot traffic. Phone or write us for information.

delphia. Owners, St. Patrick's Roman Catholic Church, Rev. J. J. Kent, Brooklyn, N. Y. Brick, slate roof, steam heating, electric lighting, tile and marble work. Architect will be ready for bids in a few days.

## Proposals

### GENERAL ADVERTISEMENT ON THE CONSTRUCTION OF BUILDINGS FOR THE NEW JERSEY SCHOOL FOR THE DEAF, TRENTON JUNCTION, N. J.

Public notice is hereby given that sealed proposals for furnishing labor and materials to construct an addition to the School Building, and Cottage No. 5 with connecting tunnels in the Primary Group; Cottage No. 1 of the Girls' Group and the Transformer House, all as shown on Plot Plan of the School for the Deaf, near Trenton Junction, N. J., will be received and opened by the Architects at the State House, Trenton, N. J., on January 31st, 1923, at two o'clock P. M.

The work for which Proposals are hereby invited covers the complete construction of an addition to the School Building, Cottage No. 5, and connecting tunnels in Primary Group, Cottage No. 1 of the Girls' Group, and Transformer House, including Plumbing, Electrical Work, Heating and Ventilating, and Drainage, all ready for movable equipment.

Bids will be received for the work under four separate contracts, as follows:

1. For General Construction of entire group of buildings consisting of the addition to the School Building, and Cottage No. 5 of the Primary Group, Cottage No. 1 of Girls' Group, and Transformer House.

2. For Plumbing work for entire group of buildings as above.

3. For the Electrical work for the entire group of buildings as above.

4. For the Heating work for the entire group of buildings as above, except Transformer House.

The right is reserved to accept or reject any or all Proposals, or to waive any informality in any Bid presented. All Bids must be in sealed envelopes endorsed, "Proposal for New Jersey School for the Deaf," and stating the branch of work covered. No Bid will be considered unless accompanied by a certified check to the order of the State of New Jersey, in the amount of five per cent. of the Bid, or Bid Bond in the like amount, binding the Bidder to execute a contract if awarded to him. The terms of Proposal with surety required are fixed by the Specifications.

Copies of the Drawings and Specifications will be on file at the office of the Architects for the purpose of estimating. A limited number of copies of the Plans and Specifications will be loaned to the prospective bidders on deposit of certified check to their order in the sum of Fifty Dollars (\$50). These plans may be obtained by application to Arnold H. Moses, Architect, Temple Building, 415 Market Street, Camden, New Jersey. If Plans and Specifications are returned on or before the submission of estimates the check will be returned, but should the Plans and Specifications be not returned, the deposit may become forfeited.

GUILBERT & BETELLE,  
ARNOLD H. MOSES,  
Associated Architects.

Dated January 9, 1923.

## Failures Come in Minutes

—it takes time to build success

You have built a successful business,  
a factory, a home—after years of  
effort. You cannot afford to lose  
all through a single misfortune.  
An hour's fire—a flash of lightning—  
an explosion—Your success may turn  
to failure in a moment's time.

No success is safe unless insured.

## As The Editor Sees It

THE experiment in the training of apprentices in the Building Trades will be of great interest during the ensuing year. Already the GUIDE has explained the plan inaugurated by the New York Congress, and methods employed in other localities. Further information concerning this work is found in the *American Contractor*. Says this paper:

Akron, Ohio, has a plumbing class of twenty apprentices who study four hours each week under the terms of the Smith-Hughes law. This group was formed in September, 1921. The progress has been splendid. Two classes of fifteen students each are now being taught plan reading and estimating at night classes. Two evenings a week are devoted to this instruction.

Most of the plan reading and estimating students are employed in contractors', engineers' and architects' offices. Their ages vary from 18 to 30 years. Mr. Waterhouse, director of trade extension, seems most willing to do everything possible to further apprenticeship training and continuation school work, but the local condition of the building industry has not been such as to allow any great expansion of the educational program. As soon as a revival in local building occurs more classes will be started.

In Binghamton, N. Y., numbers of apprentices were indentured in all trades in which mechanics were needed, and training classes for supplementary work

were inaugurated during May, 1922. The building trades unions co-operated in every way with the committee of the builders' exchange in the formation of these classes and the placing of the boys on the job.

They agreed also to accept as full fledged craftsmen every apprentice that could pass the test of qualification for the journeymen mechanics regardless of how quickly they were able to finish their training. Poster advertising was used to arouse public and industrial interest, and a committee was placed in charge to see that a square deal was given to apprentices and contractors concerned with the apprenticeship drive.

Buffalo, N. Y., has reported that one large concern in that city engaged in masonry construction work had not hired a union man in over thirty years but employed a large number of apprentices who kept the market fairly well supplied. No other training has been attempted according to our informant.

In Chicago there were a number of continuing schools operating under the direction of the school board, but no adequate effort was ever made to utilize them for building trades apprenticeship training purposes. On June 29, 1922, the Chicago Citizens' Committee to Enforce the Landis Award opened a plumbing class to aid men already at work at the trade to advance themselves in their craft.

On September 28, 1922, the Citizens' Committee opened a new school with a program along conventional continuation school lines for the supplementary training of apprentices. Classes in plumbing sheet metal work, carpentry, painting and decorating were organized and apprentices placed at work with Chicago contractors. This school was not placed under the Smith-Hughes law at its inception but may seek finances from that source later on.

Also the Joint Arbitration Board of the Associated Builders of Chicago and Local No. 1 of the Bricklayers' Union co-operated in starting a school for the preliminary training of apprentices in that trade.

In the fall of 1911 the bricklayers' union, Local 21 of Illinois, started a supplemental training school for apprentices that has been in operation ever since. Apprentice boys who are learning the trade, whether they are actually at work or not, go to this school one night each week and take up plan reading, drawing, the bonds of brickwork and an occasional lesson in practical work.

At present there are about a hundred and fifty apprentices attending the classes. The boys do not get paid for the time they put in at the school, but attendance is compulsory upon them by rule of the union. Owing to lack of an employment agency to maintain employment for students at all times, and be-

cause contractors have been backward in volunteering such employment, it has been hard to keep the boys in the trade. Many have dropped out for months at a time, but have returned whenever conditions allowed them to do so, and since its inception, the school has done splendid work in helping them become better mechanics than they would have been without the supplementary training.

Several hundred apprentices now have been given preliminary training in the apprenticeship classes of Chicago and have been placed on the job to finish their apprentice training. They return to classes for four hours each week to receive additional instruction in theory and subjects related to their crafts. Night classes are being run to aid journeymen to extend their knowledge of various crafts. These night classes are largely occupied with plan reading, layout work, and advanced studies such as will aid men seeking a foremanship.

The Associated Building Contractors of Illinois with state headquarters in Chicago, have prepared to start a big apprenticeship training campaign of a statewide character. As a first step in such action a school for foremen will convene in Chicago in January, 1923. Later, apprentices will be indentured throughout the State, and some form of continuation school training will be installed through the co-operation of the division of vocational training of the Illinois department of education.

For two or three years Cincinnati has been developing the continuation school system under the Smith-Hughes law until it has one of the best organized industrial training courses in the country handled directly by the public school authorities. The building trades have been introduced into the curriculum only during the latter part of the history of this school, but splendid work has so far been accomplished.

Large classes in sheet metal work exist and smaller ones in other trades are already formed. Many local contractors are doing the best they can to push the work of the continuation school and are employing as great a number of apprentices as they can efficiently use; but greater co-operation by all contractors of the city has been urged.

In Cleveland some of the finest classes in bricklaying that have been organized in the country are enrolled in a continuation school which is operated under the Smith-Hughes law. Contractors and representatives of the union compose a committee that directs the apprenticeship training, and that has rendered a great service to the industry in the splendid manner in which it has brought the number of apprentices up to that of the capacity of the industry to furnish them employment. There is in

Cleveland, too, a plumbers' school which also operates under the provision of the Smith-Hughes law. About thirty-five apprentices are taking the training at the plumbers' school, while 165 bricklaying apprentices are enrolled.

A school for the instruction of electrical mechanics, operating on a basis not connected with the Smith-Hughes law, also exists in Cleveland and is a feature of several years standing in the electrical industry there. It is operated jointly by the union and the contractors. Recently a movement was launched to bring this school under the terms of the Smith-Hughes law as it is felt that greater satisfaction for the money expended can be secured.

Other schools have been contemplated but as yet none has actually been launched. A school for plasterers is needed badly together with a drive for the indenturing of apprentices, but local organization difficulties have prevented any action thus far.

At Detroit the Cass Technical High School was used for special classes in the building trades. The classes were established June 1, 1922. Boys were placed in shops as apprentices by members of the Associated Building Employers of Detroit at wages of 30 cents an hour. Schooling was planned as supplementary to the actual shop work. Results have not been entirely satisfactory to the contractors, and plans for putting more energy into the training of apprentices are being made.

At Fresno, Cal., the builders' exchange has launched a drive to start a plasterers' school. Funds have been raised and are now available. The school is expected to start with a full class of plastering apprentices.

Grand Rapids, Mich., organized classes in bricklaying during October, 1922. There are now thirty-six men in the evening classes which meet from 7 to 9.30 P. M. A class of about ten men to meet from 4 to 6.30 P. M. has been organized, and another class to meet from 1 to 4 P. M. is in process of formation.

The Los Angeles Board of Education, with the approval of the Chamber of Commerce, has started three classes in bricklaying. Materials have been furnished free of charge by public spirited business men and no tuition is asked from the students. A night class for those at work during the day aids them to further their skill. At the present time the plan is to run the courses for six months.

Oakland, Cal., started a bricklayers' school under the supervision of the Alameda County Builders' Exchange. First classes were held during the latter part of June. The school was planned to operate as a preparatory training school

# TRUSCON Agatex HARDENER

BOOKLET ON REQUEST  
*Shipped as dry Crystals, for making Concrete Floors Hard as Iron*  
**THE TRUSCON LABORATORIES —**

## HARDENED CONCRETE FLOORS DO NOT DUST

It is not necessary to put up with dusting cement floors. Over night a soft cement surface from which the cement dust can easily be scratched with the toe of the shoe—can be transformed into a hard, impenetrable floor that will not "sand" or crumble, even under the hardest foot traffic. Phone or write us for information.

Phila. Office,  
 1432 South Penn Sq.

## Proposals

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., January 18, 1923. Sealed Proposals will be opened in this office at 3 P. M., February 15, 1923, for furnishing and installing laundry machinery at the U. S. Veterans' Hospital, Chelsea, N. Y. Specifications may be obtained at this office or at the office of the Superintendent of Construction, at Chelsea, N. Y., in the discretion of the Supervising Architect. Proposals will be considered only from individuals or firms, or corporations possessing satisfactory financial and technical ability, equipment, and organization to insure speedy completion of the contract, and who have established a record for expedition on contracts of similar character and magnitude. The fact that any concern obtains a set of the plans and specifications from any source whatever and submits a bid shall not constitute a waiver of the foregoing stipulations. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., Jan. 17, 1923. Sealed Proposals will be opened in this office at 3 P. M., February 7, 1923, for the Mechanical Equipment (exclusive of outside services, elevators, lighting fixtures and certain equipment) of the Administration Building and Mess Hall and Kitchen Building, at the U. S. Veterans' Hospital, Chelsea, N. Y. Specifications may be obtained at this office in the discretion of the Supervising Architect. Proposals will be considered only from individuals, firms or corporations possessing satisfactory financial and technical ability, equipment and organization to insure speedy completion of the contract, and who have established a record for expedition on contracts of similar character and magnitude. The fact that any concern obtains a set of the plans and specifications from any source whatever and submits a bid shall not constitute a waiver of the foregoing stipulations. Jas. A. Wetmore, Acting Supervising Architect.

Treasury Department, Supervising Architect's Office, Washington, D. C., January 20, 1923.—SEALED PROPOSALS will be opened in this office at 3 P. M., February 14, 1923, for an ice making and refrigerating plant at the U. S. Veterans' Hospital, Chelsea, N. Y. Specifications may be obtained at this office in the discretion of the Supervising Architect. Proposals will be considered only from individuals, firms or corporations possessing satisfactory financial and technical ability, equipment, and organization to insure speedy completion of the contract, and who have established a record for expedition on contracts of similar character and magnitude. The fact that any concern obtaining a set of plans and specifications from any source whatever and submits a bid shall not constitute a waiver of the foregoing stipulation. Jas. A. Wetmore, Acting Supervising Architect.

### GENERAL ADVERTISEMENT ON THE CONSTRUCTION OF BUILDINGS FOR THE NEW JERSEY SCHOOL FOR THE DEAF, TRENTON JUNCTION, N. J.

Public notice is hereby given that sealed proposals for furnishing labor and materials to construct an addition to the School Building, and Cottage No. 5 with connecting tunnels in the Primary Group; Cottage No. 1 of

the Girls' Group and the Transformer House, all as shown on Plot Plan of the School for the Deaf, near Trenton Junction, N. J., will be received and opened by the Architects at the State House, Trenton, N. J., on January 31st, 1923, at two o'clock P. M.

The work for which Proposals are hereby invited covers the complete construction of an addition to the School Building, Cottage No. 5, and connecting tunnels in Primary Group, Cottage No. 1 of the Girls' Group, and Transformer House, including Plumbing, Electrical Work, Heating and Ventilating, and Drainage, all ready for movable equipment.

Bids will be received for the work under four separate contracts, as follows:

1. For General Construction of entire group of buildings consisting of the addition to the School Building, and Cottage No. 5 of the Primary Group, Cottage No. 1 of Girls' Group, and Transformer House.
2. For Plumbing work for entire group of buildings as above.
3. For the Electrical work for the entire group of buildings as above.
4. For the Heating work for the entire group of buildings as above, except Transformer House.

The right is reserved to accept or reject any or all Proposals, or to waive any informality in any Bid presented. All Bids must be in sealed envelopes endorsed, "Proposal for New Jersey School for the Deaf," and stating the branch of work covered. No Bid will be considered unless accompanied by a certified check to the order of the State of New Jersey, in the amount of five per cent. of the Bid, or Bid Bond in the like amount, binding the Bidder to execute a contract if awarded to him. The terms of Proposal with surety required are fixed by the Specifications.

Copies of the Drawings and Specifications will be on file at the office of the Architects for the purpose of estimating. A limited number of copies of the Plans and Specifications will be loaned to the prospective bidders on deposit of certified check to their order in the sum of Fifty Dollars (\$50). These plans may be obtained by application to Arnold H. Moses, Architect, Temple Building, 415 Market Street, Camden, New Jersey. If Plans and Specifications are returned on or before the submission of estimates the check will be returned, but should the Plans and Specifications be not returned, the deposit may become forfeited.

GUILBERT & BETELLE,  
ARNOLD H. MOSES,  
Associated Architects.

Dated January 9, 1923.

(Continued from page 52)

which would give boys between the age of 18 and 22 years a chance to learn the rudiments of the trade. Each graduate from the school was guaranteed a job as a bricklayer.

The State of Massachusetts has passed some very liberal laws which encourage the schooling of apprentices. In several trades students may be employed to work directly on commercial buildings without being indentured to employers. While the construction industry has taken advantage of the situation only in a very limited way, the supplementary training courses of the Massachusetts

Institute of Technology and several technical high schools in the state have aided in the production of skilled workmen in some of the building trades. What is needed is a more aggressive plan for utilizing the training courses that today are only being taken by a very few.

Milwaukee has for years been perfecting a continuation school system that is now in a position to aid in the training of any apprentice group in industry. Not only are indentured boys taught the theory of their trades and related subjects but youngsters that are not sure which trade they wish to choose for their life work are aided in making a choice. In addition to this big continuation school program there is a Boys' Technical high school that furnishes instruction, along different lines, to electrical workers, carpenters, cabinet makers and plumbers in the building trades. This school attempts to duplicate within the institution the conditions of the job. It is a practice distinctly different from the method used by the bigger continuation school, which seeks rather to co-operate with bona fide contractors and give supplementary training to apprentices actually at work in the trades.

Minneapolis together with its twin city, St. Paul, established a bricklayers' school in March, 1921. This school is supervised and financed by contractors and employers and is not run in connection with the public school system. The unions have not sanctioned its operation and give it no co-operation whatever. Methods used in teaching are to combine job work with theoretical training and school practices.

A tuition fee of \$25 is charged but this is refunded if the apprentice attends 75 per cent. of his classes. The course seeks to give students the rudiments of the bricklaying trade so that they may go out to work on the actual construction jobs, where they complete and perfect their knowledge and skill.

Six months is the extent of the course planned. About 150 men have been put through the school since it was started. It is estimated that 400 bricklayers are still needed in the community. There is also in Minneapolis a privately endowed industrial school known as the William Hood Dunwoody Institute that has carried courses in carpentry, building construction, drafting and estimating for several years.

These courses have been of service both to young boys who later entered into an apprenticeship, to apprentices who attended night school there, and to journeymen that desired to perfect their knowledge of the craft they had chosen.

From the nature of the work done no strictly craft lines were observed in the teaching except in the carpentry classes. In November, 1922, however, a class in

plumbing was organized which included twenty-five apprentices, and which was started in co-operation with the Minneapolis Retail Plumbers' Association. Students while employed as apprentices by master plumbers of the city attend continuation school at Dunwoody Institute. A second class is now in process of formation. All enrolled students will be paid for the time of their attendance as in the usual continuation school method.

At New Orleans the Delgado Central Trades School, an endowed institution presented to the city of New Orleans and operated under the control of board of managers appointed by the mayor, opened its doors in August, 1921. Six building trades are being taught. Methods used are not those of the continuation school,—the students are instructed throughout by teachers and do not work directly on the jobs of contractors. It is aimed to give them in three years the instruction equivalent of a four year apprenticeship. Considerable time is devoted to supplementary education also.

In Philadelphia the Industrial Relations Committee of the Chamber of Commerce has carried on considerable preparatory and educational work preliminary to the establishing of apprenticeship training systems. A plastering school is being planned, and will be functioning early in the year.

Pittsburgh has been educated through the Builders' Bulletin to the need for training craftsmen and made acquainted with the agencies in the city that can aid in the work. The Carnegie Institute of Technology offers to any apprentice or student a training course which will supplement his apprentice work, increase his knowledge of his craft, and allow speedier development of skill.

It teaches, in addition to this supplementary work, plumbing, carpentry, bricklaying, sheet metal working, electric wiring, structural drafting, building trades drafting, heating and ventilating, concrete work, masonry practise, plan reading and estimating. The Ralston Industrial School, operating under the Smith-Hughes law, also furnishes instruction to apprentices in the wood working and electrical trades.

At the Latimer Junior high school courses in wood working, electric wiring and sheet metal work are given under the Smith-Hughes law. These schools are ready to handle as large a number of boys as may be employed in any of the building trades. They can train them in a manner that will bring immediate results if a system of co-ordinating employment service with school attendance is furnished by the employers.

Little has been done as yet in an organized way. The splendid work of the Builders' Bulletin in educating the

members of the exchange to the possibilities for co-operative effort is one bright feature of the Pittsburgh situation. Big constructive work is looked for from this section in the near future.

Salt Lake City, Utah, started a bricklaying class at the West Side high school of that city during September, 1922. The course now comprises half day sessions at the school each week day. Afternoons and evenings are spent on the jobs of various contractors and material concerns which provide employment for the students while they are going to school. Practical trowel handling and construction work is taught in the school, besides plan reading, drawing and the theories of the bonds of brickwork. A practical contractor is instructing the class, and while it is small compared with the needs of the community, progress has been satisfactory and the school may be expanded during the near future.

San Francisco started a school for the training of plasterers in May, 1922. This is the first, and so far as has been reported, the only school for the training of plasterers in this country. Not only is no tuition fee charged, but all married men who take the course are paid \$2.50 a day. A twelve weeks' course turns out a man capable of doing rough plastering work, and these graduates are taken on to the job where they are taught other details of the trade.

Advanced plastering is also a feature of the school and ornamental and fancy work is taken up for the benefit of graduates and journeymen plasterers who desire to enlarge their knowledge of the craft.

Within a few days of the starting of the plastering school a plumbing school was launched. Plumbing apprentices go to school only part of the time after finishing their preliminary two weeks of intensive training. Other crafts are to be taken up by the Industrial Association, and schools will probably be started in tile setting and lathing in the near future.

St. Louis has a privately endowed school, known as the David Rankin, Jr., School of Mechanical Trades, which gives instruction in carpentry, plumbing, painting and decorating. The courses call for two years' attendance and take all the time of the student. There are also night school classes which furnish continuation instruction for apprentices who desire it. Special preliminary and advanced courses of one year each also are provided.

A tuition fee of \$45 a year is charged for the regular courses. No plan of co-operation has been worked out by either the contractors or the unions in regard to using the school to greater advantage in the present shortage of mechanics.

St. Paul schools are operated together with the training schools of Minneapolis.

Youngstown, Ohio, has laid a foundation for splendid co-operation between the school authorities and the construction industry. Because of local conditions of stagnation in building, however, no progress has been made in extending the field of training outside of the plumbers' school which was established in 1921 and which has been most successful. The system used is that of a continuation school. Students attend classes while employed on jobs. Training will probably be extended to other trades when local building starts with increased volume.

At Tuskegee, Ala., the Tuskegee Institute has established a class for the training of bricklayers. This school is conducted for the benefit of colored people, and a large class has been enrolled in the bricklaying trade. The course covers three years and is intended to cover all phases of the work.

This is an imposing list of schools. The majority of them have been started only within the year, and those previously in existence have had most advantage taken of them only during this late period. Much work remains to be done in this field. It is worse than unfortunate that only one city has attempted to start a plastering school. San Francisco stands alone in this respect, though, as stated, Philadelphia and Fresno, Cal., are each preparing to establish one. But ten thousand plasterers are needed in the industry by next spring. If we don't start training them soon we will not have them ready by spring four years from now.

The continuation school system, which allows the apprentice to earn wages at his trade and at the same time learn as much of the theory and the clerical end of the craft as he can readily assimilate, seems to be the most popular among both the contractors and the apprentices and journeymen. There is no end of opportunities for training apprentices. It is up to the contractors of the country to take advantage of them. The Smith-Hughes law stands ready to guarantee finances for any bona fide training effort.

Vocational training schools have seldom been used to capacity and little has been done in most places to get contractors to co-operate with such institutions and unite in pushing a unified apprenticeship training drive. We look for greater progress on a national scale during 1923 than has been evidenced in 1922. The outlook is encouraging, though our efforts still fall far behind our needs.

You can't expect to do your "bit" of this busy world's business unless you enlist in the advertising ranks.

## STRIKES BLAMED FOR HIGH COSTS AND EXCESSIVE RENTS

In an advertisement published in local newspapers not long ago the American Plan Association attributes the high cost of building and the consequent high rentals to "strikes and restricted production due to closed shop conditions." This statement may—in a measure—be justified. Strikes and "restricted production" may add something to the cost of building but just what proportion of the increased cost can be fairly chargeable to these admitted nuisances is a question which neither the American Plan Association, nor anyone else, can answer with any degree of accuracy. Other items of cost that enter into building construction can be more easily gotten at; the tremendous increases in these other items in recent years are unquestionably more to blame for the present high prices of buildings than are strikes or restrictions on production. So if anyone is really solicitous concerning the burdens placed upon the public by reason of increased costs and rentals, why not start with something that is tangible and can be definitely proven. We are thoroughly agreed that a closed shop condition is not especially conducive to cheap construction but we deem it scarcely fair to place all of the blame for high prices and high rentals on labor unions.

Take, for example, the cost of financing building operations. This is a matter that can be readily investigated by anyone desirous of ascertaining definite causes of increase in cost. Numerous buildings about Cleveland, some in course of construction, some just finished and some not quite started would furnish good evidence. It would not be a surprise to many who are familiar with conditions if it were found that from one-tenth to one-fifth of the entire cost of the building was absorbed as a charge for the use of the money. In a few cases it probably would be even higher than we state. How many building projects are attempted nowadays without recourse to first, second and third mortgages—or bond issues—to secure the money necessary to erect the structures? And what is the entire cost to the owner of the money thus secured? What proportion of the increased cost of a building is directly chargeable to financing in cases where banking institutions, mortgage companies, realty companies and construction companies are all mixed up in the same operation? And doesn't the cost of this financing add to the investment in the project just as though it were that much money spent for lumber, brick, steel or any other material entering into the construction? Or for the labor necessary to fabricate the various materials?

We have heard for years the continuous

complaint of the terrific increases in the price of labor and materials in the building business; this industry, it would appear, has been singled out for especial condemnation. Perhaps it's because the achievements of the industry are so obvious. Every one can see a building being erected—most every one at some time or another has a desire to own a building. Buildings are necessary. Other things, however, are almost quite as necessary and have increased in cost just as much. Do we hear so much about them? No, there is apparently a desire to soft-pedal the sad news.

In the building trades there is a scarcity of labor and, in recent times, a scarcity of materials. Isn't it quite natural that both should increase in cost? Costs have increased in other business where the conditions are quite the reverse. It's not long ago that we were told that hides were so numerous they were being burned—or buried—or in some manner destroyed—but did anyone notice any appreciable decline in the tremendous prices we were paying for shoes? Neither did we. Newspapers doubled their price and it's still doubled. Telephone rates jumped sky-high. Meats, eggs, milk, cream, candy, ice cream, collars, gloves, advertising rates, dentists' and doctors' fees, auto licenses, police court costs, hair-cuts, shaves, funeral notices, caskets, rough-boxes, grave-digging—most everything you can imagine—added much to the cost of living and the expense of dying. But do you hear the incessant clamor of complaint about these? No—everyone's picking on the building business; somebody started the fashion and it's become quite a fad.

The high wages paid in the building trades in the larger cities of the country are not due entirely to strikes. Here in Cleveland building mechanics are being paid rates greatly in excess of what they demanded when strikes occurred or were threatened early in last year. In some trades where no strikes occurred and there was a peaceable settlement of the wage question, wages are higher than either the union officials or the employers contemplated. This is undoubtedly because the number of men available is not sufficient to supply the demand created by the big building program. The scarcity of men is oftentimes charged to the restrictions of unions as to the number of apprentices that may be employed. This is only partially true. During the past few years it has been extremely difficult to secure apprentices—not primarily because of opposition on the part of unions but rather because of economic conditions. Young men were in such demand in other lines of endeavor that few could be induced to learn the building trades. Were there no restrictions at all concerning apprentices we

would not be a great deal better off than we are. This condition is being remedied now and some of the unions are a much greater factor in remedying it than any other agency.

A lessening of production always accompanies a scarcity of help—just as higher wages go hand in hand with a demand for labor. This is true of every industry, and conditions in this respect in the building business are no worse than in shops, factories, stores or offices when business is big and help scarce.

The advertisement of the American Plan Association before referred to makes the further statement that "The chief breeder of strikes \* \* is the closed shop." This is unquestionably true. A "strike" in an "open" shop is a rarity.—*Building Industry.*

The BUILDERS' GUIDE is in its thirty-eighth year of continuous publication.

The man with an order to place doesn't hunt you up in the city directory these days. He hasn't the time. If he can't find you in your trade magazine he can and does find somebody else, and that somebody else books the order.

"Facts are stubborn things." Advertise only the truth about your product and watch the result.

Advertising is telling who you are, where you are, and what you have to offer the world in the way of service or commodity.

If nobody knows who you are, or what you have to offer, you do no business, and the world is the loser through giving you absent treatment.

Life is too short for the consumer to employ detectives to ferret out merchants who have the necessities of life to sell.

Man and the giraffe are the only two living things that can't swim naturally. Throw a day-old kitten into the Mississippi and it will paddle its way to shore. The giraffe can't swim because he's not built that way. Man can't swim, just because he is afraid. The chances are that the reason you are not in the swim—financially or otherwise—is because you are afraid.—Glen Buck.

A certain wall-board man advertised in the Guide for awhile and then dropped out. We've had a dozen inquiries since then, asking for his address—every inquiry from a cash buyer. This is a common occurrence. It's hard to make some advertisers see the vital importance of a standing "ad."

Business is founded on reciprocity and co-operation. Any other plan than this spells bankruptcy. The successful business nowadays has a heart and a soul.

## Failures Come in Minutes

—it takes time to build success

You have built a successful business,  
a factory, a home—after years of  
effort. You cannot afford to lose  
all through a single misfortune.  
An hour's fire—a flash of lightning—  
an explosion—Your success may turn  
to failure in a moment's time.

No success is safe unless insured.

## As The Editor Sees It

### THE TASK AHEAD FOR BUILDING

BY FRANKLIN D. ROOSEVELT

*President, American Construction Council*

**“W**HAT are the great major industries upon which the wealth and the stability of the nation are founded?”

Put that question to the first ten laymen you meet. I venture the prediction that nine of the ten, in their answers, will omit the second greatest industry. They will include agriculture, manufacturing, transportation and communication, mining and lumber.

One of the greatest creators of permanent wealth, as well as one of the foundation stones upon which the industrial structure of our country is built, is the construction industry. It is second only to agriculture—viewed from the standpoint of the yearly volume of dollars involved—and is really entitled to rank first when measured by the number of men who are dependent upon the industry for a livelihood. Basing the figures upon a careful survey, it is, I believe, safe to say that the number of workers who, together with their families, depend upon the construction industry for a livelihood, totals more than eleven million persons, or about 10 per cent. of the population of the United States.

There are times when even the Federal Government does not seem fully to ap-

preciate the importance of the Construction industry. When the Interstate Commerce Commission recently issued its ruling No. 23 allocating freight cars to the coal industry primarily with a view to the nation's warmth this winter, more than 3,000 protests were made. One of them was from the construction industry. Under the order, only 18,000 cars would have been available for the execution of a construction program estimated to be \$15,000,000,000 in arrears; and it was shown to the commission that such a ruling would imperil the well-being of millions of workers and tend greatly to increase the army of unemployed during the winter months.

As a result of this protest the order was so amended as to allot 34,000 additional cars to construction activities. But even this total of 52,000 cars was only one-third the number actually required.

That was the first time in history that the number of cars needed by the construction industry ever had been computed. Yet the figures were vital in a great national crisis, and certainly it is reasonable to suppose that, in addition to the Interstate Commerce Commissioners, the men who manufacture transportation equipment are interested in them, no less than thousands of others actually engaged in any of the numerous professions and businesses which go to make up the construction industry.

Not long ago a questionnaire was sent

to twelve leading banks. One of the questions asked was what percentage of the credit funds for 1923 would be devoted to the construction industry. Not one of the bankers could answer the question, although bankers are an intelligent and alert lot of men. They had never thought of construction as an industry, as they had thought of agriculture or manufacturing. They had thought of it as an assemblage—a loose assemblage—of industries, a hodge-podge, not as a unit. And there was good reason for their thinking so. Its component parts were scattered, their work sometimes overlapped, and the industry as a whole was in a semi-chaotic condition.

The American Construction Council was formed to unify the industry, not only in public and official thought, but in its actual operation. It is to supply both a laboratory and a hospital service, and one of its first laboratory tasks will be the accumulation of data such as I have described. Its organization came as a result of a natural economic demand, and construction is the first great industry to take the step. The nearest approach to it is the effort to co-ordinate the principle factors in the motion-picture industry. The council will embrace not only architects, engineers, contractors, material and equipment manufacturers and dealers, bond, insurance and real estate interests and the principal construction departments of public utilities,

but officials of municipal, state and federal construction departments.

When the council was organized last June, Herbert Hoover, who presided, said:

"It is a step I have long looked for—advocated during the past year. We have made some attempts to secure solution, and I do believe that in bringing all the elements of the construction industry here to see whether or not joint action can be secured, you are taking one of the most important steps ever taken in the history of this nation."

John M. Gries, chief of the Housing Division of Mr. Hoover's department, has said, in speaking of the lack of unity among the members of the industry:

"Now when they have begun to see more clearly that they all have many interests in common, that conditions favoring active construction favor all, and that a sound construction industry is of the highest public interest, the situation is improving. The giant has awakened. He now knows that his arms and his legs are a part of him. He knows that no matter which member is injured, he suffers. With this awakening we will see great improvements in the industry."

These are inspiring utterances because they betoken official recognition of the important task the council has undertaken; and Mr. Gries, when he spoke of the fact that an injured arm or leg hurts the whole industry, touched upon the hospital service which must be part of the council's work. We may say, for instance, that one of the allied branches of the industry—it perhaps would be unfair to be more specific—is suffering just now from a broken leg. It has lost public confidence. Just after the World War, we will say, it was found guilty of practices which the council today would not tolerate. As a result of these practices, corporations, and individuals who were thinking of building hesitated or postponed their improvements until a later date. Naturally, the whole industry was made to suffer.

This particular branch of the industry that I am using as an illustration has tried home remedies. It has tried to mend its broken leg, but it was not successful. We are hopeful, however, that the hospital service supplied by the council may be more effective. The council can collect statistics covering the entire nation which the associations representing the allied branches of the industry cannot collect, because the council will serve merely in an advisory (and to some extent disciplinary) capacity. It will be just what it is called—a council, not a new trade association. It can appoint a commission to make an impartial inquiry into conditions in the various branches of the industry or any one particular branch, and its report to the pub-

lic will carry a weight which the protestations of reform of any particular unit of the industry cannot have.

In this connection it may not be amiss to call attention to a clause in the by-laws of the council:

The council shall not concern itself with problems that distinctively come within the province of a particular group except such as may be detrimental to the general welfare of the construction industry and the public.

If it be true that a law should be the natural outgrowth of the conscience of the community it affects, it is no less true that rules governing the conduct of the construction industry must well forth from the conscience of the whole membership from the sub-contractor to the most distinguished architect. It is only so that the code of ethics can be enforced, and one of your early duties will be the formulation of such a code. Another important step will be the establishment of an apprenticeship system, which will serve a two-fold purpose: It will tend to offset the national shortage of trained men in the allied branches in the industry, and at the same time to give the young men who enter the constructive industry crafts a pride in their work and a desire to have their sons follow in their footsteps.

This, after all, is the heart of the American Construction Council movement—that its ills shall be cured, its abuses eliminated, not by governmental and court action but by voluntary work of the industry itself. It is this that marks the movement as one of the big forward steps in American industrial organization. And it was just such a policy that Herbert Hoover undoubtedly had in mind when, in his very able address before the organization meeting of the council last June, he said, "You are taking one of the most important steps ever taken in the history of this nation." Only recently, the Attorney General of the United States, in an authorized interview in *The Nation's Business*, said: "Business has a conscience; business as a whole is inherently honest."

Those affiliated with this movement are fully in accord with Mr. Daugherty in this respect, and it is our desire to translate into action what the Attorney General has put into words. It is our desire and our aim to bring together the many component parts which make up the industry and carefully to analyze their common problems looking toward a better understanding of them and towards a satisfactory solution of these problems. In other words, it is my desire and the desire of these responsible for the organization of this movement that the construction industry work out its own salvation. In doing this, of course, a tremendous amount of work naturally falls

## HARDENED CONCRETE FLOORS DO NOT DUST

It is not necessary to put up with dusting cement floors. Over night a soft cement surface from which the cement dust can easily be scratched with the toe of the shoe—can be transformed into a hard, impenetrable floor that will not "sand" or crumble, even under the hardest foot traffic. Phone or write us for information.

## Proposals

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., January 22, 1923. Sealed Proposals will be opened in this office at 3 P. M., February 15, 1923, for the installation complete of one full magnet electric freight elevator, for the United States Custom House and Post Office at Buffalo, N. Y. Drawings and specifications may be obtained at this office in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., January 25, 1923. Sealed Proposals will be opened in this office at 3 P. M., February 26, 1923, for the furnishing and installing of certain Kitchen Equipment in Infirmary-Group (4 buildings) at the United States Veterans' Hospital, Chelsea, N. Y. Specifications may be obtained at this office in the discretion of the Supervising Architect. Proposals will be considered only from individuals, firms, or corporations possessing satisfactory financial and technical ability, equipment, and organization to insure speedy completion of the contract, and who have established a record for expedition on contracts of similar character and magnitude. The fact that any concern obtain a set of the plans and specifications from any source whatever and submits a bid shall not constitute a waiver of the foregoing stipulations. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., January 27, 1923. Sealed Proposals will be opened in this office at 3 P. M., February 26, 1923, for alterations in the U. S. Veterans' Hospital, at the Bronx, New York. Drawings and specifications may be obtained from the Superintendent of Construction on the site, or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

(Continued from page 68)

to the council. No phase of the inter-relations between the industry's branches and its contact with the public is outside the scope of the council's activities.

When the public is once brought to realize that an industry, which embraces in its membership 250 national associations, stands as a unit back of a guarantee of integrity, efficiency and public service, the public will deal with the various branches of this industry with as much confidence as it now deals with the banks or other businesses that are conducted with certain well-defined codes of ethics, even though those codes may never have been formulated into words or actually reduced to writing.

I may indicate certain other pressing problems which confront the council briefly as follows:

A national study of building codes, with a view to a standard practice, not through a country-wide legislative campaign, but through recommendations to those engaged in the construction industry.

A stabilization of the construction industry to mitigate the evils of seasonal employment and labor migration. It is possible, for instance, to bring about a change from the present rental situation in large cities, where a majority of the tenants who are seeking new locations move on the same day of the year, putting an immense burden upon the decorating and transfer workers, making their wages for the time being unduly high and their employment acutely seasonal, with a higher rental for the tenant. It would relieve this situation to arrange leases so that business houses and apartment houses would be vacated, for instance, at different times. The fixed moving date must also be taken into consideration in connection with house building. In awarding contracts owners must always take into consideration the renting season date. This often makes it necessary for contractors to work in double shifts, paying workmen bonuses to work during the night in order to complete such buildings in time for occupancy on the fixed moving date. These are but two illustrations of a large problem.

### What Construction Needs

A revision of existing freight rates on construction materials. This, I take it, is likely to come somewhat later than the other changes I have referred to, although I do not regard it on that account as of less importance.

A standard system of cost accounting. Water-power development.

Federal aid to states in highway construction.

A standard form of contracts.

I must not be understood as saying that the American Construction Council will

undertake the settlement of all these questions at the outset. On the contrary, it will devote its attention at the first only to those three or four problems which are of pressing importance and which are of such a nature that we can begin work on them straightway. That is to say, we must have a certain agreement of opinion on them, and in regard to some of them an educational effort must be made before differences now apparent can be ironed out.

The tendency of unrelated or loosely related branches of the industry to go ahead in ignorance of what other branches were doing, without a sense of co-operative responsibility and without due regard for the welfare of the public, must be overcome first if we are to win that public confidence which is essential to a full restoration of construction activity. The lack of mutual understanding and of respect for the owner's interests has been especially evident during the last few years, but I am confident that it can be cured. The industry fell back last year, but each of the 250 national associations involved is anxious to help meet the problems which extend beyond their special fields. Each is anxious to help the council eliminate duplication and waste. Of that I am confident. And of course a less wasteful, more efficient construction industry will mean lower building costs, lower rentals and, in the long run, a saving all along the line.

Although the council was organized last June, so as to have a machine ready for operation, it has only now begun functioning. It is too early to be more precise as to what is in immediate prospect, and too early to form a judgment as to what may be accomplished within, say, the next six months. I am certain that there is an immense usefulness ahead of the organization.

It is to be regretted that in certain quarters I have been described as occupying, in relation to the construction industry, the same autocratic power ascribed to Mr. Hayes in the motion-picture industry and to Judge Landis in organized baseball. Beneficent as the activities of those gentlemen may be, and as I do not doubt that they are, their authority, if it is czar-like, far exceeds my own. I have accepted the presidency of the American Construction Council, and in that capacity expect to exert no greater power than the president of any other business organization. I am persuaded that the construction industry does not require a czar and would be ill-disposed to tolerate tyranny. It needs only an opportunity for co-operation and the machinery of what I have ascribed as laboratory and hospital service. Now that these are provided, the industry and the public may well look hopefully into the face of the future.

*The Nation's Business.*

## HOW ARE THE BUILDING TRADES TRAINING APPRENTICES?

BY FRANK L. GLYNN

*Managing Director, New York Building Congress*

The fact that Europe has ceased to be the training school for the United States has brought about an acute situation in the building industry which is being reflected in all the basic industries contributing to a finished structure from the mining of the coal to the manufacture of hardware, tile, glass, electric fixtures, heating apparatus and the hundred and one necessities upon which a contractor is dependent.

This situation is due to the neglect on the part of the building industry to perpetuate itself by providing means for training skilled labor. It is particularly unfortunate that this neglect has only begun to be realized at a time when the demand for building is at its highest peak, with indications that this peak will be maintained for some time to come provided there is enough labor to do the building. Nor has the responsibility for the discouragement of building trade apprentices rested all with the unions. Employers in the past have put obstacles in the way of apprentices getting ahead. As long as young men were apprentices they got apprentice wages. The more they learned the more would be the wages and it was not to the interest of the employer to enlarge his payroll.

*The Wisconsin Law*—The only apprenticeship law now in force in the United States is in Wisconsin, which, for more than six years, has provided for apprenticeship contracts under the administration of the State Industrial Commission. These contracts embody the signatures of the parties to the contract, the date of beginning apprenticeship, the period of its duration, the processes or particulars of the trades to be taught and practiced, the wages to be paid and any other special arrangements customary in the trade.

The law requires, furthermore, that the apprentice shall attend an apprenticeship school for supplementary trade instruction five hours per week on the employer's time where such schools are established. It is required by law that such schools shall be established in all cities of more than 5,000 and may be established in smaller cities. These schools are supported entirely by public funds. They are designed to give academic trade instruction to the boy as well as to afford him trade experience in the shop.

Penalties are provided for violation of the contract which will involve a fine of from \$1 to \$100 for either party; in addition, the regular penalties follow for the violation of the orders of the Industrial

Commission which have the same standing as any other orders of that commission.

But despite the slowness of the building industry throughout the country to arise to the needs of this situation, it has now come to realize the necessity for far reaching and fundamental changes. The need of more apprentices in the building trades has become so obvious that, in many cities throughout the country there are being worked out definite programs for the training of mechanics. This plan is well under way in New York, Boston, Chicago, San Francisco, Philadelphia, Cleveland and Portland, Ore., and is in process of development in Detroit and St. Louis.

*The New York Plan*—In New York, to take a specific case, the administration of the plan is in the hands of the Apprenticeship Commission of the New York Building Congress and already it has been applied to two of the trades. The program is outlined as follows by Stephen F. Voorhees, president of the congress:

We have been giving our attention to the shortage of skilled labor in the building industry for the past year, and have worked out a plan in entire co-operation with all the elements of the industry including architects, realtors, engineers, contractors, materials manufacturers, bankers and organized labor. We have worked together until now we have a going commission in charge of providing opportunity for the young men of this locality to learn the skill required by mechanics in the building business. Formerly we were able to draw on Europe for our skilled workers. This has now stopped and we must make them. The basic idea is close co-ordination with the public school system both in offering an opportunity for graduate students to enter the industry and to provide the necessary technical instruction that goes with our development and is a vital part of it.

The plan in force in New York provides for a four-year apprenticeship during which practical daily work is supplemented by evening instruction under the supervision of the public school administration. The training comprises five and one half 8-hour working days per week continuously and four hours evening instruction weekly for a period of 38 to 40 weeks per year. The New York City Board of Education has made a specific appropriation of \$20,000 for this work during the fiscal year 1922-1923. The Apprenticeship Commission places the apprentices through co-operation with the placement department of the public schools and with the employers, and exercises a continuing supervision in order to insure that the boy keeps up with his studies and that the employer gives

him the graded work necessary for his training.

*How Agreements Are Made*—The apprenticeship agreements are negotiated by conferences between the commission and joint trade committees composed of representatives of the trades unions and the employers. The commission itself consists of five representatives of the building trades union, five employers, and three neutrals who are interested in building construction but who are non-partisan as between the unions and the employers. In all the conferences with the various trades, this commission represents the congress, but each of the trades has its own joint trade committee. When satisfactory standards of apprenticeship have been drawn up, they are ratified by the joint trade committee and incorporated in the trade agreements.

The ratio of apprentices in each trade is determined as a result of an exhaustive study of seasonal employees in the building industry in the metropolitan district, in the course of which 93,000 cases were studied for each year of a ten-year period. This is a matter of the utmost importance, for an essential feature of the apprenticeship plan is continuity of employment, which could not be realized if the number of apprentices were excessive. This difficulty is accentuated in the building trades because of its seasonal nature. Although it is planned to allow four years in which to bring the plan into full operation, the ratios in each case have been based upon 50 per cent of the lowest rate of employment, thereby allowing for a falling out of about half of those that start.

*A Specific Case*—As an example of how this plan works out in a specific case, the apprentice ratio for the painting and decorating trades for the first year has been placed at 140 apprentices to a total of 8,000 journeymen. The apprentices must be between 16 and 21 years of age and are required to put in a probationary period embodying the first two weeks of employment. Advanced credit is allowed to apprentices for previous trade experience or for work in an approved school subject to rating by the joint apprenticeship committee of the trade.

The wages of an apprentice are for his first year 33 1/3 per cent of the beginning journeymen's wage, for the second year 44 4/9 per cent., for the third year 55 5/9 per cent. for the fourth year 72 2/9 per cent. For the time spent in the school the employer allows the apprentice one-half the regular hourly wage rate. Apprentices who do not keep up their school work are subject to discharge by their employers and to exclusion from membership in the unions.

The subjects taught in the schools include related mathematics, trade sketching and drawing, shop practice, related

science and general information. In his work, the apprentice is taught the processes and the care and use of the tools used in the painting and decorating trade.

*The Industry Supports the Plan*—Both employers and trades unions are loyally supporting this plan, as they have been brought face to face with the necessity for bringing young men into the trade and for giving them a thorough training in order to maintain the high degree of skill established by the industry, which heretofore has depended more or less upon skilled workers coming from European countries and has neglected the training of the younger workers.

In the last few years intensive training, vestibule schools, etc., have been turning out specialized workers who are able to do some particular jobs, but these workers do not know the relation of their work to the finished product. Experience has proved that these so-called quick methods of training workers have failed to produce trained mechanics.

A trained mechanic is a man who has had practice, experience and instruction in the various processes of the trade. He knows the various processes of the trade the relation of one process to another and to the finished product. He can perform his work with an economy of material, a high degree of accuracy and in a minimum period of time. These factors of experience are accomplished by the co-ordination of the hand, the eye and the brain, and the proper functioning of these factors is only brought about by well directed apprentice training.

Employers are in favor of apprentice training as they know a trained mechanic is an asset to the industry. He earns the wages he receives, he goes about his work in a business-like way without the necessity of a highly paid foreman telling him every few minutes what to do and how to do it. He can stand on his own feet. Organized labor is in favor of a well-directed apprenticeship plan as well-trained workers can maintain wages commensurate with the quality and quantity of work performed. Such workers take a pride in their work and raise the standard of their trade to a higher plane whereby the craft has the respect of the community. The public favors well-trained workers because it knows that when work is performed by trained journeymen, it receives full value for money expended.

This is essentially the apprentice problem in one of the great building trades. As the workers go up the ladder a round a year and leave the ladder altogether after the thirtieth round, new men should be mounting behind them. But at the present rate of apprenticeship replacement those lower rounds are soon going to be empty, and before very many years have passed only a few of the upper

rounds will be occupied.—*Engineering-News Record*.

#### FIFTEEN MILLION PEOPLE LIVE IN ZONED CITIES

**M**ORE than 15,000,000 people live in zoned cities, towns and villages, according to information made public by the Division of Building and Housing of the Department of Commerce. Computations show that the homes of 27% of the total urban population of the country are located in zoned municipalities, and it follows that most of these homes are protected from intrusion of garages, stores, warehouses or manufacturing plants.

Zoning regulations provide, by a neighborly kind of agreement, that a city or town shall be divided into districts in which the uses for which structures may be built, their maximum height, and the area of the lot which they may cover, are established. In line with the zoning plan, certain districts are set aside for residences, for apartment houses, for office buildings, and for manufacturing. Ample provision is made for normal growth of business and industrial districts, but the builder of a garage or factory is not allowed to erect it within a residential neighborhood regardless of the annoyance and money losses inflicted on surrounding home owners.

The Department's investigation shows that in 1922 zoning spread especially rapidly in smaller places. Fourteen towns with five to ten thousand inhabitants were zoned during the year, bringing the total zoned towns in this class to twenty-three. Twelve places with 5,000 inhabitants or less were added to the list in 1922, bringing the total in that class to seventeen. The percentage of large cities which have already zoned remains much greater, of course, and of the fifty largest cities in the country, twenty-two have zoning ordinances in effect.

In the entire country, 109 cities, towns and villages were zoned on January 1, 1923, as compared with 55 just one year before.

New York, the largest city in the country, has been zoned since 1916, and in contrast, the smallest zoned community had only 131 inhabitants according to the 1920 census. Eighty-one per cent. of the urban population of New York State lives in zoned municipalities. California ranks second among the states with 71% of her urban population zoned; Minnesota, third, with 58%; New Jersey, fourth, with 57%; and Utah, fifth, with 55%. The entire District of Columbia is zoned.

In number of places zoned, New Jersey leads with 31; New York is second with 17; California, third, with 14; Illi-

nois, fourth, with 10; Ohio, fifth, with 9; and Massachusetts and Wisconsin follow with six each.

The complete list of zoned municipalities, as of January 1, 1923, with references to the state acts under which zoning is permitted, may be obtained from the Division of Building and Housing of the Department of Commerce, which also has available for distribution such pamphlets as "A Zoning Primer," explaining in popular style the elements of zoning, and "A Standard State Zoning Enabling Act," a model act for the assistance of states in preparing laws permitting city zoning.

All advertising pays—even that which is poorly constructed. A bad ad. is better than no ad. at all. It is worth all that it costs in the competitive world of the present day, merely to keep one's name where the possible buyer cannot help seeing it. To be out of sight in the commercial world is to be out of mind.

Many a man would do a better job if he didn't know about putty.—*Ex.*

Don't be a Rip Van Winkle. Advertise and let everybody know you are awake and abreast of the times.

America stands supreme in the development and use of advertising, and advertising is the seed which by implanting desire produces the fruit of social advancement. Education promotes efficiency and efficiency in turn makes possible higher earning power, higher purchasing power and improved living conditions.

That plan of the king in olden times who killed the messenger who brought him bad news has my approval. Blessed are those who bring glad tidings! If you cannot write a good letter—don't!—*Elbert Hubbard*.

When you stop to consider that the Guide reaches every week and is read by architects, builders, building owners, contractors and sub-bidders in every branch of building construction, you must perceive its unique importance as a medium for advertising with an appeal to that class. Every copy reaches a live prospect.

I make it a rule never to write a grouchy letter—I telephone.

To be poor in a wealthy country, to be sick in a good climate, to be inefficient among a progressive people, is a sign of unwise educational methods. Such people were not taught to battle with the world or meet life's emergencies.—*Thoreau*.

Don't be discouraged if you make an occasional mistake; if men didn't there wouldn't need to be any claw on a hammer.

## What 131 Years Mean to You

**T**IME weakens an individual but strengthens an institution. This is definitely and importantly true of insurance organizations.

In selecting an insurance policy remember that a policy protected by 131 years of Company history is a double safeguard. "The oldest American Fire and Marine Insurance Company" puts behind its every policy a record of 131 years of met obligations.

A North America policy is a wise protection.

## As The Editor Sees It

The annual banquet of the Builders' Exchange & Employers' Association held at the Manufacturer's Club, Thursday, February 1st, was beyond doubt the best "get together" meeting of the Builders' Exchange held in Philadelphia for many years.

There were many more present at this banquet than at any other meeting ever held by the Exchange, and the affair was conducted in a dignified and enjoyable manner.

Mr. Thomas F. Armstrong, Chairman of the Entertainment Committee, is to be congratulated on the extreme care and thoroughness with which he directed this annual banquet.

The first speaker, the Honorable J. Hampton Moore, Mayor of Philadelphia, gave an interesting resume of the activities of the present administration, and outlined some of the vexing problems that will confront the next candidates for Mayor and for Council. The Mayor paid a very high tribute to the work of the builders in Philadelphia, and to the building profession in general, emphasizing the fact that the work of the builders is permanent.

Following Mayor Moore, Fletcher W. Stites, prominent member of the Philadelphia bar and State Senator from Montgomery County, Penna., gave a very illuminating talk which contained very sound doctrine intermingled with unusual wit. Mr. Stites' talk was so good that

many of his hearers afterward questioned the sincerity of it because it was so idealistic. The sincerity of the address, however cannot be questioned by anyone who is familiar with the upright, straightforward, clean-cut methods followed by Mr. Stites.

The last speaker was the inimitable Edward J. Cattell who is known and loved not only by Philadelphians, but by everyone who has heard him throughout the country. Mr. Cattell as usual was full of very interesting and humorous stories. Mr. Cattell combined with his humor some serious thought, as is his custom, and made some very important suggestions which if followed by the building trades will result in great harmony throughout the organization.

Mr. Joseph M. Steel, President of the Exchange, was unable to be present, but a letter written to the members of the Exchange was read by the Toastmaster, Mr. Armstrong, directing the attention of the building trades to the wonderful opportunities for real service that exist and exhorting the members of the building fraternity to work harmoniously with the idea of promoting the welfare of the public as well as the building trades in general.

You can't expect to do your "bit" of this busy world's business unless you enlist in the advertising ranks.

### CHEAPER AND BETTER HOUSES OBJECT OF COMMERCE DE- PARTMENT REPORT

Cheaper and more durable dwellings for the American people is the object of a report made public by the Building Code Committee of the Department of Commerce, and characterized by Secretary Hoover as having "a value far beyond any similar work undertaken to date."

The Committee has included not only the minimum requirements which it believes should be enforced by cities in their building codes for all one and two-family houses, but also an Appendix discussing good practice in small house construction. In this way the 100 page printed report not only serves the primary purpose of presenting a model ordinance which cities may adopt, but is a useful guide to all who are interested in knowing where to save and where to spend in order to obtain a safe, substantial and durable house at a minimum cost. Thirty illustrations are included to explain the text.

In a letter of acknowledgement addressed to Mr. Ira H. Woolson, chairman of the Building Code Committee, Secretary Hoover states:

"I am confident that the generous and voluntary contribution of time and energy which you and your colleagues have given to this work will result not only in a very appreciable money saving to millions of American families, but that it will have a

PRINTS**

positive influence toward better housing that can not be counted in dollars.

"This report has been built up by co-operation of the Government and the public, which I feel will appeal to everyone. The Committee itself represents the great voluntary organizations most interested in public service in this direction, but beyond this you have consulted with many other associations and you have submitted the report in its preliminary form to over 900 municipal officials, architects, engineers, officials of trade associations, and incorporated their criticisms into its final form. I believe this method of intellectual legislation is unique and gives the report a value far beyond any similar work undertaken to date.

"I join with you in the belief that it will be helpful not only through practical use by municipalities in building codes and in promoting greater uniformity in codes throughout the country, but that with its appendix it will prove directly useful to owners and builders of dwellings generally.\* \*"

The report is believed to represent by all odds the most thorough investigation that has yet been made of the engineering and practical side of house building. This subject has never before received even a small part of the expert study that should be due it and hence millions of our small houses have been built with needless waste of some materials, yet with neglect of simple precautions necessary for comfort and durability.

The committee of eminent men making this report includes representatives of the principal architectural, engineering and other interested professional societies and was constituted as follows:

Ira H. Woolson, Chairman, Consulting Engineer, National Board of Fire Underwriters, New York, N. Y.; Edwin H. Brown, Architect, Minneapolis, Minnesota; William K. Hatt, Professor of Civil Engineering, Purdue University, Lafayette, Ind.; Rudolph P. Miller, formerly Superintendent of Buildings, New York, N. Y.; John A. Newlin, in charge of section of timber mechanics, U. S. Forest Products Laboratory, Madison, Wis.; Ernest J. Russell, Architect, St. Louis, Mo.; and Joseph R. Worcester, Consulting Engineer, Boston, Mass.

The work was initiated and the committee was appointed by Secretary Hoover on account of the fact that building codes and builders frequently fail to recognize modern methods of construction, thus adding to building costs and retarding construction activity.

This first report of the committee deals with the construction of one and two-family houses of masonry, concrete and frame types, the latter including veneer and stucco. The value of such construction in the United States amounted to well over a billion dollars in 1922. It is ex-

pected that general adoption of the code, with consequent modification of present unjust and wasteful requirements, will result in substantial conservation of materials, and the saving of many millions of dollars.

The committee recommends that building codes permit eight-inch solid brick, and six-inch solid concrete walls, for 2½ and 3 story dwellings accommodating not more than two families each. Only about forty per cent. of the present city building codes investigated permit eight-inch walls in such dwellings. Eight-inch walls of hollow building tile, hollow concrete block or hollow walls of brick are permissible, but may not exceed 20 feet in height with an additional 5 feet to the peak of the gable. Frame construction would be limited to 2½ stories under the recommendations of the committee.

Metal lath and plaster on wood studs properly firestopped is approved for party and division walls, but at least every alternate wall in row houses must be 8-inch solid brick or concrete, or 12-inch hollow masonry.

Requirements for quality of hollow masonry units agree fairly well with present practice, but those for brick are somewhat below the medium grade established by the American Society for Testing Materials. The report recommends revised working stresses for timber used in dwellings, based on investigations of the U. S. Forest Products Laboratory. For other materials experimental work of the Bureau of Standards was freely drawn on.

Live loads to be required as bases for design are 40 pounds per square foot for floors of wood, and 30 pounds for monolithic floors or those of solid or ribbed slabs. Foundation walls of brick are required to be 12 inches thick for excavated enclosures, and similar concrete walls shall be as thick as the walls they support, but not less than 8 inches. Special hollow building tile 12 inches thick is permitted for foundation walls of frame buildings.

In addition to the requirements in the code itself, the appendix contains a mass of valuable information on the quality of materials which should be used for good results. This Section includes tables showing safe sizes of floor joists and girders, a discussion on protecting lumber against decay, an analysis of methods to be followed to avoid cracking of plaster, and advice on furring the inside of masonry walls.

The discussion of built-in garages, both in the code and the appendix, is regarded as particularly valuable in view of their comparative novelty and their relation to fire hazards. The report is full and explicit on this point. Proper methods of chimney construction and of fire-stopping

## HARDENED CONCRETE FLOORS DO NOT DUST

It is not necessary to put up with dusting cement floors. Over night a soft cement surface from which the cement dust can easily be scratched with the toe of the shoe—can be transformed into a hard, impenetrable floor that will not “sand” or crumble, even under the hardest foot traffic. Phone or write us for information.

Owners taking bids due February 10th.

**Factory**, West Reading, Pa. Architect, H. G. Mohn, Mohnton, Pa. Owner, J. Biehl, Biehl Wagon & Auto Works, 31 South Fifth street, Reading, Pa. Brick, steel, 2 stories, 85x200 feet, slag roof, pine floors, rolled steel sash, electric light. Owner taking bids due as soon as possible.

**School Building**, Broomall, Delaware County, Pa. Architect, Henry L. Reinhold, Jr., 1513 Walnut street, Philadelphia. Own-

ers, School District of Marple Township, care of secretary, S. A. D. Lyon, Broomall, Pa. Brick and stone, 2 stories, 62x74 feet. Owners taking bids due February 20th at noon. Plans may be secured from architect's office. Deposit, \$25.00. Refund, \$10.00.

**School Building**, Green Tree, Delaware County, Pa. Architect, Henry L. Reinhold, Jr., 1513 Walnut street, Philadelphia. Owners, School District of Willistown Township, Delaware County, Pa., care of Secretary Sydney L. Roberts, Malvern, Pa. Plans may be secured from architect's office. Deposit, \$25.00. Refund, \$10.00. Owners taking bids due February 19th at noon.

**Store**, Lansford, Pa. Architect, F. A. Muhlenberg, Liberty Trust Building, Reading, Pa. Owners, J. C. Bright Co., Lansford, Pa. Brick, limestone, 2 stories, 70x170 feet, slag roof, hardwood floors, steam heat, electric light, store fixtures. Architect will be ready for bids February 8th, due February 24th.

**Residences (36)**, South side of Chester pike, East of State road, Bywood, Pa. Architect, private plans. Owner, J. D. Fisher, 5414 Thompson street, Philadelphia. Frame and stone, 2½ stories, 16x18 feet, wing 20x15 feet, Rex shingle roof, oak floors, hot water heating, electric lighting, tile work. Owner will build.

**Church (alts. and add.)**, Tamaqua, Pa. Architect, G. C. Freeman, Liberty Bank Building, Reading, Pa. Owners, St. Jerome's Roman Catholic Church, Rev. H. Baker, Tamaqua, Pa. Stone, 1 story and basement, 20x60 feet, composition roof, hardwood and concrete floors, steam heat, electric light, tile work, stained glass, exterior plastering, decorating. Architect will sub-let.

**Residence**, Narberth, Pa. Architect, private plans. Owner, A. R. Sleath, Forrest avenue, Narberth, Pa. Hollow tile and stucco, 2 stories, 40x25 feet, hot water heating, electric lighting. J. H. Hinkle Co., 326 South Twenty-fourth street, taking sub-bids due February 18th.

**Bungalow**, Fort Washington, Pa. Architect, Samuel D. Milner, 1117 Foulkrod street, Philadelphia. Owner, Rev. M. F. Dumstrey, care of architect. Frame and stucco, 1½ stories, shingle roof, hardwood floors, hot air heating, electric lighting. Architect will build.

**Residences (4)**, St. Davids, Pa. Architect, John Charles Norton, Ardmore, Pa. Owner, Henry Silvert, Bryn Mawr, Pa. Stone, brick and stucco, 2½ stories, 26x38 feet, shingle roof, hardwood floors, hot water heating, electric lighting, tile work. Owner is taking sub-bids.

**Peabody High School**, Margarett, Beatty and Highland avenue, Pittsburgh, Pa. Architect, Edward B. Lee, Chamber of Commerce Building, Pittsburgh. Owners, Board of Education, George W. Gerwig, secretary, Office of the Superintendent, Fulton Building, Pittsburgh, Pa. Brick, reinforced concrete, cut stone and steel, 2 stories and basement, 302x61 feet and 148x24 feet, composition roof, linotile, cement and maple floors, hollow tile, elevators, safety treads, metal weather strips, waterproofing, terra cotta, iron work, bond, kalamein doors, rolled steel sash, tile, marble and terrazzo work, metal lath. Lowest bidders: P. H. Kelly Const. Co., 1713 Sansom street, Philadelphia, \$559,750; Pittsburgh Eng. Co., Pittsburgh, Pa., \$568,306.

**Residences (4)**, North Derry street, Harrisburg, Pa. Architect, F. G. Fahnestock, Patriot Building, Harrisburg, Pa. Owner, Dr. J. H. Kreider, 1416 Derry street, Harrisburg, Pa. Cinder block and stucco, 2 stories. Preliminary plans in progress.

**Office**, Duncannon, Pa. Architects, Lawrie, Green & Co., Commonwealth Building, Harrisburg. Owner, P. F. Duncan, Duncannon, Pa. Brick, 1 story, 30x50 feet. Preliminary plans in progress.

**Apartment Building (alts.)**, 40 South North street, Harrisburg. Architects, Johnston & Starr, Spooner Building, Harrisburg, Pa. Owner, Charles Goodman, 109 North Second street, Harrisburg, Pa. Brick, 3 stories. Plans in progress.

**Residence (alts.)**, North Front street, Harrisburg, Pa., \$10,000. Architect, C. H. Lloyd, Telegraph Building, Harrisburg, Pa. Owner, J. W. Pomraning, Kunkel Building, Harrisburg, Pa. General interior and exterior alterations. Plans in progress.

**Residence and Garage**, Second street, Harrisburg, Pa. Architect, C. H. Lloyd, Telegraph Building, Harrisburg, Pa. Owner, S. W. Shoemaker, 421 Walnut street, Harrisburg, Pa. Brick, 2½ stories. Plans in progress.

**Studio and Residence (alts.)**, Carlisle, Pa. Architect, F. G. Fahnestock, Patriot Building, Harrisburg, Pa. Owner, Norman G. Guth, 46 West High street, Carlisle, Pa. Brick, 1 story, 25x30 feet, asphalt roof, hardwood floors, general interior alterations. Plans in progress.

**Bank (add. and alts.)**, Williamstown, Pa., \$40,000. Architects, Lawrie, Green & Co., Commonwealth Building, Harrisburg. Owners, Williams Valley Park, care of architects. Brick, 2 stories, general interior alterations, tile and marble work, vault, bank fixtures. Plans in progress.

**School**, Troy, Pa. Architects, Lawrie, Green & Co., Commonwealth Building, Harrisburg. Owners, Troy School Board, W. R. Croman, secretary, Troy, Pa. Brick, 2 stories, 265x110 feet, slate roof, hardwood and cement floors, steam heat, electric light, metal lath, hollow tile, safety treads, roof ventilators, skylights, waterproofing and dampproofing, iron stairs, ornamental iron work. Owners will be ready for bids February 6th, due March 5th.

**Moose Temple**, Third and Boas streets, Harrisburg, Pa., \$150,000. Architect, C. J. Lappley, Cotterel-Ebner Building, Harrisburg. Owners, Loyal Order of Moose, No. 107, J. A. Searfauss, 220 Boas street, Harrisburg, Pa. Granite, 3 stories, 47x155 feet, composition roof, hardwood floors, concrete floors (heating, plumbing and electric work reserved), roof ventilators, terra cotta, ornamental iron work. Architect will be ready for bids February 8th or 9th.

**High School**, Enola, Pa., \$50,000. Architect, C. J. Lappley, Cotterel-Ebner Building, Harrisburg, Pa. Owners, East Pennsboro Township School Board, Mr. Hoffman, secretary, Enola, Pa. Brick, 2 stories, 37x115 feet, 42x92 feet, composition roof, pine floors, hot air heat, electric light, hollow tile, metal lath, safety treads, roof ventilators, skylights. Owners taking bids due February 16th.

**Residences**, Nos. 1, 2 and 3, Radnor, Pa. Architect, Louis F. Adams, 1701 Chestnut street, Philadelphia. Owner, Oswald Chew, Commercial Trust Building, Philadelphia. Stone and stucco, 2½ stories, 53x30 feet,

## PUBLIC SALES

We have purchased 122,000 pairs U. S. Army Munson last shoes, sizes 5½ to 12, which was the entire surplus stock of one of the largest U. S. Government shoe contractors.

This shoe is guaranteed one hundred per cent. solid leather, color dark tan, bellows tongue, dirt and waterproof. The actual value of this shoe is \$6.00. Owing to this tremendous buy, we can offer same to the public at \$2.95.

Send correct size. Pay postman on delivery or send money order. If shoes are not as represented we will cheerfully refund your money promptly upon request.

## Delaware Construction News

**Store Building**, 929 Market street, Wilmington, Del. Architect, John A. McKibbin, Industrial Trust Building, Wilmington. Owners, Delaware Avenue Realty Co., Wilmington, Del. Steel, 1 story, 20x117 feet, composition roof, sliding door hangers, wire glass skylights, electric lighting. Plans in progress.

**Consolidated School**, Dover, Del. Architect, William Heyl Thompson, 1211 Walnut street, Philadelphia. Owners, Dover Special School District, Dover, Del. Brick, concrete, precast and cut stone and steel, 2 stories, 224x80 feet, slate and slag roof, cement and maple floors, metal lath, safety treads, waterproofing, iron work, bond, kalamein doors, rolled steel skylights, steam heating. Contract awarded to Barnes & McLaughlin, 17 South Seventeenth street, Philadelphia, but not yet signed.

**Residence (alts.)**, Cooch Bridge, Wilmington, Del. Architect, E. C. May, Dupont Building, Wilmington, Del. Owner, Edward W. Cooch, Wilmington, Del. New partitions, hardwood floors, general interior alterations. Contract awarded to Pearson & Benjamin, Marshallton, Del.

**Factory (alts. and add.)**, Wilmington, Del., \$10,900. Architects, Brown & Whiteside, Dupont Building, Wilmington, Del. Owners, Speakman Co., 816 Tatnall street, Wilmington, Del. Stone and brick, 2 stories, 65x80 feet, slag roof, wood floors, steam heat, general alterations. Contract awarded to W. D. Haddock & Co., 804 Orange street, Wilmington, Del.

**Residence**, Seventeenth and Riverside streets, Wilmington, Del., \$18,000. Architect, C. R. Hope, Dupont Building, Wilmington, Del. Owner, Achille Recerd, care of architect. Brick, 2½ stories, 42½x34½ feet, slate roof, hardwood floors, steam heat, electric light, tile work. Contract awarded to E. L. Johnson, 131 Clayton street, Wilmington, Del.

By an oversight the Keystone telephone number of the Iona Ventilator Co. was omitted from the *Directory of Architectural and Builders' Trades* on Page 66, under the heading of Skylight, Cornices and Ventilator Manufacturers. We suggest for the convenience of our subscribers that Park 3589 be inserted therein.

### Proposals

**TREASURY DEPARTMENT**, Supervising Architect's Office, Washington, D. C., January 29, 1923. Sealed Proposals will be opened in this office at 3 P. M., February 27, 1923, for painting and papering at the United States Public Health Service Hospital, Norfolk, Va., in accordance with the specification, copies of which may be had at this office or from the Superintendent of Construction on the site, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

An old legend tells of a magician's vase; the magician could get out of it only that which he put in. Advertising is just that. If you don't get into it the "kick" of salesmanship it is going to miss by just that much the pulling power it ought to have.

(Continued from Page 84)

are also treated. A number of valuable references are given to easily obtainable pamphlets dealing with special points.

The report may be obtained from the Superintendent of Documents, Washington, for 15 cents a copy.

### SEASONAL EMPLOYMENT IN BUILDING

BY D. KNICKERBACKER BOYD

*Architect and Structural Standardist,  
President, Philadelphia Building  
Congress*

More possible working days are lost by workers in the building "trades" than by those in almost any other industry. The year's work is literally "shot to pieces" by intermittency due to unemployment, not only from seasonal causes, which for the most part could be overcome, but from other causes many of which are

related. Among them is (1) indoor work so often unnecessarily required to be done in warm weather and in a crowded construction period when it could be deferred till colder weather and a lowered employment period; (2) demolition not being started until the time of the year that the new construction which replaces the old should itself be under way; (3) lack of foresight in ordering or assembling materials or fabricated products in advance of construction needs; (4) delays in closing contracts with sub-contractors (sometimes unfortunately due to the other unfair practice of "shopping" for lower estimates.)

Two of the most potent causes for lack of employment in localities subject to varying degrees of cold and possible inclemencies of the weather, say in Dec. January, February and March, are: (1) the psychological attitude of the building public towards starting anything in advance of this period of the year due to lack of concerted effort on the part of

Tile Setters' Helpers .....	0	52	6	281	217	64
Building Laborers .....	0	52	6	281	217	64

*Note*—Plasterers, painters and paper hangers have a 40-hour week the year round; no Saturday work. Stonemasons, bricklayers and carpenters have a full day off on Saturdays in July and August and Saturdays before Labor Day. Plumbers have a full day off on Saturdays of June, July, August and September; half-days on Saturdays the balance of the year. Iron workers have full days off on Saturdays of June, July and August. All other trades work 44-hour week, 8-hour day, 4 hours on Saturday the year round, except building laborers, who work 50-hour week, 9-hour days and 5 hours on Saturday. On some work the building laborers do not have Saturday half-days off. The 52 Sundays have been eliminated. Recognized holidays are considered as falling on other than Saturdays.

the contractors in each locality to convince themselves and the public through foresight and practical demonstration that construction can be advantageously carried forward by overcoming climatic handicaps; (2) the failure of employers, workers and others interested, to settle definitely, not later than say October 1, the scale of wages which will prevail for all the building trades in that locality on and after the beginning of the next calendar year and throughout the year.

And while we are speaking of scales it would be interesting to see if all manufacturers and dealers in each locality would settle upon prices at which deliveries would be made throughout the year instead of by the operation. With the knowledge of all costs fixed in the minds of investors and building owners in October for the next fifteen months, winter construction would become very popular with all those desiring to avoid the "spring rush." Thus would year-round construction become an economic accomplishment.

There are several things which must be done toward eliminating the great unemployment waste in the building and construction industry. Let us consider three of them in the following order:

1. Secure results through studies as to the effect of weather conditions on various kinds of buildings under construction so that intermittency of employment due to the interference of the elements could be promptly and co-operatively prevented by the promotion of better methods and management to decrease all such as could properly be overcome by the reasonable use of commercially possible precautions.

2. Secure the co-operation of building owners, managers, and tenants in bringing about a more equitable distribution of requirements in maintenance, alterations and equipment in existing buildings as distinguished from new construction so that the wasteful effects of intermittent employment could be greatly reduced as a corollary of seasonal occupation.

3. Inform the public in no uncertain way as to the nature, extent and costliness of the unemployment waste. Through this means and demonstrations as above to secure the co-operation of public, corporate and private ownerships in a sensible distribution of their new construction requirements in each region.

Individual contractors, aside from large regionally distributed construction concerns which are already realizing some of the possibilities, cannot without public appreciation and support cope with the first of these alone and building owners should not be greatly criticized for failure to co-ordinate their maintenance work with low employment periods because the building construction industry as a whole has until very recently been sadly neglected by those constituting its component groups. The "readiness to serve" bur-

den of expense, due to waiting for public recognition of construction needs, has been allowed to grow to present bounds with little or no check. At last the public has become aroused to the high cost of construction for which it, in itself, is in a large measure responsible.

The existing pronounced shortage of building workers has at last caused recognition of the fact that their ranks have been decreasing for years past to an alarming extent. This in the face of increasing demands for their service and constantly rising wages has brought with it a realization that something is wrong, and that steps must be taken to recruit the ranks.

The usual procedure has been to establish courses for training apprentices which while apparently a wise move has not succeeded as it should. There are several reasons for this, the most potent being that present mechanics discourage young men from entering the crafts, as I prefer to call them rather than trades, because of the lost time which apparently accentuates the hazards and hardships.

Many young men, none too anxious to take up manual labor, especially outdoors, heed such advice without seeking inspiration for entering a calling in which they do not appreciate the possibilities for individual expression through real craftsmanship, nor comprehend the joy of achievement in what can be, and should be, an art and not a mere job.

The "job" of the building "craftsman" must, then, be made more attractive. One sure way to help in doing it is to eliminate as much lost time and idleness as possible. The industry must come to its own rescue and the public which has a vital stake in the enterprise must co-operate in the industry's program. The Building Congress movement shows the way out locally, regionally and inter-regionally, and if encouraged and co-

ordinated by the American Construction Council will nationalize it and the industry. First in Philadelphia, then in Boston and finally on a more comprehensive scale by the New York Building Congress data on lost time have been assembled in all the building trades and the peaks and depressions in each charted.

It is high time that through such agencies, with the full co-operation of employees—familiar with the turn-over and other special problems of the building industry—and skilled workers in the industry in each locality—the U. S. Department of Labor, Bureau of Statistics, and the American Construction Council when functioning, be provided with accurate data for informing the public as well as all other trades that the basic wage paid skilled building mechanics is not so much brighter than that paid other workers who have steady employment and receive 52 envelopes each year without loss of pay for holidays. Those who receive regular pay regardless of holidays or illness would not relish being docked for Christmas and other important days as are workers in the building trades and in such other trades as are paid only by the hours actually worked, rain or shine, ill or well.

Regular workers also usually receive each year one, or two weeks vacation with pay. But how different it is with the oft none-too-easy job of the construction worker. Instead of a reasonable annual rest period with pay, he gets an enforced leave of absence eight to ten times as long as the usual vacation period and without pay.

Because of the fact that wages actually received are only on the basis of hours actually worked (subject to the whims of some foreman, the caprice of the elements, or to transportation delays) there is insufficient incentive on the part of some employers to eliminate unemployment or

TABLE 2—WAGE RATES AND ANNUAL EARNINGS IN BUILDING TRADES OF PHILADELPHIA

	Hourly Rate	Daily Rate	Theoretic Annual Earnings	Average Annual Earnings

on the part of some of those employed efficiently to complete one job and take chances on promptly securing another, especially in seasons or localities where it is known that intelligent foresight is not being exercised to avoid intermittency.

Several leaders of labor in the building construction industry have made the positive assertion to the writer that if they and their workers were convinced that other groups were sincerely co-operating with them to afford them more days in which to work and fewer in which to be idle, they would welcome the opportunity to maintain their efficiency—and would do more!

They have made the candid and almost obvious statement that if they had an actual demonstration over a period of two average years that the unfortunate, unpleasant and expensive circumstances attendant upon idleness would disappear except on holidays for which they lose wages they would voluntarily reduce their hourly wage rate as a compensation for the relief from "fear of unemployment" and be better off each year in spirits as well as in finances.

In addition to the satisfaction to be deprived through such a use of time formerly lost—one thing which when gone can never be replaced—the saving to the building public would be enormous.

In 1920 and 1921 with the co-operation of the Philadelphia building trades and W. S. Hays, later secretary of the National Federation of the Construction Industries, there was made the first study of lost time in the building industry in any given locality. The figures have recently been brought up to date preparatory to another survey and it is expected that contractors and sub-contractors as well as labor will co-operate.

An advance copy of the preliminary report of a Committee to the Philadelphia Building Congress is here abstracted in the hope that the data may prove of value in other localities also and will afford a stimulus for similar studies elsewhere.

In making these calculations, there were first deducted from the 365 days of the year all Sundays, all holidays observed in the trade under consideration, and the number of full days lost through the custom of trade in regard to work on Saturday. What remained was called the number of possible effective working days. From this was then deducted the time lost through unemployment, the time lost—and unpaid for—on the job through delay in the delivery of materials or through other causes for which the worker is not responsible, the average time during which weather conditions prevent work, and the average time lost through illness and absenteeism. The remainder was taken as the average time worked during the year. No deduction was made for the time lost

through labor troubles; the "average days worked per year" represent what a man might expect if he took no part in strikes or lockouts, worked whenever weather permitted and he could get work to do, and had average success in securing employment. The results thus arrived at for the various trades are as given in Table I.

On the basis of these preliminary figures, the average annual income of the building trade workers in Philadelphia can be calculated. Taking the hourly rates paid in the various building trades, as compiled by the National Association of Builders' Exchanges and as representing conditions prevailing Sept. 30, 1922, and applying them to the data concerning average number of days worked in a year, Table II is obtained, in which the theoretic annual earnings represent what the worker would receive if he were employed for the full number of possible effective working days, and the average annual earnings show what he would receive if employed for the average number of days worked per year in his trade.

The table is based on the average number of days worked during the year 1920 but this average will be probably somewhat higher during 1922 due to the abnormal amount of building being done and the favorable weather to December 26. The hourly rate is that of union men; in cases where non-union men are employed the hourly rate may run higher or lower than the figures here given. These figures do not include any bonus which if given varies with each employer.

In only 4 out of the 15 trades considered do the theoretic annual earnings fall below \$2,000 and in only one do they fall below \$1,600. On the other hand the average annual earnings in only one trade rise to \$2,000; and in only two other instances do they reach \$1,800; in nine trades they are below \$1,500.

As stated in the Monthly Labor Review in its conclusion, "The difference between the theoretic and the average annual earnings lends force to Secretary Hoover's statement that in the building trades 'one of the reasons for the constant drive for higher hourly wages is to maintain an adequate annual income and to offset the loss due to intermittent occupation.'" Probably also, it throws some light on the reasons for the fact deplored by Senator Calder, that "American-born young men are no longer entering apprenticeships and learning construction trades from the bottom up, with a view to spending their lives in such work."—*Engineering News-Record*.

A Bill of vital interest to contractors and other employers of unskilled labor has been introduced into Congress by Senator Sterling. It calls for amend-

ment of our immigration laws and appointment of an independent Immigration Board of five members, four to be named by the president. The Secretary of Labor shall be a member ex-officio.

This Board would appoint immigration inspectors and assign them to duty at foreign ports. The examination of immigrants would be completed before they sailed for America, and Ellis Island would become a port of entry rather than a port of disappointment as it has to be today.

Immigration would be based largely on reports which would be rendered by each state to the Board in January, stating the amount of unemployment during the previous year, the kind of industries and occupations in which there was a labor shortage during the same period, and the kinds of immigration especially desired by each state.

The bill provides that not to exceed three-fourths of one per cent. of the total population of the United States may be admitted in any one year, and that the number allowed for any one national or racial group shall not exceed one-fifth of one per cent. of our population.

The Board is allowed to increase or diminish the number to be admitted from any nation or race, provided that in no case shall such number be fixed above 10 per cent. of the number of that nationality residing in this country. American born citizens whose foreign born father or mother belonged to such nation or race may be counted in determining the number of the race in the United States.

Though the bill specifically prohibits the admission of contract laborers, it provides that the Board shall send information to its foreign agents in regard to occupational and other characteristics of immigrants desired in the different states, and that certificates of admission to this country, specifying to what district the immigrant is to go on arrival, shall be used. Before receiving his final papers, the immigrant must purchase a through ticket to the specified destination. That may not be contract labor, but it comes fearfully close to it. The state, rather than the employer, does the contracting; but it is the employer who reports that there is a labor shortage and gives the chap a job when he arrives. On the whole it is a good bill, but it needs patching up in spots.

The only road to advancement is to do your work so well that you are always ahead of the demands of your position. Our employers do not decide whether we shall stay where we are or go on and up; we decide that matter ourselves. Success or failure is not chosen for us: we choose them for ourselves.—H. W. Mabie.

## What 131 Years Mean to You

**T**IME weakens an individual but strengthens an institution. This is definitely and importantly true of insurance organizations.

In selecting an insurance policy remember that a policy protected by 131 years of Company history is a double safeguard. "The oldest American Fire and Marine Insurance Company" puts behind its every policy a record of 131 years of met obligations.

A North America policy is a wise protection.

## As The Editor Sees It

### ALL-YEAR DEMAND FOR MATERIALS PROMISES FIVE BILLION DOLLAR BUILDING BOOM FOR 1923

The greatest year of construction activity in American history is in prospect for 1923, according to reports from all branches of the building industry.

Conservative estimates place the probable new building expenditures in all lines for the next twelve months at \$5,000,000,000.

Hitherto unprecedented activity during the fall and winter is cited as the outstanding reason for this 1923 program. In almost all sections of the country, the 1922 construction boom continued through the fall and early winter, resulting in a sustained demand for materials and labor. This action followed the desire of men engaged in building to profit from past experience which has shown that it is better to maintain an efficient working organization intact, than to disband because of the largely imaginative difficulties of winter construction.

Contractors, quick to grasp an opportunity for all-year work, not only completed many jobs that in previous years would have been carried over, but took on new contracts for prompt delivery.

The early days of 1923, therefore, find a heavy demand for steel, cement and other building material. The contractors and builders, displaying newly acquired wisdom, are taking no chances of being

caught with an overload of contracts without materials to build when the first opportunity appears.

The resultant activity is making itself felt all along the line. Railroads are enjoying in the ordinarily slack season a measurable increase in freight traffic. Manufacturers of building materials are being relieved to a certain extent of carrying the tremendous costs of overstocked warehouses with the usual necessity for suspending plant operations.

The movement of stocks without interruption through the winter has enabled manufacturers to keep going because a steady demand was calling for shipments of their products.

This movement, aside from its beneficial effect to the builder at the present time, is seen as a possible means of leveling the first peak load of demand in the spring.

It is noticeable in the advertising of contractors and builders at the present time that they are offering to take contracts with the promise of 60 or 90 day delivery on homes. If these opportunities are taken by prospective home-builders, it will enable contractors to keep the road clear and take care of the predicted influx of tardy planners when the so-called "building season" is in full swing.

Every encouragement should be given to a continuance of the present pace in construction work. The taking of early contracts, purchase, shipment and storage

of materials for building projects will release the heavy grip of peak load demand and unbalanced seasonal activity which have held the American construction industry at its mercy for so many years.

The experience of 1922 and the progress shown thus far in the new year, demonstrate amply the fallacy that any "season" for home building exists. It appears that 1923 will offer definite assurance of these facts which builders have attempted to impress upon the public for years.

If the transportation system can be kept at even keel, and the demands of traffic spread over a twelve months' period instead of approximately seven, while stocks are kept moving from the manufacturer to the job, America's annual building bill can be materially reduced in proportion to the amount of work done. Semi-annual congestion in railroads, affecting building materials, food-stuffs, coal and a great many other basic activities will be cleared up.

That the railroads not only recognize this spreading demand but are planning active representation in the building boom itself, is shown by reports of *The Railway Age* which place the possible construction expenditures by roads at more than \$900,000,000 this year.

This estimate is based upon the actual budgets of 31 roads controlling 40 per cent. of the nation's trackage which show \$387,000,000 set aside for 1923 work.

PRINTS**

Much of this total will go into stations, under-passes, viaducts, bridges, terminals and shops, and general betterments, the need for which has become acute.

The quota of \$5,000,000,000 for all building in the United States is based upon architects' reports to *The Architectural Forum*. This publication received detailed statements from 1,767 architects in all sections of the country and assembled them by type of construction, by states and by districts.

The result assures not only the biggest year for 1923, but that it will exceed 1922—a record breaker in itself—by at least \$1,000,000,000.

Get your materials now!

The report on Interior Building Construction consisting of Metal Lath and Gypsum Plaster on wood supports, jointly submitted by the Associated Metal Lath Manufacturers, Chicago, Ill., and the National Lumber Manufacturers' Association, Chicago, Ill., is probably the most useful and therefore most important report that the Underwriters and Laboratories has made. Architects, builders and the members of the building trades can profit greatly by carefully studying this report.

The use of this material is particularly advantageous for the following positions:

(1) Over heating plant, fuel storage rooms, for covering heat ducts, back of ranges for all buildings, including private residences and duplexes, where equivalent fire protection is not otherwise provided.

(2) On entire basement ceilings of all wood joisted buildings other than private residences and duplexes, except those two stories or less in height outside the fire limits. If the basement is equipped with an approved automatic sprinkler system, the use of metal lath on the basement ceilings is optional.

(3) For the walls and ceilings enclosing public halls or stairs, and on the underside of combustible stair carriages of multiple dwellings, also for division walls between apartments.

(4) On the entire basement ceiling, on walls and partitions enclosing halls or stairs, on the underside of combustible stair carriages, and on main floor ceilings wherever, in stores or factories, living quarters or public assembly are permitted above.

(5) For walls and ceilings of attached garages with wood studs or joists.

(6) As protection for joists, bearing partitions and all other structural wood, except for mill construction, in office buildings, banks, court buildings, passenger stations, museums, libraries, lodge buildings and halls; churches, theatres one story high seating less than 300, schools, colleges, institutions and hotels, asylums, hospitals and nurseries, and in

factory or mercantile establishments over 2 stories high.

The slate, industry, an important source of roofing, blackboards, billiard-table tops, and other more or less essential products, labors under a staggering handicap of waste, states the Bureau of Mines, which has completed a study of the subject. According to Oliver Bowles, mineral technologist of the bureau, in most slate producing districts the waste averages 70 to 90 per cent. of gross production. In one quarry in Vermont an average 16 tons of rock is removed for each ton of good slate.

The term "slate" is applied to fine-grained rock that has a more or less perfect cleavage, permitting it to be readily split into thin, smooth sheets. The term includes materials differing widely in color and having a considerable range in chemical and mineralogical composition.

The more common colors in slates are gray, bluish gray, and black. The reds, various shades of green, and variegated slates are less common, and purple is rare. Yellow brown and buff colors are occasionally found in deposits, but usually they have resulted from weathering, and slates of such colors are not marketable. Slates of certain colors are in demand and command high prices, whereas those of other colors are difficult to sell.

Slate makes such durable and attractive roofing that its use should be greatly encouraged, the Bureau of Mines considers furthermore, its noninflammability as compared with wood adds to its value, for the most frequent cause of dwelling-house fires in the United States is said to be sparks from a chimney alighting on a wood-shingle roof.

Slate suitable for blackboards must be soft and fine-grained. Such slate is obtained from what is known as the "soft-vein" region of Lehigh and Northampton Counties, Pa. This comparatively small area, not over 23 miles long, comprises the best if not the only good blackboard slate deposits in the world.

School slates were once common in America, but their use has greatly declined. Foreign demand is considerable, and most school slates now manufactured are exported. School slate is similar to blackboard slate, and the deposits are largely confined to the same area.

The chief structural slate products are mantels, floor tiles, steps, risers, flagging, skirting board, window sills, lavatory slabs, billiard and other table tops, wainscoting, hearths, well caps, vats sinks, laundry tubs, grave vaults, sanitary ware, refrigerator shelves, flour bins, and dough troughs.

Slate is used widely for purposes where low electric conductivity and mechanical

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS;

CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED: ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

**Residence**, Overbrook, Philadelphia. Architect, private plans. Owner, Horace J. Davis, 929 Chestnut street, Philadelphia. Stone and brick. Plans in progress. Too early for details.

**Store and Apartments (alts. and add.)**, 1527 Fairmount avenue. Architect, J. Frank Clark, 23 South Sixteenth street, Philadelphia. Owner, name withheld. Brick, 1 story add., 22x31 feet, slag roof, vapor heating, electric lighting, pine and cement floors, hollow metal skylights. Plans about completed. Architect will take bids in one week.

**Store and Apartments (alts. and add.)**, 244 South Fifty-second street. Architect, I. W. Levin, Victory Building, Philadelphia. Owner, A. Tansman, on premises. Brick, 2 stories add., 30x16 feet, slag roof, hardwood floors, hot water heating, electric lighting, plumbing, tile work, metal ceilings, plate glass. Owner will take general bids in a few days.

**Residence (alts. and add.) and Garage**, 1522 Bainbridge street. Architect, C. Henry Wilson, 2038 Berks street, Philadelphia. Owner, William B. Southern, Twelfth and Spruce streets, Philadelphia. Brick, rear add., 2 stories, 18x42 feet, slag roof, composition and cement floors, hollow tile, elevators, hot water heat, electric lighting, metal lath, iron work. Architect ready for bids due February 21st.

**Operation of Residences**, Rising Sun avenue and Olney avenue. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owners, Davies Brothers, 901 North Thirty-first street, Camden, N. J. Brick, 2 stories, 15x40 feet, slag and tin roof, hardwood floors, hot water heating, electric lighting, tile work, garages in basements, cement work, metal lath. Owners are ready for sub-bids.

**Residences (21)**, Sixty-fourth and Montgomery avenue, Overbrook, Philadelphia. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owners, Joseph A. Maloney and Martin McWilliams, 6308 Sherwood road. Stone and brick, 2 stories, 20x35 feet, slate, slag and tin roof, hardwood floors, central steam heating, electric lighting, metal lath, cement work, garages in basements. Owners are taking sub-bids.

**Warehouse**, 642 North Eighth street, Philadelphia. Architects, Stuckert Co., Crozer Building, Philadelphia. Owners, Coca Cola Co., on premises. General interior alterations,

office partitions, plastering, cabinet work, elevator, steam heating, electric work and fixtures. Architect is taking sub-bids.

**Garage**, Vine street, West of Twenty-third street, Philadelphia. Architect, private plans. Owner, name withheld. Brick, 1 story, 108x28 feet, slag roof, cement floors, plumbing, iron work, bond (heating, electric work reserved). C. O. Eddleman, 1627 Sansom street, is taking sub-bids due as soon as possible.

**Repairs to Room No. 452**, City Hall, Philadelphia. Architect, John P. B. Sinkler, 1211 Chestnut street, Philadelphia. Owners, Department of Public Works, Bureau of City Property. Metal furniture and new partitions. Owners will advertise for bids in a few days.

**Residences (6)**, Friendship and Edmund streets, Philadelphia. Architect, Michael Capobianco, 778 South Seventh street, Philadelphia. Owner, Raphael Gattis, 7138 Edmund street, Philadelphia. Brick, 2 stories, 15x54 feet, slag roof, pine floors, hot water heating, electric lighting. Owner is taking sub-bids.

**Residences (2)**, Wissinoming avenue and Agumen street, Philadelphia. Architect, Durham Brothers, 1609 Sansom street, Philadelphia. Owner, Martin Kasparaitie, 1004 Reno street, Philadelphia. Brick, 2 stories, 16x40 feet each, slag roof, pine floors, hot water heating, electric lighting. Plans in progress. Owner will take sub-bids in one week.

**Hanover Playground**, Columbia avenue, Earl and Livingston streets. Architect, John P. B. Sinkler, 1211 Chestnut street, Philadelphia. Owners, Department of Public Welfare, Bureau of Recreation. Grading, concrete work, paving, surfacing, plumbing and electric work. Owners taking bids due February 15th at noon.

**Residence**, Weigard street, East of Ridge avenue, Roxboro, Philadelphia. Architect, Amos W. Barnes, 22 South Seventeenth street, Philadelphia. Owner, Walter J. Schoppe, 10 South Eighteenth street, Philadelphia. Stone, 2 stories, 37x25 feet, slate roof, oak and pine floors (vapor heating, electric work and plumbing reserved), tile and iron work. Architect taking bids due February 15th.

**Office Building**, 5225 Chestnut street, Philadelphia. Architects, Seeburger & Rabenold, 1524 Chestnut street, Philadelphia. Owner, W. Edwin Blair, 451 South Sixty-third street,

Philadelphia. Brick, limestone, concrete and steel, 1 story, basement and mezzanine, 110x24 feet, slag roof, cement and maple floors, metal lath, tile and marble work, iron work. Architects taking bids due February 16th.

**Residence**, 536 Pelham road, Germantown, Philadelphia. Architect, Edwin L. Rothschild, 1420 Chestnut street, Philadelphia. Owner, Louis A. Hirsch, 919 Walnut street, Philadelphia. Brick and stucco, 2 stories, 55x31 feet, wing 11x32 feet, slate roof, oak and pine floors, steam heating, electric lighting, metal lath, tile and marble work, bond. Architect taking bids due February 15th.

**Residences (30)**, 2000 to 2058 Margaret street, \$100,400. Architect, private plans. Owner, Nelson C. Rawley, 2101 South Nineteenth street, Philadelphia. Brick, 2 stories, various dimensions, slag roof, steam heat, electric light. Owner will build.

**Residences (23)**, South side Rockland, West of B street, \$116,000. Architect, private plans. Owner, W. Witte, 5106 North Carlisle street, Philadelphia. Brick, 2 stories, 16x38 feet, (21) 16x26 feet, 13x11 feet, slag roof, hot water heat, electric light. Owner will build.

**Residences (11)**, Park and Medary avenues, Philadelphia, \$44,800. Architect, private plans. Owners, J. & A. E. Janke, 6295 North Broad street, Philadelphia. Brick, 2 stories, various dimensions, slag roof, hot water heat, electric light. Owner will build.

**Residences and Garages (6)**, South side Mt. Airy, West of Jefferson street, \$11,000 each. Architect, private plans. Owner, J. W. Moffly, Pelham Court, Emlen and Carpenter streets. Brick, 3 stories, 17x12 feet, 23x26 feet, slag roof, hot water heat, electric light, hardwood and cement floors, tile work. Owner will build.

**Pumps and Blowers House**, Northwest Corner Carbon and Tioga streets, \$9,200. Architect, private plans. Owners, United Gas Improvement Co., Broad and Arch streets, Philadelphia. Brick, 1 story, 42x20 feet, slag roof, cement floors, steel sash. Owner will build.

**Residences (17)**, Fifty-fourth and Florence avenue, Philadelphia, \$4,000 each. Architect, private plans. Owners, Joseph Weiner and H. Pepper, 524 Fernon street, Philadelphia. Brick, 2 stories, (1) 16x43 feet, and (16)

# TRUSCON Agatex HARDENER

Shipped as dry Crystals, for making Concrete Floors Hard as Iron  
**THE TRUSCON LABORATORIES**

## HARDENED CONCRETE FLOORS DO NOT DUST

It is not necessary to put up with dusting cement floors. Over night a soft cement surface from which the cement dust can easily be scratched with the toe of the shoe—can be transformed into a hard, impenetrable floor that will not "sand" or crumble, even under the hardest foot traffic. Phone or write us for information.

Contract awarded to Smyth Const. Co., 826 Orange street, Wilmington.

An old legend tells of a magician's vase; the magician could get out of it only that which he put in. Advertising is just that. If you don't get into it the "kick" of salesmanship it is going to miss by just that much the pulling power it ought to have.

## Proposals

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., February 5, 1923. Sealed Proposals will be opened in this office at 3 P. M., February 26, 1923, for furnishing and planting trees, shrubs and flowers on the site of the U. S. Marine Hospital No. 82, Tanner's Creek, Norfolk, Va., in accordance with the specification and drawings, copies of which may be obtained from this office, or from Superintendent of Construction at the site, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

(Continued from page 100)

strength are required. Electrical slate should be strong, and of such quality that it can be cut and drilled without scaling; it must be free of magnetite and of veins of low-resistance minerals.

The earliest reference to the use of slate for roofing probably is the construction of a chapel roof at Bradford-on-Avon, England, in the eighth century. Slates were used to cover old castles at Carnarvon and Conway in North Wales during the twelfth century. A slate-roofed castle at Angers, in France a famous modern slate-mining center, dates to about the twelfth century.

Probably the oldest slate quarry in the United States is in the Peach Bottom district at the Pennsylvania-Maryland line, from which slate was taken in 1734. Active slate quarrying is now confined to the States of Maine, Maryland, New York, Pennsylvania, Vermont and Virginia. The chief production is from the Lehigh district of Pennsylvania. The Peach Bottom district, which extends from York and Lancaster Counties across the line into Harford County, Md., has produced considerable slate. The active Vermont district lies in Bennington and Rutland Counties and extends into Washington County, New York. The Maine slate deposits occur in Piscataquis County about the center of the State. Slate occurs in several distinct deposits in Virginia, but operations are now conducted only on the Arvon belt of Buckingham and Fluvanna Counties.

After a careful study of the waste problem from all angles the conclusion has been reached by the Bureau of Mines that the efforts of the quarryman should be devoted to waste elimination rather than to waste utilization problems. Considerable interest has been directed toward the activities of a company organized in Wales for the purpose of manufacturing useful products from the tremendous waste heaps of the Pantdreniog, Penrhyn, and Deniorwic slate quarries. The waste dumps controlled by the company are estimated to contain 200,000,000 tons of slate. Claims have been made that waste slate may be used in

the manufacture of brick, pottery, roofing tile, glass, paint, distempers, putty, metal polish, abrasive soap, insulators, molded rubber goods, asphalt and Portland cement. It is claimed that the finest powders collected in dust chambers may be used for toilet and tooth powders. Considerable quantities are sold for dusting coal mines to prevent explosions of coal dust.

### NEW METHODS OF MEASURING SAND

*New Method Being Tested Likely to Increase Reliability of Concrete Work, and Decrease Cost*

#### MAY EFFECT LOWER SAFETY FACTOR

The reliability of concrete construction is likely to be increased, and the cost in some cases reduced, by the application of a newly-developed method of measuring sand which is now being tested at the Bureau of Standards of the Department of Commerce. The method has been termed the "inundation method" and consists of measuring sand in a container which has been partly filled with water before the sand is put in, so that when the sand is in the water is up to the top and the sand completely soaked.

The volume occupied by a given amount of sand when shoveled into a measuring device varies with the moisture content of the sand; the difference in measured volume between dry and moist sand being usually from 10 to 15 per cent. and occasionally running as high as 50 per cent. But it is found that if the sand is completely soaked or "inundated" uniform measuring results can be obtained no matter how much the original moisture content may have varied.

A rich concrete is not necessarily stronger than the concrete the contractor intended to make, for the sand has brought in some water in addition to that which is added on purpose; and if this extra water is not allowed for and the amount of water added correspondingly decreased the concrete will contain too much water. It will be sloppy, and, when set, will not be dense enough to give the necessary strength.

It is hoped that with the inundation method it may be possible to specify concrete by the strength required rather than by arbitrary proportions. The contractor can then find the proportions of the materials he is using that will give the requisite strength and can adhere closely to these proportions. The result will be a concrete whose proportions are more nearly what they were intended to be, and with which a lower factor of safety can be used.

Many a man would do a better job if he didn't know about putty.—Ex.

### FINDS SMALL HOUSES CAN USE EIGHT-INCH BRICK WALL

That eight inch brick walls can be used in one and two family houses having walls under thirty feet high was one of the conclusions reached in a recent extensive investigation of building codes by the Building Code Committee of the Department of Commerce. This conclusion was reached as a result of careful analysis of building codes, of a series of fire tests conducted at the Bureau of Standards, and of a series of strength tests conducted at the same institution. It is expected that this recommendation will result in a substantial saving in construction cost, as the present building codes usually require thicker walls than this. Exception must, of course, be made in regions liable to earthquake shock.

Beginning in July, 1921, the Building Code Committee of the Department of Commerce has been studying and comparing building codes from all over the country as applied to small houses. The Bureau of Standards has been co-operating closely with them and has furnished much of the experimental work on which the findings of the committee are based.

Its work is now completed and is embodied in a publication entitled "Recommended Minimum Requirements for Small Dwelling Construction." This publication can be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C., at 15 cents a copy.

The book begins with a discussion of the origin of the committee and its methods of working. Then some of the more important of its findings are discussed. This is followed by a standard building code which covers the minimum requirements. It is written in such form that it may be adopted without change in wording either as a building code or as an amendment to existing codes. It is intended to serve as a guide and a standard in the formation of local building codes.

The latter part of the book is taken up with an extensive detailed discussion of the recommendations made and the data on which they are based. It is freely illustrated and contains much information of value to architects and builders.

Don't crowd your space, Mr. Advertiser. Better play up one selling point at a time than to try to get everything into one ad. and kill every possible chance for display. An ad. should stand out. It should be easily read. It should draw the attention of the reader. A carload of detail can't be crowded into a few inches of space and still retain the quality of sticking out as all good advertising should.

### THE DAWN OF A PROSPEROUS YEAR

THE year 1923 opens for the building industry a vista of good and profitable business throughout the year. Present indications point to as prosperous year as 1922, if not better. Buildings of all kinds are needed. The housing situation has not been caught up with and will not be for several years to come. The demand for small apartments continues quite active, even in the smaller towns this type of house is very popular. On the other hand, a great many people in our large cities who have always lived in apartments are going out into the suburbs as home owners.

Based upon a survey it has just completed, the Copper and Brass Research Association estimated the total building construction required for 1923 as follows:

Schools .....	\$1,540,000,000
Apartment Houses .....	1,253,000,000
Dwellings .....	940,000,000
Hotels .....	851,000,000
Industrial Buildings .....	827,000,000
Office Buildings .....	804,000,000
Hospitals .....	595,000,000
Churches .....	530,000,000
Public Buildings .....	328,000,000
Public Garages .....	162,000,000

\$7,830,000,000

To complete such a vast amount of building construction during the year 1923, presupposes that the entire shortage, plus the normal increment be carried out in 1923 and that we shall enter 1924 with a clean building slate.

It will be beyond the material and labor resources of our country to carry out such an extensive building program to a conclusion in 1923, even should the financial resources be available. Two-thirds, or about \$5,000,000,000 seems to be a conservative estimate of the building that will be possible in our country for this year.

Conservative forecasts reveal an enormous prospective volume of building construction in nearly every section of the country. There is no builder in the good old U. S. A. who should not be busy every day of 1923.—*Building Age*.

The man who doesn't advertise because he can't afford to "do it right" will never reach a position of affluence because everything worth while in the world had to have a beginning, and there can be no "get there" for the fellow who fails to make a start.

If your sales-talk is keyed to interest men who build it should occupy space every week in the "Guide," the only building news magazine this side of Manhattan Island.

## Failures Come in Minutes

—it takes time to build success

You have built a successful business,  
a factory, a home—after years of  
effort. You cannot afford to lose  
all through a single misfortune.  
An hour's fire—a flash of lightning—  
an explosion—Your success may turn  
to failure in a moment's time.

No success is safe unless insured.

## As The Editor Sees It

### CITY SURVEYING—ITS PROBLEMS AND IMPORTANCE

(By A. MALKIN, Civil Engineer, Detroit, Mich.)

Reprint from Lawyer and Banker

In city surveying there are two distinct phases: The first is the original establishment of property lines and the second, the re-establishment of the original property lines.

In establishing the original property lines subdivision layouts are made which consist of the division of farm land into blocks accessible on all sides to streets or alleys. These streets and alleys are deeded to, and become the property of the municipality in which the subdivision is to be included. These blocks are further subdivided into smaller parcels each abutting on a street. The parcels are called lots and the dimensions of a lot measured along the street it abuts are termed its frontages.

The boundaries of blocks which are also the boundaries of the public streets and alleys are established by the placing of monuments at each and all of the breaks in the boundary line which is at the point of intersection of the two straight lines forming the break. The subdivision of the block into lots is done in a similar manner. The types of monuments used are of stone, iron and wood.

The most common type of monument used is the wood stake, one to two inches

square and from eighteen to twenty-four inches long. In many instances round iron pipes from one to one and one-half inches in diameter are required to be used for locations of street corners or block boundary lines.

When the subdivision has been staked out a plot showing the dimensions and locations of principal monuments and sizes of lots together with the bearings of streets and alleys is filed with the proper authorities of the state, county and municipality in question. When approved, the layout goes on record and marks the completion of the first phase of city surveying.

The second phase begins where the first leaves off. In attempting to re-establish the original property lines, it is important to note that the controlling factor is the location of the original monuments witnessing the boundary lines regardless as to whether they agree with the dimensions of the recorded plat plan.

To understand the principal problems confronting the engineer in this phase of surveying, it is well to analyze the growth and development of a city. From a surveyor's viewpoint a city may be looked upon as the outgrowth of an original farm settlement formed along a highway which acts as its only or principal street. To this nucleus the continuous additions of subdivisions form its growth. While the city in its endless development has its corresponding variations in the care with

which new subdivisions are incorporated, we can safely for our purpose divide it into two stages.

First, when the municipality is too small to supply the proper supervision for the purpose of examining and correcting the proposed new subdivisions; second, when the old more or less haphazardly built up city becomes sufficiently important to afford competent men to pass on its proposed additions (and in many large cities there is a city planning commission which arranges all proposed new subdivisions to facilitate the future expansion of the city).

During the first period of a city's growth, there is a very important factor which tends to upset if not nullify the work of the original layout of the various subdivisions. That factor is the relative cheapness of property when measured by the standard of foot frontage. This comparative lack of value causes laxity on the part of those who are the pioneers of the city. Very few if any of them would pay for the services of an engineer if he was at all to be conveniently procured.

In a number of non-monumented American cities, where all traces of original monuments of a subdivision are gone (and that is only a short time in the history of a city) there are two main sources by which the engineer is expected to read the past. The first is the public streets and alleys. The second, existing

old buildings some of which date to the time when the original monuments must have been existent.

The boundaries of city streets may be determined from the curbs which separate the roadway from the sidewalks. This roadway is, whenever possible, located in the center of the street, leaving on either side equal widths for sidewalk purposes. When adjoining subdivisions do not provide for continuous straight streets and when the variations are small the city lays its curbs so that the roadway is kept straight leaving unequal distances between curbs and street boundary lines. Thus any reference that might have been of some use in locating the block boundary lines from curbs is destroyed. The location of existing old time buildings would have been a proper key to the situation were it not for the carelessness of the pioneer city builders in whose interest the law of adverse possession is in force.

In addition to the above two causes which contribute to the complications of re-establishing boundary lines there has been a third and most essential condition which unfortunately reflects also upon the original surveyor of the subdivision. Up to very recently and even now in only a few states surveyors are required to be registered by the state which tests their ability before unloading them upon the public. In the past, therefore, there were two grades of men in practice the intelligent and reliable practitioner who would not render his services unless the compensation enabled him to give it the necessary care and employ the proper help. However, the demand of real estate operators for lower charges who did not grasp the importance of a correct layout as a duty to the future property owner and the city as a whole caused some men unfit by their education and experience to enter the field of surveying. In many instances while the principal of a firm of engineers was a man of proper training and experience he was forced to employ an organization below his standard due to the low compensation received.

These inaccurate surveys did much towards the creation of what is now termed discrepancies which are shortages and surpluses according to the actual measurements in the field as compared with the dimensions of the original recorded plats.

As an illustration of the above we have recently been called upon to survey seven adjacent lots which form a part of an old subdivision in the outskirts of the city. On record were two survey plats made subsequent to the original layout of the subdivision. These plats did not agree with each other nor with the original and all three had practically no relation to the actual measurements in the field. Upon investigating the situation we

found that the ground was first staked out in accordance with a proposed layout which was subsequently changed before it was placed on record. A second staking out was made in accordance with a new layout which was duly recorded. However, the owner of the subdivision refused to pay for the removal of old stakes relating to the first survey so that at the present time there are two sets of stakes causing confusion in determining the property lines.

It can readily be seen that when the city lays its streets according to this cross information and when this section is built up and all possible reference to old stakes destroyed, it will require a superman to determine the boundaries of the property and yet there seems to be no attempt to correct the description in the various abstracts of title to the property at a time when there is yet a possibility of straightening the matter out.

Another instance where a shortage of seven inches in a block caused a great deal of trouble including court action and financial loss to the builder was brought to us for final certification.

According to the description in the abstract covering this property, a set of plans were drawn by an architect for an important apartment building which was duly approved by the city authorities. The property in question is located on a corner so that the foundation was laid out in relation to the two streets and the rear alley. When the footings were completed an unjunction was granted the adjacent property owner restraining the builder from encroaching on his property. A survey was made and it was found that there is a shortage in the block and in view of the fact that all existing buildings and fences indicate that the lots were all measured from the other side of the block, this corner property owner was forced to take what was left between the last property line and the street line.

In the above case if the abstract during its various examinations of title would have had its description of property corrected and certified to by an engineer it is probable that the shortage might have been traced and recorded as belonging to some other lot. In any event, the present owner would have known exactly what he was buying, paying only for the actual frontage instead of an imaginary one, and would have finally been spared a great deal of inconvenience and loss of time and money.

In a recent survey of an important business frontage in a small town near Detroit we found the block to be two feet longer than the total recorded frontage for that block. In this instance, it was an interior lot, one side of which was bounded by a building whose frontage measured the total recorded frontage to

CONTEMPLATED CONSTRUCTION: ARCHITECTS AND OWNERS: COST LIMIT: LAST DAYS FOR FILING BIDS:

CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED: ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

**Residence**, Wayne avenue and Hortter street, Philadelphia, \$15,000. Architect, Karl F. Otto, 3 North Nineteenth street. Owner, Mrs. W. B. Davenport, 1315 Colwyn street, Philadelphia. Stone, 2½ stories, 29x42 feet. Plans in progress.

**Residences (2)**, 1925-27 Panama street, Philadelphia. Architect, William F. B. Koelle, Otis Building, Philadelphia. Owner, Mrs. Charles T. Cresswell, 2122 Locust street, Philadelphia. Brick, 4 stories, 35x50 feet, general alterations. Plans in progress.

**Residences (45)**, Erdrich and Welsh road, Philadelphia. Architect, Richard R. Neely, 2126 Pine street, Philadelphia. Owners, Mt. Zion Baptist Church, Philadelphia. Brick and stucco, 2 stories, 16x35 feet, asbestos roof, pine floors, hot air heating, electric lighting, cement work. Plans about completed. Will be ready for bids in one week.

**Church**, Erdrich street and Welsh road, Philadelphia. Architect, Richard R. Neely, 2126 Pine street, Philadelphia. Owners, Mt. Zion Baptist Church, care of architect. Brick, 40x96 feet, slate roof, pine floors, hot water heating, electric lighting. Plans in progress.

**Residence and Garage**, Queen Lane, Philadelphia. Architects, Richard R. Neely and E. William Martin, 2126 Pine street. Owner, Howard Stringer, care of architects. Brick and stucco, 2½ stories, 30x37 feet, hot water heating, electric lighting, tile work, hardwood floors. Plans in progress. Ready for bids in one week.

**Club House (alts. and add.)**, location withheld. Architect, Charles J. Mitchell, 15 South Twenty-first street, Philadelphia. Owner, name withheld. Hollow tile, plastered, 1 story, 30x50 feet, slag roof, pine floors, electric lighting, rolled steel sash, mill work. Plans in progress. Architect will be ready for bids in three weeks.

**Residences (122)**, Sixty-sixth avenue, Sixty-seventh avenue, Ogontz avenue, and Twentieth street and Uber street, Philadelphia. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owner, Frank D. Williams, Sixty-sixth and Ogontz avenue, Philadelphia. Brick, 2 stories, 16x40 feet, 15x39 feet, 16x32 feet and 18x30 feet, slag, slate and tin roof, hardwood floors, hot water heating, electric lighting, garages in basement, cement work, metal lath. Owner is ready for sub-bids.

**Residences (60)**, Akron street, between Pratt and Bridge streets, Philadelphia. Architect, private plans. Owners, Smith & Schmunk, 800 West Erie avenue, Philadelphia. Brick, 2 stories, 16¼x34 feet, slag, tile and tin roof, hardwood and composition floors, hot water heating, electric lighting, tile work, garages in basements. Owners ready for sub-bids.

**Residences (21)**, Fifty-sixth street, North of Berks street, Wynnefield. Architect, Samuel Abramson, 2313 Walnut street, Philadelphia. Owner, name withheld. Brick and stone, 2 stories, 16x50 feet, slag and tile roof, hardwood and cement floors, hot water heating, electric lighting, tile work, metal lath, garage in basements. Architect is taking sub-bids.

**Stores and Apartments (8), Apartment House (10), Store Building, and Residences (22)**, Walnut street, Fifty-sixth and Walnut streets, Fifty-sixth street and Sansom street, Philadelphia. Architect, J. S. Fuller, 1615 Spruce street, Philadelphia. Owner, Dore Construction Co., 1218 Chestnut street, Philadelphia. Brick, 3 stories, 26x52 feet, (1) 3 stories, 18x60 feet, (10) 3 stories, 22x62 feet, and (22) 16x40½ feet, slag and imitation tile roof, hardwood floors, metal ceilings, metal bulks, plate glass, fire towers, tile and marble work, hardwood floors, hot water and steam heating, electric lighting. Owners will build.

**Residences (50)**, Fifty-second and Lebanon avenue, Philadelphia, \$9,000 each. Architect, J. S. Fuller, 1615 Spruce street, Philadelphia. Owner, Harry Goldstein, 921 North Forty-third street, Philadelphia. Brick, 2 stories, 16x42 feet, slag and tin roof, hardwood floors, hot water heating, electric lighting, tile and marble work, garages in basement. Owner is ready for sub-bids.

**Residences (7)**, Sixty-eighth avenue, between Seventeenth and Smedley streets, Philadelphia. Architect, Karl F. Otto, 3 North Nineteenth street, Philadelphia. Owners, John J. Bateman & Son, 5138 Wayne avenue, Philadelphia. Brick, 2 stories, 20x35 feet, slate and slag roof, hardwood floors, hot water heating, electric lighting, metal lath, tile work, cement work, metal lath, garages in basements. Owners taking sub-bids.

**Store and Apartments (add.)**, Fifty-eighth and Chester avenue. Architects, Richard R.

Neely & E. William Martin, 2126 Pine street. Owner, Mr. Cline, care of architect. Brick, 18½x25 feet, slag roof, stair work, hot water heating, electric lighting. Architects will be ready for bids in a few days.

**Store and Storage Building**, Twenty-third and South streets, Philadelphia. Architects, Richard R. Neely and E. William Martin, 2126 Pine street. Owner's name withheld. Brick, 2 stories, 25x60 feet, steam heating, plate glass, plumbing. Ready for bids in a few days.

**Church**, Thirteenth and Ruscomb streets, Philadelphia. Architects, Ritcher & Eiler, Reading, Pa. Owners, Muhlenberg Memorial Church, care of Rev. C. P. Swank, 4927 North Camac street, and Paul Hoft, chairman of Building Committee, 1119 Wyoming avenue, Philadelphia. Ready for bids.

**Municipal Building**, Germantown avenue and Haines street, Germantown. Architect, John P. B. Sinkler, 1211 Chestnut street, Philadelphia. Owners, Bureau of City Property, Department of Public Works, C. H. Caven, 216 City Hall, Philadelphia. Brick, cut stone, concrete and steel, 3 stories, 122x74 feet, slag roof, cement and monolithic floors, metal lath, rolled steel sash and skylights, tin-lined doors, bond, iron work (heating, electric work and plumbing separate bids), dampproofing, terra cotta. Owners taking bids due February 28th.

**Stores and Apartments (11)**, East side of Broad street, North of Rockland street, Philadelphia. Architect, E. Allen Wilson, 1208 Chestnut street, Philadelphia. Owner, A. H. Waldow, Widener Building, Philadelphia. Brick, 3 stories, 16x67 feet, (2) 18x67 feet, slag roof, hardwood, pine and composition floors, iron work, cut stone, flush bulks, plate glass, hollow metal skylights, tile and marble work, metal lath, hot water heating, electric lighting. Architect taking bids due February 26th at noon.

**Stanfield Playground (alts.)**, Front and Lombard streets. Architect, John T. Windrim, Commonwealth Building, Philadelphia. Schedule C—Furnishing and setting granite curbing, repairing footfalls, etc. 100 feet blue stone curb, 400 feet granite curbing, 1,900 feet concrete curbing, 400 square yards brick walk, 2,600 square yards cement walk, 1,100 square yards brick repaving.

Schedule D—500 feet cement curbing, 500 square yards brick walks, 500 square yards cement walks, 200 water stop boxes, 200 sewer lateral vent boxes, 700 feet granite curb, 500 feet concrete curb, 500 square yards cement walks, 2,000 feet concrete curb, 3,000 square yards cement walks.

**Elevator Shaft,** South side Reed, East of Meadows street, \$3,000. Architect, private plans. Owners, Franklin Sugar Refining Co., Reed and Meadows streets, Philadelphia. Brick work. Owner will build.

**Residences (5), Nos. 2030 to 2038 Latimer street, Philadelphia.** Architect, William F. B. Koelle, Otis Building, Philadelphia. Owner, Henry H. Farley, Widener Building, Philadelphia. Brick, cut stone and steel, plumbing, carpentry, mill work, slag roof, painting, glazing, electric light, tile and marble work (heating reserved), bond, iron work. Architect taking bids due February 26th.

**Residence (alts.) and Garage,** Chestnut Hill, Philadelphia. Architect, William F. B. Koelle, Otis Building, Philadelphia. Owner, Dr. Francis Clark Grant, 3400 Walnut street, Philadelphia. Architect taking bids due February 23rd.

The man with an order to place doesn't hunt you up in the city directory these days. He hasn't the time. If he can't find you in your trade magazine he can and does find somebody else, and that somebody else books the order.

The man who doesn't advertise, these days, is forgotten. The world is too busy to look up dead ones.

The BUILDERS' GUIDE is in its thirty-eighth year of continuous publication.

## HARDENED CONCRETE FLOORS DO NOT DUST

It is not necessary to put up with dusting cement floors. Over night a soft cement surface from which the cement dust can easily be scratched with the toe of the shoe—can be transformed into a hard, impenetrable floor that will not "sand" or crumble, even under the hardest foot traffic. Phone or write us for information.

Reinforced concrete, stone and steel, 2 stories, 369x98 feet, slag roof, concrete and wood block floors, rolled steel sash. Contract awarded to Barclay White Co., 1713 Sansom street, Philadelphia.

(Continued from Page 116)

the corner, while on the other side the lot line was clearly determined by an old brick building located on the lot in question. It was evident that the building on the lot in question was laid out in relation to one end of the block whereas the other building assumed the other corner as correct, leaving a surplus of two feet which no one can legally claim but may be occupied and used by the owner of the vacant lot in question, without interference by adjoining property owners because they have no ground for court action. In this case the owner is the gainer but whether gaining or losing the fact that the description in the abstract is not reliable depreciates from the value of the abstract.

Another view of the importance of a survey is the general information furnished by a surveyor as, for example, the proposed condemnation of property. Recently, in two similar cases in different parts of the city the lack of information of the proposed condemnation for the purpose of street widening caused great financial loss to the builders concerned. In both cases plans were drawn for an ordinary store and apartment building where the certainty of its approval by the building department of the city caused the builders to complete basements for the structures prior to obtaining a building permit.

In the city of Detroit in cases where the condemnation of property is only in its proposed stage and carries no certainty of its being approved, the building department will issue a permit for the erection of a building upon the property at the risk of the builder.

The builders in both of these cases found it too risky to proceed according to original plans so that whatever could be salvaged of the material in the basement walls was used for the new structures built according to new plans assuming the proposed future front property lines.

It is a fact that so far in the examination of abstracts at the time of transfer of title no attempt has been made to bring the description of the subject property

to date simultaneously with its legal ownership.

Even if there were no new buildings erected on the property since its last transfer a survey would show whether the adjacent property owners did not encroach on the property in question which would require legal action to cause their removal.

It is gratifying to note, however, that a number of our financial institutions and all the way down to the smallest property owners and builders are beginning to realize the importance of establishing the accurate boundaries of their properties. The cost of the service is usually so very low as compared with the safety and peace of mind it affords that it leaves practically no case where it might or should be dispensed with.

The present practice of requiring surveys of vacant property in the case of loans on new structures and further surveys showing the location of buildings in relation to property lines for both new and old structures on which mortgages are issued is well expressed by Mr. N. M. Gross, Vice-President of the Federal Bond and Mortgage Company, one of the foremost first mortgage houses in the state of Michigan:

"We consider the survey of a piece of property one of the most important essentials in the safeguarding of our mortgages; in fact, we require two surveys under each loan we make. The first survey is of the real estate itself—the second survey shows the building within the lot lines. We have always adhered strictly to this policy."

In a reply to our request, Mr. J. L. Hirschman, associate to Mr. Albert Kahn, prominent architect and engineer of Detroit writes:

"Referring to your request from us for an expression as to the necessity of a survey in connection with building construction work. Such an inquiry is merely putting in other words whether it is necessary to know accurately the location and the size together with the levels of a piece of property in order to plan a building to be erected on the same. We believe the condition speaks for itself."

The H. G. Christman & Company, prominent Detroit builders of wide experience, has this to say:

"In our opinion a survey is a cheap form of insurance against damages which may arise from the improper location of a structure. In several cases where we have had contracts to add to existing buildings, we have found the existing buildings to be encroaching on adjacent property. Such conditions if not properly safeguarded against, may be the cause of considerable financial loss to the contractor."

Mr. F. J. Beyer, Assistant Cashier in

charge of real estate mortgage loans of the Bank of Detroit, expressing the policy of the bank on the question of the importance of surveys to the mortgages, clearly emphasizes the most important point:

"The Bank of Detroit is not satisfied merely with having the abstract of title brought down to date in connection with safeguarding its mortgage loans. While the abstract gives assurance as to the correct legal ownership, it does not vouch in any manner for the description of the subject matter covered by the abstract. Too often the piece of property itself, which is the security of the loan, is found, upon having it surveyed, to be materially different from what is called for and described in the abstract of title. Consequently, we have learned by experience to rely not only upon the abstract of title to give us our legal protection but equally as important upon a competent survey of its subject matter to give us our corporate rights."

The Union Trust Company, through its Vice-President and the Real Estate Officer, Mr. B. H. Manning, in charge of the real estate and mortgage departments which handles a great volume of loans on behalf of a prominent eastern insurance company sums up the situation in this very clear manner:

"The survey furnishes a means of accurately checking the description in the mortgage or other conveyance; gives assurance that the buildings appraised are actually situated upon the property covered by the mortgage; and in addition shows whether or not existing building restrictions and the building code have been violated. We have found it not only highly advisable but almost essential to insist upon a survey in connection with mortgage loans."

#### BIGGEST TESTING MACHINE IN THE WORLD AT BUREAU OF STANDARDS

A crushing force equal to the weight of fifty loaded coal cars of a hundred tons each can be exerted by the largest testing machine in the world which is now being installed at the Bureau of Standards. This machine has been in use for several years at the branch laboratory in Pittsburgh and has recently been moved to the main laboratory in Chevy Chase, a suburb of Washington, D. C.

The machine has been erected and when adjusted will be ready about the first of the year to continue work on the specimens for the towers of the Delaware River Bridge now under construction at Philadelphia. After that it will be used on the remainder of seventy-two steel columns which were being tested at Pittsburgh. It has recently been used for

tests on forty-five samples of brick walls laid in different ways and with different kinds of mortar.

This machine has two massive heads, one set in a concrete foundation beneath the laboratory floor, the other supported on four steel screws, each over a foot in diameter, and two stories high. The upper head may be set at any height by turning the nuts on the screws by means of an electric motor.

The specimen to be tested is placed in the machine by an electric crane capable of lifting twenty tons. The upper head is brought down until it rests on the specimen and the load applied by a huge hydraulic jack built into the lower head. The piston of this jack, on which the specimen rests, is lifted by oil forced into the cylinder under a pressure of 5,000 pounds per square inch by a motor-driven pump.

Measurements are usually made of the shortening of the column under load, and when it crushes the broken pieces are studied to find the reasons for the failure and the method for making stronger columns.

Long columns are the most difficult of all engineering structures to design. No reliable means has yet been worked out for calculating their strength in advance from the unit strength of the material. This can be done with a rod in tension. Ten ropes will carry ten times as much as one rope, and a bar of iron two inches by five will carry ten times as much load in tension as a bar one inch square,—provided the material is the same throughout. But with a column in compression this is not true. The strength depends much more on the shape and size of the part than it does on the amount of material in it, so the only way to be sure the column is strong enough is to test the full sized part in a testing machine such as this.

Such tests result in a great saving of money. Once a column has been tested the load that can safely be carried by a column of the same size and type is known, and all such columns built thereafter can be loaded to their safe working load without fear that they will fail.

It is believed that by careful experimental work a method of design can be found which will allow the strength of steel columns for bridges and buildings to be calculated before they are built. This will be of great benefit to everyone using buildings, as it will be possible to make them safer and at the same time cheaper. A thorough investigation of this important problem can be made only by effective co-operation of the engineers and architects designing buildings with trained investigators such as those at the Bureau of Standards, and with the public who pays for the use of the buildings.

The only road to advancement is to do your work so well that you are always ahead of the demands of your position. Our employers do not decide whether we shall stay where we are or go on and up; we decide that matter ourselves. Success or failure is not chosen for us; we choose them for ourselves.—H. W. Mabie.

Repetition tends to create habit, the more often we see, do or hear a thing, the quicker we are likely to be influenced by it. The consecutive appeal of a number of advertisements will develop certain memories and associations tending to overcome the natural habit of procrastination.—Making advertising pay.

America stands supreme in the development and use of advertising, and advertising is the seed which by implanting desire produces the fruit of social advancement. Education promotes efficiency and efficiency in turn makes possible higher earning power, higher purchasing power and improved living conditions.

Investigations of the Bureau of Mines show that waste slate may be used to advantage as a filler in mechanical rubber goods and in some classes of oilcloths, floor coverings, and window shades. For plastic roofing and flooring products containing coal tar it has long been in use and is a very satisfactory filler. Several hundred carloads a year of waste slate are probably used for this purpose at the present time.

For some products, particularly for rubber, a much finer grained slate flour than any now on the market is demanded. One of the most promising ways in which manufacturers of pulverized slate can promote a wider use of slate flour is by producing a uniform, reliable product, at least 95 per cent. of which will pass a 300-mesh screen, and by introducing such product among manufacturers of mechanical rubber goods, linoleum, oilcloth, phonograph records, and other products requiring extremely fine-grained filler.

The manufacture of filler road-asphalt mixtures is a promising field for slate-waste utilization. The tonnage of filler used in such asphalt mixtures is very great, one authority estimating that the city of New York alone requires 50,000 tons a year. Preliminary tests indicate that the use of slate flour as a filler in asphalt road surface mixtures would result in improved highways, and that a wide use of such filler would afford a profitable outlet for waste slate with consequent advantage to the slate-producing industries.

The investigations above referred to are described in Bulletin 218, "The technology of slate," by Oliver Bowles, which may be obtained by addressing the Bureau of Mines, Washington, D. C.

## Failures Come in Minutes

—it takes time to build success

You have built a successful business,  
a factory, a home—after years of  
effort. You cannot afford to lose  
all through a single misfortune.  
An hour's fire—a flash of lightning—  
an explosion—Your success may turn  
to failure in a moment's time.

No success is safe unless insured.

### COMMON DEFECTS IN ORDINARY BUILDING CONSTRUCTION

*Why Structural Engineers Should Be Consulted in Their Design*

BY EDWARD GODFREY

There are professions so organized that the services of the members of the profession are forced on the public, whether the public wishes the services or not. Professional engineers have never busied themselves with the matter of forcing unwilling clients to employ them. The various state laws for the registering of engineers are not the work of professional engineering societies and are uniformly considered an annoyance and a useless burden by such engineers.

This article is not an effort to urge compulsory employment of engineers, but it does aim to show that the employment of a structural engineer on any structure of importance is an economic necessity. We have insurance against fire and no matter how careless a tenant may be in the handling of inflammables, the insurance companies generally have to pay. The only insurance against the collapse of a building from structural weakness is that which results from proper design, proper materials and proper execution of the construction.

Without belittling the importance of the other two it can be truly said that if the design is not proper, the possibilities

of disaster are immensely greater than could be imagined with the most careless manipulation and the poorest materials that any contractor would dare to employ. I say this deliberately. Great structures have collapsed in utter ruin; uniformly the cause has been a bad design (or improper planning of the erection which is also designer's work). I could name 40 large structural failures and point out in each one the fundamental error in design that was responsible for the failure. It is true that poor materials and poor workmanship have figured as contributing causes in many of these, but the extent of the disaster could never have resulted from any other principal cause than improper design.

I have always advocated the formulation of rules of design—the elimination of judgment wherever it can be done. Judgment is good and proper and necessary, especially where there is no good rule that has application, and such occasions are very frequent and will always be sufficiently numerous to require the services of an engineer in structural designing. But judgment should be reserved for the things that are not covered by rules of design.

#### *Need for Elimination of Individual Judgment*

1—It should not be left to the judgment of the individual designer what unit stresses may be used for structural materials.

2—It should not be left to the judgment of an owner of the patent on a special system of design to selection of the moments or stresses that may be assumed in the parts of that design, even though those moments and stresses seem to have the support of privately made and privately interpreted tests.

3—It should not be left to the judgment of the individual designer to supply or omit details adequate to the stresses in the members of a structure.

A whole article could be written on each of the above three items.

Under 1 it may be pointed out that stresses on wood of the same grade, as used by different designers, run all the way from 800 to 1800 lbs. per sq. in. Published examples of stress used in steel rods in reinforced concrete run as high as 32,000 lbs. per sq. in., and down to about a third of this.

Under 2, any designer familiar with the literature on "systems" will recall or be able to cite examples of unscientific claims based on still more unscientific and improperly interpreted tests.

Under 3, a volume could be written. It would seem superfluous to say that details should be adequate to take the stress of the members, but it is just here that more violations of engineering principles and common sense are perpetrated than in all other lines of structural engineering combined.

### Errors I Have Seen Made

It would be easy for me to build up a fabric of supposed engineering errors to write to myself. But every case I shall cite is actually work I have seen. Many of these jobs have had the check that city building inspection departments give. It would not be fair to name the structure unless it is already a matter of published information.

On one occasion I wrote up the description of 22 classes of errors in details in one set of drawings, some of them very grievous. The editor asked for the detail drawings, seemingly to check up on the facts in the matter for he did not use them. I sent the prints, with titles cut out. He published the article.

My experience has included the following: Making and checking of designs of buildings and bridges in steel and reinforced concrete to the number of hundreds; inspecting and testing existing structures, such as bridges, buildings, tanks, a hundred or more. Incidentally I have taught in an engineering college. I have been drawn up the side (inside and outside) of many high standpipes, climbed up and down steel towers as high as 200 ft., waded in 18 in. of mud in the bottom of a tank, hung on a suspended ladder over water 30 ft. deep to measure and inspect steel work and sat in the witness chair by the hour while lawyers wrangled over the admission of "the professor's" testimony as an expert. I relate this experience to give the reader a basis for judgment as to the value of this contribution.

### Limiting Value of Handbook Standards

There are two phases of designing. One is the routine phase—seeing that beams and columns and tension and compression members meet the requirements of the specifications and that standard end connections are used on beams. These things are standardized. Handbooks tell the designer just what to do. Certain loads require certain beams when the beams have certain spans and spaces. Columns of given height have standard capacity loads. It is well that these standards exist; they lessen the chances of error. Danger in building construction does not consist in following these standards, but it does consist in the idea that one is apt to acquire that if these standards be followed, a proper engineering structure results.

The other phase of designing is one that requires study of the special features of the case that do not come in the "automatic" class. It is neglect of this phase of designing that gives rise to all structural steel failures. In reinforced concrete I do not hesitate to say that the standards of design are largely at fault, and these will never be safe until engineers recognize that stirrups and

short shear members do not prevent shear failures, and vertical rods near the corners of a concrete shaft do not make a proper column.

Values for column loads in handbook tables are on the assumption that columns are centrally loaded or that the load is balanced. Many designs violate good engineering because the tabular load is used for the columns when the load on the columns is quite eccentric or unbalanced.

Tabular values for beams are on the assumption that the beams are straight. Many designs err because curved beams are used in the same manner in which straight beams are used.

Standard end connections of beams are designed to carry the end reactions of the several beams as a simple vertical shear and are not designed to take cantilever stresses. Many designs are faulty because ordinary beam connections are required to take cantilever stresses.

### Knickerbocker Theatre Failure

The Knickerbocker theatre was weak in every different type of design employed, but had it been of ample strength in the roof slabs, the roof beams, the columns and the main roof truss, with the support of the main roof truss allowed to remain as it was, the collapse would have occurred just as it did. In other words, the routine phase of the design could have been ample and still disaster would have resulted.

This truss was supported on a high wall, built up of an outer facing of brick and an inner shell of tile laid with the cells vertical, laid without any practicable opportunity of making good mortar joints. It is probable that the inner shell yielded, and the resulting slope in the support allowed the truss to slide off. Or the truss, which met the wall at an angle of nearly 45 degrees by successive cycles of expansion and contraction simply worked off the seat laterally.

An engineer, examining the design of this building, would have seen to it that all parts were made in accordance with the rules of good practice. He would also have seen to it that the main truss was properly supported. If his examination had been made after the building was erected, he would have ordered the building closed until adequate truss support were provided and sufficient load bearing capacity supplied for a reasonable snow load.

### Other Examples of Faulty Design

The Majestic theatre in Pittsburgh was an old remodeled church. A ceiling was introduced between the bottom chords of the olden wooden roof trusses. The ceiling joists were ample, their end supports were ample, the routine phase of the design was taken care of but the end wall was bulging and weak. This wall,

# Advance Construction News

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS;

CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

**Theatre Building**, Fifty-second and Chestnut streets, Philadelphia. Architects, Hoffman Henon, Inc., Finance Building, Philadelphia. Owners, Stanley Co. and Nixon Nirdlinger, care of architect. Stone, steel, concrete, brick, terra cotta. Too early for details.

**Chapel and Deanery**, Forty-second and Spruce streets, Philadelphia. Architects, Zantzinger, Borie & Medary, Otis Building, Philadelphia. Owners, Divinity School, Forty-second and Locust streets, Philadelphia. Working plans in progress. Too early for details.

**Residences (29)**, Sixty-eighth avenue, between Seventeenth and Bouvier streets, Philadelphia. Architect, Karl F. Otto, 3 North Nineteenth street, Philadelphia. Owner, N. Axle, 2702 Sheridan street, Philadelphia. Brick, 2 stories, 20x39 feet, slag and tile roof, hardwood and cement floors, hot water heating, electric lighting, tile work. Plans in progress.

**Swimming Pool**, Nineteenth and Hunting Park avenue, Philadelphia, \$45,000. Architect, E. Nelson Edwards, 1012 Walnut street, Philadelphia. Owners, Department of Public Welfare, Bureau of Recreation. Plans in progress.

**Swimming Pool**, Hedge and Orthodox streets, Philadelphia, \$50,000. Architects, Willing, Sims & Talbutt, 129 South Eighteenth street, Philadelphia. Owners, Department of Public Welfare, Bureau of Recreation. Plans in progress.

**Residences (9), Stores and Apartments (5)**, Kensington District, Philadelphia. Architect, Reuben Beard, 607 Shubert Building, Philadelphia. Owner, name withheld. Brick and stone, 2 stories, 16x65 feet, slag roof, oak and pine floors, hot water heating, electric lighting, iron work. Preliminary plans in progress.

**Building (int. alts.)**, 310 South Sixth street, Philadelphia. Architect, Reuben Beard, 607 Shubert Building, Philadelphia. Owner, M. Putter, care of architect. Plastering, hot water heating, electric lighting, tile work, metal lath, carpentry, mill work, flush bulks. Plans in progress.

**Haddington Playground**, Fifty-eighth and Westminster avenue, Philadelphia. Architect, John P. B. Sinkler, 1211 Chestnut street, Philadelphia.

Owners, Department of Public Welfare, Bureau of Recreation. Too early for details. Plans in progress.

**Apartment House**, Thirty-ninth and Walnut streets, Philadelphia. Architect, Reuben Beard, 607 Shubert Building, Philadelphia. Owner, name withheld. Brick and steel, 4 stories, 55x108 feet, slag roof, oak and pine floors, hot water heating, electric lighting, tile work, iron work. Preliminary plans in progress.

**Residences (5), Store and Residence**, Rising Sun avenue and Ruscomb street, Philadelphia. Architect, Karl F. Otto, 3 North Nineteenth street, Philadelphia. Owner, Henry Franz, 5309 North Front street, Philadelphia. Brick, 2 stories, (5) 16x39 feet, (1) 16x49 feet, slag roof, hardwood and cement floors, hot water heating, electric lighting, tile work. J. Joseph McHugh, 1607 Race street, is taking sub-bids.

**Garage and Warehouse**, 5025 Market street, Philadelphia. Architect, Reuben Beard, 607 Shubert Building, Philadelphia. Owner, name withheld. Brick and steel, 2 stories, 20x16 feet, slag roof, cement floors, electric lighting, iron work. Architect is taking sub-bids.

**Store (alts.)**, 2858 Germantown avenue, Philadelphia. Architect, William B. Lowenthal, 1208 Chestnut street, Philadelphia. Owner, A. Berger, on premises. New front, cabinet work, hardwood floors, electric work, marble work, plate glass, metal ceilings, painting, flush bulks. Owner will build.

**Garage**, 930 South Bonsall street, Philadelphia. Architect, private plans. Owner, F. W. Hack, 912 South Twentieth street, Philadelphia. Brick, 1 story, 15x62 feet and 15x35 feet, slag roof, cement floor, electric light, iron work (heating and plumbing reserved). Owner is ready for general bids.

**Store and Apartments (4) and Garages (16)**, Sixty-fifth and Lancaster avenue, Overbrook, Philadelphia. Architect, Reuben Beard, 607 Shubert Building, Philadelphia. Owners, H. Greenberg and H. Slavitt, care of architect. Brick and steel, 2 stories, 16x60 feet, and 1 story, 10x20 feet, slag roof, oak and cement floors, metal tile, hot water heating, electric lighting, tile and marble work. Ready for bids in a few days.

**Residences (4)**, York road and Spencer street, Philadelphia. Architect, Reuben

Beard, 607 Shubert Building, Philadelphia. Owner, Charles J. Schneider, care of architect. Brick and steel, 2 stories, 15x40 feet, slag roof, hot water heating, electric lighting, hardwood floors, tile work. Architect will be ready for bids in ten days.

**Bank Building**, Forty-ninth and Baltimore avenue, Philadelphia. Architect, Norman Hulme, 1524 Chestnut street, Philadelphia. Owners, Belmont Trust Co., care of architect. Brick, cut stone, steel and reinforced concrete, 1 story, 48x73 feet, slag roof, concrete and pine floors, metal lath, tile, marble and terrazzo work, rolled steel sash and skylights, hollow metal doors, iron work. Architect taking new bids due March 2nd.

**Restaurant and Residence**, 4213 Ridge avenue, Philadelphia. Architect, Herman Miller, Crozer Building, Philadelphia. Owner, William Benham, East Park Drive and Calumet street, Philadelphia. Brick and steel, 2 stories and basement, 72x18 feet, slag roof, oak and pine floors, metal lath, tile work, bond, iron work (heating and lighting reserved). Architect taking bids due March 3rd.

**Y. M. H. A.**, Broad and Pine streets, Philadelphia. Architect, Frank E. Hahn, 1112 Chestnut street, Philadelphia. Owners, Y. M. H. A., A. M. Greenfield, chairman, Fifteenth and Chestnut streets. Reinforced concrete, steel, cut stone, brick and limestone, 4 stories and basement, 140x150 feet, slag and tile roof, maple, oak and cement floors, hollow tile, safety treads, roof ventilators, cold water painting, waterproofing and dampproofing, terra cotta, wire work, metal lath, tile and marble work, rolled steel sash and skylights, kalamein doors, bond, iron work, floor hardener, iron stairs (heating, electric work, plumbing and elevators reserved). Architect taking bids due March 12th.

**Home Building**, Broad and Wood streets, Philadelphia. Architects, Andrew J. Sauer Co., Denckla Building, Philadelphia. Owners, Philadelphia Lodge, No. 2, B. P. O. E., Philadelphia. Brick, cut stone, reinforced concrete, granite, limestone, alternate for cast-iron, 14 stories, 198x164 feet, Spanish tile and composition roof, cement, maple, oak and pine floors, elevators, metal weather strip, waterproofing, terra cotta, iron work and stairs, bond, tin clad and kalamein doors,

rolled steel and hollow metal sash, tile, marble and terrazzo, metal lath, steam heat, electric light. Architect taking bids due March 14th.

**Building**, Northwest Corner Ridge and Midvale avenues, Philadelphia. Architect, Herman Miller, Crozer Building, Philadelphia. Owner, Morris Magill, 4176 Ridge avenue, Philadelphia. Brick and steel, 2 stories, 27x20 feet, slag roof, pine floors, metal lath, marble work, bond, iron work. Architect taking bids due March 3rd.

**Catholic High School**, Forty-ninth and Chestnut streets, Philadelphia. Architects, Hoffman Henon, Inc., Finance Building, Philadelphia. Owners, Boys' Catholic High School, on premises. Brick, steel, reinforced concrete and cut stone, 3 stories and basement, 248x108 feet (heating and plumbing reserved), metal lath, tile and marble work, hollow metal sash, rolled steel skylights, hollow metal doors, hollow tile, roof ventilators, waterproofing, bond, iron work. Architect taking bids due March 3rd at 11 A. M.

**Schools (2)**, Seventeenth and Lindley avenue and Fifty-fourth and Berks streets. **Schools (alts.)**, various locations, Philadelphia. Owners, Board of Education, Nineteenth above Chestnut street, Philadelphia. No. 1, general construction, lighting, heating, plumbing and ventilating. No. 2, painting, roof repairs, partitios, etc. Owners taking bids due March 8th at noon.

**Residences and Garages (2)**, Sixty-fifth avenue and Broad street, Philadelphia. Architect, Philip S. Tyre, 1509 Arch street, Philadelphia. Owner, W. W. Moore, Sixty-fifth avenue and Broad street, Philadelphia. Brick, stone, steel and concrete, 2½ stories, 36x38 feet and 9x19 feet, slate roof, oak, pine and cement floors, waterproofing, iron work, hot water heating, electric light. Architect taking bids due March 2nd.

**Addition of Church Building**, Sixty-third and Malvern avenue, Overbrook, Philadelphia. Architect, George E. Savage, Witherpoon Building, Philadelphia. Owners, Overbrook Baptist Church, on premises. Stone and cut stone, 1 story, 54x56 feet, slate and composition roof, pine floors, steam heat, electric lighting, metal lath, tile work, bond, iron work. Architect taking bids due March 12th.

**Residence**, Bustleton, Philadelphia. Architect, Jesse T. Hoekstra, 1713 Sansom street, Philadelphia. Owner, William Lee, care of architect. Stone and cut stone, 2½ stories, 22x30 feet, slate, slag and metal roof, pine floors, hot water heating, electric lighting, cement work. Architect is taking preliminary bids.

**Supplies**, Navy Yard, Philadelphia. Owners, Department of Supplies and Accounts,

Navy Department, Washington, D. C. Delivering lumber, wire rope. Proposals may be obtained from Supply Officer, Navy Yard, Philadelphia, or David Potter, Paymaster General of the Navy, Washington, D. C. Owners taking bids due March 6th.

**Asphalt Paving**, Philadelphia. Bids opened February 20th at noon. Low bidders: Almont street, Buckius to Ash street, \$5,080.38; Frank Mark Cont. Co., 2820 North Twenty-first street, Philadelphia. Barbara street, Moyamensing avenue to Fifteenth street, \$2,413.50; Bermuda street, Orthodox street to Duncan street, \$6,688.50; Broad street, from Seventieth avenue to Fracker street, \$20,655.40; Howard street, from Clearfield to Lippincott street, \$2,168.75; Marvine street, Clarkson avenue to Sommerville street, \$5,181.80; Mulberry street, from Harrison to Wakeling street, \$3,008; Oxford street, from Columbia avenue to Fifty-fourth street, \$7,008.50; Robinson street, from Haddington street to Jefferson street, \$5,032; Barber Asphalt Co., Land Title Building, Philadelphia.

**Paving with Redressed Granite Block**—Sansom street, Twenty-third to Twenty-fourth, \$2,533; Acchione & Canuso, 804 South Twelfth street, Philadelphia. Fifteenth street, Spring Garden street to Girard avenue, \$32,493.20; John Mehan & Sons, 815 West Dauphin street.

**Curbing and Footways**—Reed & O'Rourke, 1213 Cherry street, \$9,376. District 1, Fred Borrelli, 6413 Callowhill street, \$14,670. District 2, Fred Borrelli, 6413 Callowhill street, \$6,005.42. District 3, Ryan Const. Co., Thirty-third and Gray's Ferry avenue, \$11,511.45. District 6, United Paving Co., Colonial Trust Building, \$20,631.50. Districts 5 and 7, United Paving Co., Colonial Trust Building, \$8,462.50.

**Low bidders on Branch Sewer** opened February 21st at noon. Gray's avenue, Forty-ninth street to Fifty-first street, \$5,697.55. A. De Vito, 1721 Hicks street, Philadelphia.

**Main Sewers**. Charles street, Comly street to Duffield street, \$39,985.08; The O'Neill Co., 127 East Mermaid Lane, Philadelphia. **THE TRUSCON LABORATORIES —**

## HARDENED CONCRETE FLOORS DO NOT DUST

It is not necessary to put up with dusting cement floors. Over night a soft cement surface from which the cement dust can easily be scratched with the toe of the shoe—can be transformed into a hard, impenetrable floor that will not “sand” or crumble, even under the hardest foot traffic. Phone or write us for information.

Reinforced concrete, brick and steel, 4 stories, 80x100 feet, and 1 story, 40x41 feet, wing 18x11 feet, Barrett roof, cement and granolithic floors, hollow tile, iron work and stairs, metal lath. Contract awarded to Brillhart Brothers, Bethlehem, Pa.

## New Jersey Construction News

**Factory (add.)**, Trenton, N. J. Architect, William Klemann, First National Bank Building, Trenton. Owners, Mercer Pottery Co., 39 Muirhead street, Trenton. Steel and brick, third story add., 35x100 feet. Too early for details.

**Apartment**, Trenton, N. J. Architect, William Klemann, First National Bank Building, Trenton. Owner, Edward Cook, Broad Street Bank Building, Trenton, N. J. Steel, semi-fireproof, 6 stories, 20-family apartment. Too early for details.

**School**, Morrisville, N. J. Architects, Fowler & Seaman, Fitzcharles Building, Trenton, N. J. Architect, associate, T. B. Stockham, Morrisville, N. J. Owners, Morrisville School Board, Mr. Taylor, secretary, Morrisville, N. J. Brick, hollow tile and steel, 2 stories and basement, 45x170 feet, tile roof, yellow pine floors (heating, electric work and plumbing reserved), hollow tile, safety treads, metal lath, rolled steel sash, fire doors, waterproofing, bond, steel stairs, ornamental iron work. Plans in progress.

**Factory (add.)**, Morrisville, N. J. Architect, William Klemann, First National Bank Building, Trenton, N. J. Owners, Robertson Art Tile Co., Pennsylvania avenue, Morrisville, N. J. Brick, steel, 2 stories, 50x110 feet. Plans in progress. Too early for details.

**Store**, North Broad street, Trenton, N. J. Architect, Walter Hankin, 39 East State street, Trenton, N. J. Owner, Julius Schaeffer, 510 Riverside avenue, Trenton. Fireproof, brick, steel, reinforced concrete, 4 stories, 125x27 feet, slag roof, concrete floors, hot water heat (electric work and heating reserved), tile work, metal lath, roof ventilators, rolled steel sash and skylights. Revised plans in progress.

**High School**, Ocean City, N. J. Architect, V. B. Smith, Guarantee Trust Building, Atlantic City. Owners, Ocean City School Board, care of architect. Fireproof, 3 stories, slag roof, hardwood floors, hollow tile, metal lath, electric light, tile and marble work, roof ventilators, waterproofing and dampproofing, ornamental iron work. Ready for bids due March 8th.

**Court House (alts.)**, Camden, N. J. Architects, Rankin, Kellogg & Crane, 1012 Walnut street, Philadelphia. Owners, Board of Chosen Freeholders of Camden County, James F. Walton, chairman, Court House, Camden, N. J. Painting offices of court rooms, electric work, changing partitions, bond, etc. Owners taking bids due March 10th at 11 A. M.

**Parkway School**, Ewing Township, Mercer County, N. J. Architect, R. A. Schuman, 202 State street, Trenton, N. J. Owners, Ewing Township School Board, C. W. Latham, secretary, care of architect. Brick, 1 story and basement, 115x127 feet, slag roof, pine and

hardwood floors (heating, electric work and plumbing reserved), metal lath, safety treads, roof ventilators, rolled steel skylights, waterproofing and dampproofing, bond, concrete stairs. Architect taking bids due March 1st.

**School**, Ewing Township, Mercer County, N. J. Architect, W. A. Schuman, 202 State street, Trenton, N. J. Owners, Ewing Township School Board, G. W. Latham, secretary, care of architect. Brick, 1 story and basement, 40x115 feet, slag roof, pine floors, steam heat, electric light, metal lath, safety treads, roof ventilators, metal lath, waterproofing and dampproofing, concrete work. Architect taking bids due March 1st.

**Office Building**, Atlantic City, N. J. Architect, V. B. Smith, Guarantee Trust Building, Atlantic City. Owner, A. Freeman, 1516 Atlantic avenue, Atlantic City. Brick, 5 stories, 40x140 feet, slag roof, pine floors, steam heat, electric light, tile and marble work, elevators. Architect taking bids due as soon as possible.

**Residence (add.)**, Woodbury, N. J. Architect, Richard R. Neely, 2126 Pine street, Philadelphia. Owner, S. Polsky, 240 South Broad street, Woodbury, N. J. Brick, 2 stories, 20x30 feet, slag roof, sheet metal work. Owner is ready for bids.

## New Jersey Contracts Awarded

**Residence and Stores (5) (repairs)**, Factory street, Trenton, \$30,000. Architect, private plans. Owner, S. Shankman, care of builder. General fire repairs. Contract awarded to S. Tietz, 252 Jackson street, Trenton, N. J.

## Delaware Construction News

**Residence (alts. and add.)**, Kennett Pike, Wilmington, Del. Architect, E. C. May, Dupont Building, Wilmington, Del. Owner, name withheld. Stone, 2½ stories, 24x50 feet, slate roof, hardwood floors, tile work, electric light, general alterations. Plans in progress.

**Residences (4)**, Twenty-third and Lamotte streets, Wilmington, Del. Architect, John A. McKibbin, Industrial Trust Building, Wilmington. Owners, City Real Estate Co., care of Mr. Lynch, 612 West Ninth street, Wilmington, Del. Brick, 2½ stories, 22x30 feet,

slag, tin and slate roof, pine floors, hot water heat, electric light. Plans in progress.

**Hospital**, Clayton street, between Seventh and Eighth streets, Wilmington, Del. Architect, Frank R. Watson, 1211 Walnut street, Philadelphia. Owners, Sisters of Third Order of St. Francis, Glen Riddle, Pa. Reinforced concrete, steel, brick and cut stone, 3 stories and ground floor, 175x41 feet, wing 35x45 feet, tile roof, cement, composition and oak floors, metal lath, elevators, iron work, bond, hollow metal doors, rolled steel sash and skylights, tile and marble work, steam heating, electric lighting. Architect taking bids due March 6th.

**Residence**, Dover, Del. Architect, private plans. Owner, Dr. C. M. Wharton, Dover, Delaware. Brick, 2½ stories, 30x37 feet, asbestos shingle or slate roof, hardwood floors, steam heat, electric light, tile work. Hope & Harmann, Dover, Del., taking bids due March 10th.

**Residence**, Wilmington, Del. Architect, E. C. May, Dupont Building, Wilmington, Del. Owner, G. H. Markell, 830 Jackson street, Wilmington, Del. Brick, 3 stories, 45x30 feet, slate roof, hardwood floors (heating, plumbing and electric work reserved), tile and marble work. Architect taking bids due as soon as possible.

## Delaware Contracts Awarded

**Store (alts. and add.)**, 702 Market street, Wilmington, Del. Architect, J. A. McKibbin, Industrial Trust Building, Wilmington. Owner, Max Keil, 2103 Boulevard, Wilmington, Del. New plate glass show windows, parquet floors, tile work, steel work. Contract awarded to C. J. Dougherty, 2515 West Eighteenth street, Wilmington, Del.

## Miscellaneous Construction News

**Church**, Norwalk, Conn. Architects, Fowler, Seaman & Co., Fitzcharles Building, Trenton, N. J. Owners, Episcopal Church, Rev. Lewis Howell, Norwalk, Conn. Stone, 1 story and basement, 60x130 feet, slate roof, stone or tile floors, vapor heat, electric light, tile, marble and terrazzo work. Plans in progress.

## Proposals

### SEALED PROPOSALS

Notice is hereby given that sealed bids will be received by James F. Walton, Chairman of the Court House Committee of the Board of Chosen Freeholders of Camden County and opened and read in public at a public hearing of said Committee to be held on Saturday, March 10th, 1923, at 11 A. M., in the Freeholders' Room in the Court House, Camden, N. J., for changes in partitions, electric lighting, etc., of offices of Register of Deeds, Camden County, N. J., in accordance with plans and specifications on file in the office of the Clerk, Court House, Camden, N. J., copies of which may be had by application at the office of Rankin, Kellogg and Crane, 1012 Walnut Street, Philadelphia, Pa.

Bids must be enclosed in sealed envelopes, bearing the name and address of bidder, and the words, "Bids for changes in partitions, electric lighting, etc."

Each bid must be accompanied by a certified check in a sum not less than ten per cent of the bids submitted.

A Surety Bond will be required in the full amount of the contract for the proper completion of the work, and the bidder shall also include in his bid a bid certificate from a surety company.

The Board of Chosen Freeholders reserve the right to reject any and all bids.

JAMES F. WALTON,

Chairman, Court House Committee.

Dated, February 19, 1923.

### SEALED PROPOSALS

Notice is hereby given that sealed proposals will be received by James F. Walton, Chairman of the Court House Committee of the Board of Chosen Freeholders of Camden County, and opened and read in public at a public hearing of said Committee to be held on Saturday, March 10, 1923, at 11 A. M., in the Freeholders' Room in the Court House, Camden, N. J., for Painting of Offices, Court Rooms, etc., of Camden County Court House, Camden, N. J., in accordance with plans and specifications on file in the Office of the Clerk of the Board of Chosen Freeholders, Court House, Camden, N. J., copies of which may be had by application at the offices of Rankin, Kellogg & Crane, 1012 Walnut Street, Philadelphia, Pa.

Bids must be enclosed in sealed envelopes, bearing the name and address of the bidder and the words, "For Painting, etc."

Each bid must be accompanied by a certified check in a sum not less than ten per cent. of the bid submitted.

A surety bond will be required in the full amount of the contract for the proper completion of the work, and the bidder shall also include in his bid a bid certificate from a surety company.

The Board of Chosen Freeholders reserve the right to reject any and all bids.

JAMES F. WALTON,

Chairman of Court House Committee.

Dated February 19, 1923.

**Repetition tends to create habit, the more often we see, do or hear a thing, the quicker we are likely to be influenced by it. The consecutive appeal of a number of advertisements will develop certain memories and associations tending to overcome the natural habit of procrastination.—Making advertising pay.**

(Continued from Page 132)

in its bulging condition, was reinforced by a long channel, with web horizontal, curved to fit the wall, the channel being anchored at the ends into the wall itself.

Engineering judgment would have dictated a new wall. Also engineering judgment would have perceived the progress of failure when the end wall showed unmistakable signs of continued bulging. An engineer, examining this building before a large section of the ceiling dropped on the seats and smashed to splinters, while seats just behind these were occupied by spectators, would have dropped his book of tables and rules and devoted his attention to the serious problem presented. He would have seen to it that measures were taken at once to avert the calamity.

### Double-Shell Wall Failure

A school building was being constructed with bearing walls consisting of outer shells of hard face brick, non-absorbent, with thin mortar joints. The inner shells were absorbent bricks with thick mortar joints and tile, also with thick mortar joints. When the load came on these walls, one of them buckled out very badly, because the inner shell yielded, and the outer shell received the load, which it was too thin and high to take.

Another wall collapsed dropping a large portion of the floor, which was reinforced concrete. Reinforced concrete was wrongly blamed for the failure until a test was made on similar floor construction. The test proved that the routine phase of the design had been at least approximately correct. But engineering examination revealed the fact that two ones do not always make two. One pint of oil and one pint of water do not make a quart of anything; it will always be two separate pints. A rigid element and a yielding element will be two separate things and not a unified support for carrying loads.

### Economy of Good Design

A large school building was under roof. The steel roof beams were weak, steel columns were weak, reinforced concrete columns were weak, some reinforced-concrete beams showed stresses up to the ultimate strength. Walls were inadequate. These are the things discovered by an engineer who was called in. Without disturbing any finished construction, these faults were all remedied.

In this case routine designing was deficient to the extent that there might have been a disastrous failure. The designing that means a special problem of each structure was also lacking. If this design had been given to an engineer to check before construction was begun, instead of the practice being followed of farm-

ing out the designing to concerns who supplied the materials, all of these errors would have been avoided.

It does not require any special pleading to demonstrate the economy of taking care of such matters before work is begun, even when the errors are caught before the work is finished. The expense and anguish that might have resulted had collapse occurred after its completion might have been very great. No sum of money could compensate for the loss of children's lives that might have been sacrificed to a practice that ignores the expert to save his paltry fee of a few hundred dollars.

### Inadequate Foundations

A large hospital building was designed by an architect. He employed an engineer to design the beam and column work and the column foundations. For the wall foundations he obtained from the engineer the running load on the footings for exterior walls, which were bearing walls, but he did not consult the engineer as to the size of footings necessary to carry those loads on the soil. The building was constructed on footings for the bearing walls that were about half as wide as they should have been. The footings sank under their loads, and large parts of the exterior walls had to be rebuilt. The architect's professional career, a promising one, was ended by this occurrence.

### Mix Common Sense with Mathematics

The Orpheum theatre in New York collapsed, just after about 200 workmen left at quitting time. About a year later expert reports were finally completed and published, including tests of material of a "bystanding" and innocent girder on which the greater part of the heavy roof fell, causing a splice plate to break short. Also later an expert with a secondary stress theory from the other side of the Atlantic ocean told the alleged cause. Five minutes cursory examination of the plans was enough to tell without a scintilla of a doubt exactly what made the structure collapse. An enormous curved girder, with 72-ft. span and a 12-ft. versed sine (projection from the line of the supports), connected at the ends to slender columns, was the complete explanation. This explanation was not given in any of the "expert" reports.

### Building Laws Do not Insure Safe Design

In the first part of this paper I hinted that the examination given by building inspection departments is not a guarantee of the safety of buildings. In the nature of things, it is routine—an examination to see that certain rules of design or laws are carried out. If carefully made, the examiner will see to it that his examination eliminates any skinning

in the design. But a design does not need to be skinned for the structure to fail. One blunder in stability, or equilibrium, or bracing, or details may be enough to bring down the whole structure. Sometimes, if the law "leans backward" the department will ignore it and substitute judgment. Here is the best example I know of the need of a more liberal law and a more rigid application of that law—the elimination of judgment.

In a certain large city the law requires that high buildings be designed for wind loads that increase, in the upper stories, to 35 lbs. per sq. ft. I was checking a 20-story building in that city. Common practice and the design of the building convinced me that it was out of the question to provide, in the columns of this building, particularly the first-story columns, resistance enough in the steel work to bring the stresses down to anything like those allowed by the building code. I endeavored to find out from the building department if they had any rule of practice whereby part of the wind load could be assumed as carried by the general stiffness of the walls and partitions but I was informed that they had no such rule and that the steel work alone must resist the wind. Then I asked the designer for his method of figuring the wind moments in the columns. I was supplied with calculations showing by an elaborate system the distribution of moments among the columns. I saw at once that the columns as designed were subject to stresses greatly exceeding those allowed by the code by these moments.

The building department had already passed the plans. On my part I was willing to ignore a large fraction of the wind load. Also I was willing to brush the elaborate system of the moment distribution aside and take the average for the moment on the whole set of columns—even to apportion to the heavier columns greater shear and moment—to take advantage of every pound of steel already in the columns, in spite of high theory. But I was not satisfied with the design of the columns.

A conference of engineers was called. I pointed out that the design moments in the columns were not taken care of in the design as it existed. The answer was that the average moment should be used. I said, "All right, I will accept the average. Still the moments are high." But they said, "The depth for moments is not the full story height, as shown, but the clear height." "All right," I said, "take the clear height. Still the moments give excessive column stresses." "But," they said "column stresses are not to be taken here; the stresses are at the ends of columns." "These are too high," I said. "Yes" they said, "but do you not allow 50 per cent. excess instead

of the code 30 per cent. for wind?" I agreed to accept the design if 60 tons of steel were added to the columns, not to make it come up to the absurd building law, but to supply the rigidity commensurate with the demands of good construction.

The building law just referred to gives an opportunity for the grossest kind of injustice. The execution of this law is entirely arbitrary. No engineer could have maintained that that building as designed met the law. Hence a building inspector could force prohibitive design on a builder, if for any reason he did not want to pass the plans. I will not follow this lead any further by citing the examples.

In the case of the city code referred to, it would be sufficient and sound engineering if the law provided that one-half of that wind load (which is very high for large surfaces) should be provided for solely in the steel work with unit stresses not to exceed about 14,000 lbs., dividing the bending moment among the columns in proportion to the ability to resist it. Two designers on different sides of the world would then get substantially identical results. As it is now, no two designers could possibly arrive at similar results unless it was by accident.

—National Builder.

### NECESSITY FOR WATER-PROOFING

We must realize that the general application of waterproofing must prove of great advantage to society, since its function is to greatly increase the life of those structures in which it is judiciously used, and what is of more importance, to secure to the dwellers therein immunity from the diseases which are fostered or spread by damp, clammy walls and the unwholesome conditions incident thereto.

It is scarcely necessary, however, to dwell upon the sanitary aspect of the question, since it is a fundamental principal of hygiene that dry habitations are necessary if we would enjoy the normal degree of health.

We take the precaution of draining our cellars into sewers but, with a similar inconsistency do we not often fail to protect them against becoming moisture-soaked and unsanitary? Large sums are expended in the construction of costly reservoirs, tanks and dams and frequently the precaution of conserving the water thus expensively stored is ignored, when this conservation might have been effected by providing a water-tight enclosure, thus guarding at the same time against either a contaminating inflow or a wasteful outflow.

We erect stately mansions of artistic designs, costly material and skilled work-

manship, and before many years have passed, their exterior beauty is frequently defaced by stains or by the unsightly efflorescence, all of which is easily preventable if the simple expedient of waterproofing is adopted while the building is in the early stages of construction.

Thousands of dollars are spent in providing efficient sewage disposal plants, but often the neglect to make the sewers water-tight, results in the pumping and disposal plants being burdened with the handling of ground water, which, in many cases, equals the entire volume of sewage flow, increasing the maintenance cost perhaps 25% or more.

In the erection of expensive concrete super-structures, it too often happens that lack of provision for waterproofing, or a defective system, causes the building to be unfit for occupancy and entails upon the owner serious financial losses. Too often are our buildings put up with all possible speed, in the hope of saving time and money, and, before the walls have been given time to lose the large quantities of water stored up by rains or by water used during the construction period, paint is applied to the outside, plaster to the inside, only to find that after a comparatively short time, due to the pernicious activity of moisture, first one and then the other begin to loosen, peel and go to pieces.

The majority of these cases are not due to the improper preparation of specifications but rather to a sense of false economy on the part of the buyer in the effort to select the lowest bids. Consequently the work, when finished and expected to be perfectly dry, turns out to be leaky and troublesome, necessitating expensive repairs, thus making the first cost but the beginning.—Right Angle.

### CITY ZONING PLAN

*Proper System Will Give Equal Consideration to Manufacturing and Residential Districts*

By W. F. DODD, Attorney at Law, Chicago

The city of Chicago is now being zoned, and so, also are a number of other cities in Illinois. Twelve cities of the State have already been zoned.

The term "zoning" has come to be applied to the working out of a general districting plan for the future development of a city, so that different and conflicting uses of property will not be permitted over the same area. Zoning contemplates therefore, that the portions of a city which should most appropriately be devoted to residence purposes should not be encroached upon by industrial establishments and business enterprises. But zoning equally contemplates that manufacturing areas shall be established and pre-

served, and that such areas shall not be interfered with by other and conflicting uses. This subject was definitely presented in the report of the Illinois Housing and Building Commission in 1921. This commission said:

"The commission desires to emphasize the fact that zoning plans are not intended merely for the protection of residential districts, but that any zoning legislation and ordinances thereunder should be devised with equal reference to the protection and development of manufacturing and commercial interests of the community."

The purpose of zoning is to avoid an intermixture of factories, stores, apartments and private residences, and to provide adequately for each without injuring the others.

#### *Zones For Manufacturing*

Zones for manufacturing purposes are just as important to the welfare and continued prosperity of the city, as are residential zones. Their needs are of course different, and manufacturing zones must be planned with reference to transportation and power facilities. For a successful manufacturing enterprise there is need for permanent factory locations, easily accessible to power and transportation, and with near-at-hand residence facilities for a working population which can live under proper conditions. In a city as large as Chicago there can of course be no one manufacturing area and no one residence area, but there must be a number of manufacturing and residence areas, in such relationship to one another that industry may be adequately conducted.

The Illinois zoning law of 1921 properly recognizes that no zoning plan should interfere with existing rights. This law provides that "due allowance shall be made for existing conditions, the conservation of property values, the direction of building development to the best advantage of the entire city, village or incorporated town and the uses to which property is devoted at the time of the enactment of such ordinance. The powers by this act given shall not be exercised so as to deprive the owner of any existing property of its use or maintenance for the purpose to which it is then lawfully devoted."

The legislation under which the city of Chicago is being zoned, therefore, explicitly lays down a rule for the protection of the business interests of the community.

#### *Illinois Zoning Act*

Under the Illinois zoning act of 1921, cities are permitted to develop plans for their future growth which will best conserve property values, and the welfare of all business and other interests. The zoning contemplated and authorized by this legislation is entirely different from the

type of local action held improper by the Illinois Supreme Court in the cases of the *People vs. Kaul*.

This case dealt with the effort of the village of Forest Park unduly and improperly to restrict factory uses of property. The Forest Park restriction was not based upon any carefully and deliberately worked-out plan with respect to the whole community. The case in which the action of Forest Park was held improper has, therefore no bearing upon plans for comprehensive zoning of a city.

There has been no judicial decision as yet sustaining the Illinois Zoning Act of 1921, or actions of a municipality thereunder. However, zoning legislation and the local exercise under such legislation of power to zone have been upheld in other states and the issue will probably be decided in favor of such powers, when a case presents itself in this state. The Illinois constitutional convention has expressly provided in section 62 of its proposed new constitution that the general assembly shall have power to authorize zoning by local communities.

An appropriately devised plan of municipal zoning should be of advantage to all of the industries within the community. However, an adequate plan for municipal zoning does not develop without the interest and co-operation of the citizens. The manufacturing interests of Chicago have nothing to fear from a properly devised scheme of zoning, and they have much to gain by co-operating with those who are working out the plan, by suggesting and advising with respect to the details of that plan.

#### *A Zoning Commission*

Under the zoning Act of 1921, the details of a zoning ordinance are worked out by a zoning commission. The Chicago zoning commission has already gone a long way toward completing a detailed survey of property uses within the city of Chicago. This commission has sought the advice and assistance of citizens as its work has progressed. The law provides that "after the preparation of such tentative report and ordinance, the commission shall hold a hearing thereon and shall afford persons interested an opportunity to be heard." No zoning will be permanent unless it meets the needs of all important groups in the community. In order to meet these needs each group should take an interest in the tentative zoning plans, and should be fully prepared to present any views which it may have when the tentative report and ordinance come to be submitted to public hearings. No legitimate interest is likely to be hurt if that interest pays some attention to its own problems and needs with respect to zoning. The time to pay attention to these problems is before the

zoning ordinance is finally adopted. It is foolish to wait until final action has been taken, and then seek to make contests in the courts, if adequate relief from threatened injury may be obtained without litigation.

The Chicago plan has contributed greatly not only to the attractiveness of Chicago but also to its wealth and economic resources. Zoning properly conducted will supplement the Chicago plan and also contribute largely to the economic effective of the city. Zoning plans now being worked out in Chicago and in other cities of Illinois should not be compared with so-called piecemeal zoning, as it has been applied in some cities.

*Manufacturers' News.*

#### BUILDING WITH SAFETY

How to check plans and specifications for safety is told in a pamphlet just issued by the National Safety Council, Chicago, containing a check list of several hundred items which must be considered if serious hazards are to be avoided.

The pamphlet, which has been prepared under the supervision of the Council's Safe Practices Committee of 75 safety engineers, points out that proper precautions are taken when drawing plans and specifications for new buildings or equipment, many accident hazards can be forestalled—an important matter to the plant engineer in these days of increasing pressure from Government and insurance inspectors, compensation laws, and plant safety departments. Such engineering revision removes at little or no cost hazards which later could be corrected only at heavy cost if at all, and insures compliance with both Government and insurance demands, the latter resulting in premium reduction.

For detailed information on each of the points covered, the contractor is referred to various standards and handbooks, a list of the principal authorities being given, with cross references from the check list.

This is a valuable pamphlet for contractors to have.

The other day a prominent local architect called up to inquire regarding a concern that has not advertised with us for two years. "I saw their ad. some years ago in the Guide," said the architect, "and am unable to recall just where they are located." We gave him the address and learned subsequently that as a result the firm bagged a big order. How many similar orders, from architects who wouldn't take the trouble to look them up, that same concern has missed in the course of the past two years it would interest us to know.

The impractical dreamers are not the architects, but the clients themselves, as a rule.

## Failures Come in Minutes

—it takes time to build success

You have built a successful business,  
a factory, a home—after years of  
effort. You cannot afford to lose  
all through a single misfortune.  
An hour's fire—a flash of lightning—  
an explosion—Your success may turn  
to failure in a moment's time.

No success is safe unless insured.

## As The Editor Sees It

In his letter of acceptance of the report of the Building Code Committee of the U. S. Department of Commerce, Secretary Hoover well expressed the objects aimed at in the preparation of "Recommended Minimum Requirements for Small Dwelling Construction." "I am confident that the generous and voluntary contribution of time and energy which you and your colleagues have given to this work will result not only in a very appreciable money saving to millions of American families, but that it will have a positive influence toward better housing that cannot be counted in dollars."

"I join with you in the belief that it will be helpful not only through practical use by municipalities in building codes and in promoting greater uniformity in codes throughout the country, but that with its appendix, it will prove directly useful to owners and builders of dwellings generally."

The methods and practices now in use in the design and construction of dwelling houses are the result of blindly following tradition and past custom. There seems to be no other reason for the thickness of masonry walls used for ordinary one and two-story dwellings than a survival of the belief that such walls should act to a large extent as parts of a fort.

Engineers and architects have doubtless previously made the simple computations necessary to show that the actual

loads coming upon the walls of the ordinary one or two-story house are ridiculously small and are, in fact, only a small percentage of the working loads which engineers long have used in the design of large and important bridges and buildings.

An understanding was soon gained by Mr. Hoover of the woeful lack of definite provisions in the majority of building codes throughout the United States in regard to the minimum requirements for dwelling house construction. In conformity with his general plan of reducing all the lost motion possible, he conceived the idea of having prepared a standard practice based not on inherited practices but on the real need for strength in small buildings.

The Recommended Minimum Requirements for Small Dwelling Construction which resulted from the appointment of a Building Code Committee removes many of the unnecessary limitations which the common practice in house construction seemed to require and for which the home owner has to pay. Instead of 12 inch brick walls for two-story buildings a thickness of 8 inches is permitted.

Recognition is also given to types of construction other than those so well known. The use of concrete both plain and reinforced is provided for in the code and recognition of the strong monolithic character of this structural material is given by allowing exterior walls to

be 5 inches thick. The thickness of walls of hollow building tile and hollow concrete block is also placed more clearly on a basis of the actual strength of these walls than on arbitrary requirements. Walls of hollow building tile or hollow concrete block 8 inches thick are allowed for the uppermost 20 feet of buildings limited to 30 feet high.

The use of reinforced concrete is placed on the same general basis as large buildings and bridges, examples of which have become so numerous and well known. Dwellings of this type may be designed in accordance with the well recognized principles of reinforced concrete design to withstand the loads to which they will be subjected. However, certain requirements are provided which are based more on the practical work of getting the concrete into the forms. Double walls of concrete providing an insulation air space may be constructed with 6 inch aggregate thickness of concrete cast in place. The use of large precast units each of which may be story height and form an entire one-story wall of one side of the house is permitted. Concrete houses provided with a reinforced concrete framework similar to that used in large buildings but with enclosing and partition walls of concrete plastered on metal lath are permitted in this promise of developing firesafe types and low costs are provided for in the code. In fact, new methods of construc-

tion which give great promise of developing firesafe types and low costs are provided for in the code.

The minimum provisions of this code are safe. They are the result of careful work by a committee which has no other interest than to serve the public to the best of its ability. This committee had at its disposal the most complete compilation of information that has ever been assembled by any committee working on the subject of house construction. Adoption of the code or at least incorporation of the important major parts of its provisions into city building regulations is the next step to make this valuable work of Mr. Hoover's building code committee the means of reducing the cost of dwellings, without any sacrifice of required strength or fire-safeness. In fact, the opportunity which it gives for invention and the exercise of engineering and architectural skill will insure that these objects will in the end be attained for less cost than at present.

#### HUGE PROBLEMS IN ELIMINATION OF WASTE ATTACKED BY COMMERCE DEPARTMENT

*Housing Division Chief Sees Tremendous Savings Through City Planning, Zoning, and Wisely Built Houses*

That hundreds of millions of dollars are lost every year as a result of the lack of proper zoning laws, was a statement made by Dr. John M. Gries, Chief of the Division of Building and Housing of the Department of Commerce, before officials of the Bureau of Standards in a talk outlining some of the work his division is doing.

Dr. Gries stated that the large amount is lost in the form of scrapped buildings and depreciated real estate values, resulting from the intrusion of undesirable commerce into residential districts. The present situation in many cities Dr. Gries compared to a house in which the bookcase is in the bathroom and the kitchen stove in the parlor. He explained that in some of the better residential districts the value of each house may be reduced a thousand dollars or more through the construction in that district of a factory or other structure not properly belonging there.

Dr. Gries recommended adequate zoning laws as a preventive, and explained how the Division is co-operating with communities all over the country that are preparing zoning regulations. A Zoning Primer and a "standard state zoning enabling act" authorizing cities to zone have been widely distributed. He also stressed the necessity for city plan-

ning in municipalities expecting to grow, and stated that the Division was preparing data on this subject which will be made available.

Figures were given showing the relative importance of the different items of construction costs for a certain house. Of these, labor charges accounted for only 26 per cent.; materials cost 29.3 per cent.; land, 19 per cent.; contractor, 12.6 per cent.; financing, 6.7 per cent.; architect and real estate fees, 6.4 per cent. These figures show that it is not generally possible to blame one single factor, such as high labor or material costs, for high prices of houses. He said that while the daily wage of building tradesmen might seem high to a man employed all the year, they were not necessarily high when the seasonal character of the employment was considered. He said a substantial saving in labor costs could be realized if arrangements could be made for employment during a larger part of the year. He also said similar savings in costs of equipment and contractors' overhead could be effected by a more extended building season.

It was pointed out that the Building Code Committee of the Department of Commerce, appointed by Secretary Hoover, has recently published a report entitled "Recommended Minimum Requirements for Small Dwelling Construction." It covers one and two-family dwellings, with an extensive discussion of the reasons for the requirements, and the best types of construction for various purposes. Dr. Gries said that this pamphlet should prove useful to architects and prospective home owners. In this connection, many tests were performed at the Bureau of Standards to determine the strength, fireproofness, and other qualities of types of building construction, the Bureau having made available for that purpose a huge testing machine in which full size sections of walls can be crushed to determine the strength, and a furnace in which their resistance to fire can be tested.

Among other things, this book shows that eight-inch walls are strong enough for two-story houses, and three stories under certain conditions. It recommends that they be permitted instead of the twelve-inch walls now required in many codes.

Floor loads of forty pounds per foot for timber construction, and thirty for monolithic types, are considered sufficient as a basis for calculation of strength, instead of the sixty and seventy pound loads now required in some cities.

The Plumbing Code Committee is making out a report dealing with the rules and regulations necessary for plumbing equipment. Many of these are based on tests which have been made on plumbing equipment at the Bureau of Standards,

Shipped as dry Crystals, for making Concrete Floors Hard as Iron  
**THE TRUSCON LABORATORIES**

## HARDENED CONCRETE FLOORS DO NOT DUST

It is not necessary to put up with dusting cement floors. Over night a soft cement surface from which the cement dust can easily be scratched with the toe of the shoe—can be transformed into a hard, impenetrable floor that will not “sand” or crumble, even under the hardest foot traffic. Phone or write us for information.

**Residence**, Margate, N. J. Architect, J. S. Connaroe, 225 South Sydenham street, Philadelphia. Owner, name withheld. Frame, 2½ stories, shingle roof, pine floors, electric lighting. Plans in progress.

**Store House (add.)**, Morris Plains, N. J. Architects, Department of Institutions and Agencies, Division of Architecture and Construction, Trenton, N. J. Owners, State Hospital, care of Dr. M. A. Curry, Morris Plains, N. J. Brick, 1 story add., 83x48 feet, tin roof, maple floors, electric light. Architects ready for bids due March 19th.

**Residence (alts. and add.)**, Flemington, N. J. Architects, William Slack & Son, St. Regis Theatre Building, Trenton. Owner, Norman Landis, Flemington, N. J. Metal lath, stucco covered, 2½ stories, 30x30 feet, hardwood floors, tile work, plumbing, general interior and exterior alterations. Owner will take bids.

**Residence**, Avon, N. J. Architect, William Klemann, First National Bank Building, Trenton. Owner, Mrs. H. Shield, Flemington, N. J. Frame, 2½ stories, 30x35 feet, slag roof, hardwood floors, electric light. Owner taking bids.

**Residence**, Bordentown, N. J. Architects, Fowler, Seaman & Co., Fitzcharles Building, Trenton. Owner, Harned Reeder, Bordentown, N. J. Frame, 2½ stories, 32x36 feet, shingle roof, hardwood floors, hot water heat, electric light, tile work. Owner taking bids.

**Hotel (alts. and add.)**, Atlantic City, N. J., \$40,000. Architect, Bertram Ireland, Guarantee Trust Building, Atlantic City. Owner, Meyer Waggenheim, Connecticut and Atlantic avenues, Atlantic City, N. J. Brick, 3 stories, 100x175 feet, slag roof, hardwood floors, electric light, general interior alterations. Owner is ready for sub-bids.

**Stores (8), Apartments (6)**, 4200 Ventnor avenue, Atlantic City. Architect, Bertram Ireland, Guarantee Trust Building, Atlantic City. Owners, Yarmov & Shenkman, Guarantee Trust Building, Atlantic City. Brick, stone, 3 stories, 80x170 feet, slag roof, hardwood floors, hot water heat, electric light, tile and marble work, terra cotta. Owners will build.

**Factory**, Trenton, N. J. Architects, Fowler & Seaman, Fitzcharles Building, Trenton, N. J. Owners, New Jersey Porcelain Co., care of architects. Brick, steel, 1 story, 200x250 feet, slag roof, concrete and wood floors, electric light, fire doors. Architect taking sub-bids.

**Store**, North Broad street, Trenton, N. J. Architect, Walter Hankin, 39 East State street, Trenton, N. J. Owner, Julius Schafer, care of architect. Brick, steel, reinforced concrete, fireproof, 4 stories, 125x27 feet, slag roof, concrete floors (heating and elevators reserved), electric light, metal lath, tile work, rolled steel sash and skylights, roof ventilators. Architect taking revised bids due as soon as possible.

**Court House (alts.)**, Camden, N. J. Archi-

tecs, Rankin, Kellogg & Crane, 1012 Walnut street, Philadelphia. Owners, Board of Chosen Freeholders of Camden County, James F. Walton, chairman, Court House, Camden, N. J. Painting offices, electric work, changing partitions, bond. Owners taking bids due March 10th at 11 A. M.

**Store (add.)**, 933-35-37 Broadway, Camden, N. J. Architect, Sol Kaplan, 10 South Eighteenth street, Philadelphia. Owner, M. Fuhrman, on premises. Brick, steel and concrete, 2 stories, 60x52 feet, slag roof, maple floors, elevator, iron work, bond, tin-lined doors, hollow metal skylights, steam heat, electric light, metal lath. Architect taking bids due March 9th.

**High School**, Ocean City, N. J. Architect, Vivian B. Smith, Guarantee Trust Building, Atlantic City, N. J. Owners, Ocean City School Board, Ocean City, N. J. Brick and steel, fireproof, 3 stories, 194x191 feet (heating, plumbing and electric work reserved), slag roof, hardwood floors, metal lath, hollow tile, tile and marble work, roof ventilators, waterproofing, dampproofing, terra cotta, ornamental iron work. Owners taking bids due March 8th.

**School**, Oaklyn, N. J., \$50,000. Architect, Clyde S. Adams, 2038 Spruce street, Philadelphia. Owners, Oaklyn School District, Adolph Jost, Oaklyn, N. J. Brick and frame, 2 stories, 59x146 feet, hollow metal skylights, slate and slag roof, pine floors, electric light, unit system heating. Plans completed. Owners taking bids due March 21st.

**Freight House**, East Trenton, N. J. Architect, private plans. Owners, Philadelphia & Reading R. R. Co., Reading Terminal, Philadelphia. Brick and steel, 1 story, 30x75 feet, built-up asbestos roof, pine floors, iron work, bond, rolled steel sash, electric lighting. Owners taking bids due March 8th.

**Residence**, River road, Trenton, N. J. Architect, J. O. Hunt, Hunt Building, Trenton, N. J. Owner, Lewis B. Traver, 295 Hamilton street, Trenton, N. J. Frame, 2½ stories, 24x45 feet, slate roof, hardwood floors, steam heat, electric light, tile and marble work. Architect taking bids due March 9th.

**Dairy and Animal Husbandry Building**, New Brunswick, N. J. Architects, Department of Architecture and Construction, Trenton, N. J. Owners, State of New Jersey, Dr. Lipman, Agricultural College, New Brunswick, N. J. Lowest bids submitted by G. B. Rule, New Brunswick, N. J., \$134,900; Gibbs-Mueller Co., 215 South Broad street, Philadelphia, \$159,989. Plumbing, David Buist, New Brunswick, N. J., \$8,990. Heating, David Buist, New Brunswick, N. J., \$14,900. Electric, Jackson Electric Co., 40 Belvidere avenue, Trenton, N. J., \$7,780.

**School**, Verga, N. J. Architects, Sanders & Young, 39 South Seventeenth street, Philadelphia. Owners, West Deptford Township School Board, Lewis K. Wilkens, Thorofare, N. J. Frame, stucco, brick and steel, 1 story, 78x72 feet, slate roof, maple floors, metal lath, marble work, bond, iron work. Owners taking bids due March 20th at 7 P. M.

**High School**, Gaston street, West Orange, N. J. Architects, Guilbert & Betelle, 546 Broad street, Newark, N. J. Owners, Board of Education, West Orange, N. J. Brick, concrete and steel, 3 stories and basement, 230x105 feet, auditorium, 47x78 feet (plumbing, heating, ventilating, electric work, grading, roads, separate bids). Owners taking bids due March 26th at 8 P. M. Deposit, \$25.00. Refund \$25.00. Albert Wrensch, secretary, West Orange, N. J.

I make it a rule never to write a grouchy letter—I telephone.

## New Jersey Contracts Awarded

**Office and Manufacturing Building,** Camden, N. J. Architects, The Ballinger Co., Twelfth and Chestnut streets, Philadelphia. Owners, Warren Webster Co., Camden, N. J. Brick and steel, 2 stories, 180x340 feet, slag roof, cement floors, electric lighting, tile work, rolled steel sash and skylights, floor hardener. Contract awarded to Austin Co., Bulletin Building, Philadelphia.

**Garage,** Trenton, N. J. Architect, William Klemann, First National Bank Building, Trenton. Owner, Edwin Cook, Broad Street Bank Building, Trenton, N. J. Brick, steel, 1 story, 60x150 feet, asbestos shingle roof, cement floors, steam heat, electric light, steel sash, kalamein doors. Contract awarded to Thomas Day & Son, Fitzcharles Building, Trenton, N. J.

**Parkway School,** Ewing Township, Mercer County, N. J., \$39,869. Architect, R. A. Schumann, 202 State street, Trenton, N. J. Owners, Ewing Township School Board, C. W. Latham, secretary, care of architect. Brick, 1 story and basement, 115x127 feet, slag roof, pine and hardwood floors (heating, electric work and plumbing reserved), metal lath, safety treads, roof ventilators, rolled steel skylights, waterproofing, dampproofing, bond, concrete stairs. Contract awarded to Frank J. Nardy Co., 3840 Spring Garden street, Philadelphia.

**School,** Ewing Township, Mercer County, N. J., \$17,950. Architect, R. A. Schuman, 202 State street, Trenton, N. J. Owners, Ewing Township School Board, G. W. Latham, secretary, care of architect. Brick, 1 story and basement, 40x115 feet, slag roof, pine floors, steam heat, electric light, metal lath, safety treads, roof ventilators, metal lath, waterproofing, dampproofing, concrete work. Contract awarded to Frank J. Nardy Co., 3840 Spring Garden street, Philadelphia.

**Y. W. C. A. Building,** Camden, N. J. Architects, Lackey & Hettle, 509 Market street, Camden, N. J. Owners, Y. W. C. A., Mrs. E. G. Bleakly, secretary, Camden, N. J. Reinforced concrete, brick, cut stone and steel, 4 stories and basement, 103x68 feet, promenade tile and slag roof, maple, cement and linoleum floors, elevators, metal ceilings, waterproofing, dampproofing, iron work, iron stairs, bond, kalamein and hollow metal doors and skylights, tile, marble and terrazzo work, metal lath, steam heating, electric lighting. Contract awarded to J. M. Yardley, 1716 Sansom street, Philadelphia. Electric, Strang Electric Co., 214 South Seventh street, Philadelphia. Heating, Camden Heating Co., Camden, N. J. Plumbing, W. J. Kelley, Camden, N. J.

## Miscellaneous Construction News

**Factory Building,** Wilmington, Del. Architect, private plans. Owner, name withheld. Brick and steel, 3 stories and basement, 81x82 feet, slag roof, maple floors, electric lighting, rolled steel sash. Contract awarded to John N. Gill Const. Co., Otis Building, Philadelphia.

**Grade School,** Aberdeen, Md. Architects, Hamme & Witman, City Bank Building, York, Pa. Owners, School Commission of Harford County, Md., care of M. A. Wright, Belair, Md. Brick, semi-fireproof, 2 stories, 8 rooms. Preliminary plans in progress.

(Continued from Page 148)

and are expected to make possible substantial economies as compared with many of the regulations now in effect.

Good house plans eliminate waste by striking at the source, and the division co-operates with the Architects' Small House Service Bureau, a non-profit making organization which has already prepared a series of over two hundred plans for houses of from three to six rooms. These plans are available at costs averaging about \$25.00 for complete working drawings, specifications, bills of materials, and contract forms.

The Small House Bureau designs represent the best modern practice, and make it possible for the man of moderate means to embody in his house the economies and many of the less expensive conveniences ordinarily embodied in the larger houses whose owners can afford to hire an architect. As standards of building construction and of materials are developed as a result of the recommendations and experiments of the Department of Commerce, they will be included in the designs.

Different types of houses have been designed to meet the climatic conditions of different parts of the country as well as differences in materials available and in the income of home builders.

### SAFE CONSTRUCTION OF BUILT-IN GARAGES

"Motorists who keep their cars in built-in garages, or garages attached directly to the side of their dwellings do not run an undue fire risk if they follow certain elementary precautions," states Mr. Ira H. Woolson, chairman of the Building Code Committee of the Department of Commerce, and consulting engineer of the National Board of Fire Underwriters, in an interview just given out. "We covered the subject of built-in garages for one and two-family houses quite thoroughly in the Recommended Minimum Requirements for Small Dwelling Construction that have just been published by the Department of Commerce," states Mr. Woolson, "and gave directions for constructing them safely, that can be followed by any competent builder.

"If a built-in garage is not properly constructed, it is a menace to life and property. Our investigations showed that if a fire does start in a single or two-car garage, it is not likely to be more severe

than would be withstood by the construction classed as affording one hour fire resistance by the Bureau of Standards of the Commerce Department, the Fire Underwriters' Laboratories, and other authorities. It follows that with an incombustible floor, and the garage separated from the rest of the building by unpierced partitions and ceilings that will meet the one hour fire test, there is no unreasonable fire hazard. Of course, the outside walls must be fire resistant, too, and so must outside windows and the garage doors, in order to prevent flames from breaking out and spreading fire through windows, or to exterior wood work above. The code does permit, under stringent safeguards, a single swinging, self-closing fire door leading from the garage directly into the house, but we strongly advise that there shall be no opening whatever between the two. It is much safer to enter the garage from the outside."

For the sake of motorists and builders who desire complete directions, Mr. Woolson has prepared below a statement, giving the six rules from the code, together with the directions for carrying them out, as given in the appendix, with a few changes to simplify the wording, which was a little more technical in the original in order to make the rules more practical to enforce. The rules are here arranged by Mr. Woolson "from the ground up" starting with floor construction, walls and partitions, then outside doors and windows, and dealing finally with the permissible case of a door directly between the garage and the dwelling.

Rule 1. Garage floors shall be of concrete or equally fire resistive and impervious material.

For convenience in cleaning and to prevent dangerous accumulations of water, oil or grease, all parts of the floor should drain naturally.

Rule 2. Walls and partitions shall be built to meet the requirements of the standard one hour fire test (mentioned above.)

Many materials are acceptable under this rule, such as brick, hollow tile, concrete block, or gypsum block four inches thick, or reinforced concrete three inches thick. As a minimum requirement, walls may also be constructed of wooden studs spaced 16 inches center to center, with metal lath attached outside and inside. The outer lath is to be plastered and back-plastered with Portland cement stucco, and the inner lath plastered with ¾ inch Portland cement or gypsum plaster. For interior partitions separating the garage from the rest of the dwelling, ¾ inch Portland cement or gypsum plaster on metal lath, on both sides of studs spaced 16 inches apart, is satisfactory. The specifications for metal lath and plaster to be

used are given fully in the Code Committee's Report.

Rule 3. The combined floor and ceiling construction directly above the garage shall be unpierced, and shall have a fire resistance of one hour. The same rule applies to the roof when the garage is attached to the side of the building.

Ceilings or roofs of reinforced concrete, or some other type of incombustible construction that meets the fire test, are best and most reliable. In the case of true built-in garages, a good, inexpensive overhead construction is as follows:

Ordinary 2 inch or thicker floor joists may be used, spaced not more than 16 inches center to center, and properly bridged. The ceiling should be of heavy metal lath weighing not less than 3 pounds per square yard, and Portland cement or gypsum plaster not less than  $\frac{3}{4}$  inch thick. The metal lath is to be attached to the joists by sixpenny nails driven nearly home and the heads turned over against the lath, and is to be bent down 6 inches along the walls on all sides and securely attached to them. The flooring above the ceiling is to be double, of  $\frac{7}{8}$  inch rough and finished floor boards, with a layer of asbestos or other high grade floor felt between.

Where the garage is attached to the side of a dwelling, an equivalent construction for the roof can easily be devised.

Rule 4. When a garage is located beneath a dwelling, all outside doors and windows with their frames and sash shall be of standard fireproof construction, and glazed with wired glass.

Only products approved by competent authorities should be used. A large variety of fire doors and windows have been tested and approved by the Underwriters' Laboratories, and are a standard commodity in the building material market. It is important that such devices should be installed in metal frames, and that the same hardware be used as that with which they were equipped when tested. If not, they may fail during a fire. Fire doors are made in both swinging and sliding types, and many of the former are as artistic as wooden doors. Wired glass glazing is required in all outside windows and doors to prevent flames from a fire in the garage from breaking through and endangering the structure or windows above.

Rule 5. Openings from a dwelling into a garage shall be restricted to a single doorway. This opening shall be protected by a standard swinging, self-closing fire door, with approved fire resistive frame and hardware. No glass shall be permitted in such a door.

A self-closing fire door is one that normally swings shut by a mechanical device. A swinging door is required because it fits closely into its frame, and thereby prevents passage of heat and smoke when attacked by fire. Wired glass is not allowed in this door because it is liable to soften and sag from its fastenings at a temperature of about 1600 degrees Fahrenheit, which is a heat easily produced by burning gasoline or oil. But, as stated above, it is better to have no opening in any of the partitions.

Rule 6. When a doorway connects directly with a cellar or basement on the same or lower level in which there is any heating device or gas fixture, the door sill shall be raised at least one foot above the garage floor level, or the doorway shall lead into a vestibule which connects with the cellar or basement by a second door.

This is to prevent fumes from gasoline which may leak or be spilled upon the floor from reaching a furnace fire or gas light that might be located in any lower portion of the building. It is well known that gasoline vapors are heavier than air, and will accumulate on a floor like water, and flow to any lower level, and if they come in contact with fire of any kind—even a spark—will ignite and flash back to the starting point, and cause an explosion. Hence the high door sill.

**You owe it to yourself to keep in touch with what is going on in the trade, and you can do this only by becoming a subscriber to and regular reader of your trade paper. If you are not a regular reader of the Builder's Guide you should be. The cost is not excessive. A five-spot insures it fifty-two times in the course of a year.**

All advertising pays—even that which is poorly constructed. A bad ad. is better than no ad. at all. It is worth all that it costs in the competitive world of the present day, merely to keep one's name where the possible buyer cannot help seeing it. To be out of sight in the commercial world is to be out of mind.

The man who doesn't advertise because he can't afford to "do it right" will never reach a position of affluence because everything worth while in the world had to have a beginning, and there can be no "get there" for the fellow who fails to make a start.

America stands supreme in the development and use of advertising, and advertising is the seed which by implanting desire produces the fruit of social advancement. Education promotes efficiency and efficiency in turn makes possible higher earning power, higher purchasing power and improved living conditions.

## GAIN IN CONSTRUCTION IN PHILADELPHIA \$3,511,305 THIS YEAR

*Permits for 2263 Operations to Cost \$13,304,060*

An increase of \$3,511,305 for all classes of construction for the two months of this year as compared with the same period of last year is shown in the statement compiled by William Gamble, of the Bureau of Building Inspection, Philadelphia.

So far permits have been issued for 2263 operations, estimated to cost \$13,304,060. Last month permits totaled 1295, on operations estimated to cost \$6,799,960. It was the second best February in the last ten years; 1920 was higher by about \$109,000.

Dwelling construction has again taken first place in cost, losing this position in January for the first time in fifteen months. Permits were issued for 633 houses of the two and three story brick type to cost \$2,690,650. Alteration and addition work reached more than \$1,000,000.

The statement showing construction for which permits were issued in February follows:

	Permits	Operations	Estimated Cost
Dwellings, one story.	1	1	\$1,400
Dwellings, two story.	116	597	2,289,400
Dwellings, 3 sty.....	12	28	367,300
Dwellings, frame ...	6	7	32,550
Tenement houses....	6	15	348,000
Manufactories .....	8	8	129,500
Workshops .....	3	3	4,900
Garages .....	68	69	110,635
Office buildings.....	7	7	514,300
Stores .....	1	1	900

Heaters .....	13	14	14,625
Fire escapes .....	9	9	4,125
Signs .....	28	28	11,935
Totals .....	768	1295	\$6,799,960

Advertising is telling who you are, where you are, and what you have to offer the world in the way of service or commodity.

If nobody knows who you are, or what you have to offer, you do no business, and the world is the loser through giving you absent treatment.

Life is too short for the consumer to employ detectives to ferret out merchants who have the necessities of life to sell.

## Failures Come in Minutes

—it takes time to build success

You have built a successful business,  
a factory, a home—after years of  
effort. You cannot afford to lose  
all through a single misfortune.  
An hour's fire—a flash of lightning—  
an explosion—Your success may turn  
to failure in a moment's time.

No success is safe unless insured.

## As The Editor Sees It

### MUST HALT SPREE OF SHORT HOURS AND HIGH WAGES IN BUILDING INDUSTRY

BY JOHN W. COWPER

*President, Associated General Contractors of America*

The construction industry, rated as the second of importance in the nation, has gone forward in the past year with a tremendous stride, the grand total in volume of work done being the largest of any year in our history. I have not the complete figures, but in building construction alone the total approximates \$4,000,000,000, of which over 40 per cent. was for housing or residential purposes, in part making up the great deficiency in this type of buildings brought about by the war.

With this great activity in the building industry, we have seen costs of construction rise sharply. Assuming 1913 as 100 per cent., building costs rose to over 270 per cent. at the peak in 1920, and, at the end of 1921, they have declined to approximately 160 per cent. which, I believe considering the post-war conditions, was near what we might have expected as normal. But with the increased construction in 1922 prices have again risen, until last December the record shows that they reached 190 per cent.

While labor, both skilled and common, is now receiving as high, if not the highest wages of any time in our national his-

tory, and with the indications pointing to demands for further increases, you will agree, considering the fact that wages are approximately 45 per cent. of the direct cost of building, that we are probably facing a period of higher costs of construction which, if continued, will prove to be a serious check to the healthy progress of the construction industry. We must find a way to stop this trend towards higher prices and, while we believe in sane ideals and ambitions for the so-called laboring class of this country, a continuance of this present spree of short hours and high wages is bound ultimately to result to their detriment.

We are suffering from a shortage of labor to all industries, and particularly in construction. The supply of workmen is not keeping pace with the demand, which in itself is an unsound condition. We need and should have, a revision of our immigration laws so as to permit a sufficient number of immigrants, those to be of a superior quality (and the latter is, more important than the former) based on a selective system, elastic as to the numbers admitted and regulated by the needs of our industries; and this law should by all means include a provision for examination by proper authorities of the prospective immigrants at the port of embarkation, the unit of admission to be by families and not individuals for our own good and, just as important, for the good of the immigrant and of humanity.

### *Develop Apprentice System*

We are dependent in this country, to a large extent, upon foreign countries for our supply of labor and from them it is our duty to make as well as from the younger generation of our citizens, the artisans and skilled mechanics that we require. It is, therefore, necessary that we should advocate the establishment of trade or vocational schools, and, by all means, we must develop to its highest possible degree the apprenticeship system in all lines, not only for the purpose of supplying ourselves, from a selfish standpoint, with the mechanics we require, but to build up our citizenship and help every man to a higher plane in life.

We have suffered in the past few years, particularly in the year 1922, from the disorganization of our transportation systems. I believe our canals and rivers should be developed to their fullest capacity, in conjunction with the railroad systems; and, of course, as feeders and tributaries to both of these, we need the development of our highways.

With regard to the railroads, I have been recently informed that there are pending in Congress, or rather have been introduced, some 130 odd bills affecting transportation, most of which are not likely to be considered because they are of no real importance and have been introduced for some selfish motive; others, I am informed, and a great majority of them, will tend to hamper and retard

our transportation progress. I believe there is no greater service that we can do for our country and ourselves than to aid by a broad liberal policy the development of transportation in every form and to see that our railroads get a fair and square deal, by which they are able to secure the necessary capital for much needed enlargements and improvements.

#### *Railroads Need More Income*

We have had the best transportation system with the lowest rates and with the smallest capitalization per mile of any nation, and if we expect to hold this place the railroads must have the means whereby they can keep pace with the growth of the country. I would like to see the rates of freight reduced; but I believe if they reach such a point as not to produce a fair return on the capital invested, as well as not to provide for additional facilities, that we are only working to our detriment and will ultimately have to pay for such folly.

—*Manufacturers' News.*

#### HOW TO BRING YOUTHS INTO THE TRADES

*The Surest Means of Reaching the Boy and the Appeal That Will Win His Enlistment*

Same story everywhere, east or west. Plenty of unskilled labor in every city, but too few skilled workmen. Closed shop or open shop, organized or unorganized, bonus or straight salary, it makes no difference. The men are not available. If a job is thoroughly unionized, the poor, unfortunate steward goes crazy trying to uphold his end of the bargain. On other work, the contractor gets grayheaded looking for men.

#### *How Wages Compare*

Contrast the building tradesmen's wages with those paid to men in other vocations. A clerk in a dry goods store gets \$2.50 a day and the privilege of buying a few things at almost wholesale. A bricklayer gets from \$12 to \$15 a day. A fair bookkeeper draws down from \$75 to \$100 a month. Plasterers make that much in a week. Yet the employment agencies are full of boys, anxious to be clerks and bookkeepers, none of whom have even considered learning a skilled trade.

In bricklaying, plastering, steam fitting, electrical installation, and in many other classes of skilled labor, there is no chance for the boys to learn all by themselves. Apprentice schools are needed, and many of them. And it is up to the business associations of America, the Associated General Contractors, the Master Builders, the Builders' Exchanges, and the Chambers of Commerce to see that these schools are started in every city and to support them and keep them going after they have started.

It is a big question, too big for any local organization to handle. Once the schools have been organized, whence are the teachers to come? The skilled mechanic will help you get things going, but when he can earn from \$10 to \$30 a day at his trade is he to be blamed if he does not wish to accept a teacher's salary? College presidents, to say nothing of trade school instructors, get less than that. Possibly these posts may be filled by the older men, master workmen who have found that advancing age has made the pace just a little too stiff for them, and who will be glad to settle down in one place and see their work carried on by their pupils.

Then comes the biggest problem of all. Where shall we get the pupils? How shall the present stream of young men which is flowing into the mercantile and professional fields be diverted into another channel? There is but one place in which to reach them, the public school and so far everyone has neglected this unfailing source of supply.

Go to any high school in the United States and look over the list of men who have addressed the boys on the question of their future careers. The banker has told them of the unlimited prospects in his chosen field. The doctor, the lawyer, the engineer, the realtor, the insurance broker, have all appeared before the boys and shown them the bright side of these professions. Has anyone ever talked to them on the tremendous possibilities which lie before the skilled builder? I doubt it.

#### *Visions That Inspire the Boys*

Every boy looks forward to the day when he will own his own business. He takes a position as clerk, not for the immediate cash return, but to learn the game, from the bottom up. In later years, when he is still a clerk, he will be disillusioned, but as a youngster he is full of dreams. He hopes that he will have his own store some day, and be independently wealthy. The boy who is running rod on a survey party is accepting the pitiful salary today so that in future years he may have his own office, with a hundred men working under him. The young bookkeeper is looking forward to the time when his name will appear on the president's door of his own bank. The cub reporter already has his eye on the country newspaper which will be his in a few years.

The boy has no such vision as to the future of the skilled mechanic. Picturing himself as such, he can only see himself in overalls, working for some one else and dependent on casual employment, all his life. The master builder must show the youngster that there are even greater chances for independence in the field of

**THE TRUSCON LABORATORIES —**

## HARDENED CONCRETE FLOORS DO NOT DUST

It is not necessary to put up with dusting cement floors. Over night a soft cement surface from which the cement dust can easily be scratched with the toe of the shoe—can be transformed into a hard, impenetrable floor that will not "sand" or crumble, even under the hardest foot traffic. Phone or write us for information.

construction than there are in medicine, in law, or in banking.

### Retains Idealism in Contracting

And be sure to tell him of the possibilities for service in this field. While he would deny it indignantly, every boy is more or less of an idealist. He enters the doctor's office, not to make money

alone, but for the good he can do to suffering humanity. He studies law with the same ideal in view. That he drops his idealism soon after hanging out his shingle is the greatest indictment of the legal profession.

He need not drop it if he enters the contract field. Who but the builder has brought the East and West together? Who has taken the deserts of the western plains and made them habitable for thousands of settlers? Who has built the cities, and the routes of transportation into them? Who but the builder! Show the youngster this one thing, thoroughly convince him of its truth, and the shortage of skilled mechanics will become a thing of the past.

## PAINTING AND BRONZING RADIATORS

BY A. ASHMAN KELLY

Old radiators should be made clean before giving them a coat of paint or bronze liquid, washing off grease with benzine. After cleaning and dusting off apply any desired coating, even white. Aluminum bronze stirred into a good bronzing liquid until of the consistency of thin paint, may be easily applied with a soft hair brush. One or two coats, as required.

You can make a very good bronzing liquid by taking equal parts of gold size japan and light colored baking varnish and mixing together. To each ounce of this liquid add three ounces of turpentine. Shake in a bottle for use. Bronze powder gives a higher luster by being sifted on a tacky varnish surface.

Apply a coat of baking varnish to the radiator and when it has dried to a "tack," or to that condition that when a finger is touched against it there is a feeling of slight adhesiveness.

Apply the dry bronze powder or aluminum with a dry camel hair brush or a bunch of raw cotton. The brush is best, because it enables you to get easily into small recesses, etc. Place a paper under the radiator to catch the bronze powder as it falls.

For ordinary radiator work a liquid made from good copal varnish thinned down with turpentine, will be found satisfactory; let it dry to a tack, then dust on the bronze. Or if you choose to mix bronze and liquid together, let it be in the proportion of equal parts.

To bronze steam pipes and radiators, using dry gold bronze, paint the pipes and radiators with medium chrome yellow, in oil, thinned with a little turpentine and varnish, and when dry enough rub on the powder. When it is hard-dry apply a coat of thinned copal varnish.

Radiators are sometimes painted white, a rather difficult color, one may say. The heat yellows ordinary white paint, so that a special paint must be used. The first

coats are made with zinc white, thinning with turpentine. The coats are to be made smooth with sandpaper. Or at least as smooth as possible. On this foundation place two coats of the lightest gum copal varnish. Lithopone it is said does well as the base.

Here is a factory formula, which gives a radiator paint that dries without luster and is discolored very little by the heat. White zinc oxide, barytes and powdered soapstone are ground together in japan gold size, turpentine and carbon tetrachloride, in equal parts. Or it can be ground in a celluloid liquid, and there will be no discoloration at all. But the better way is to find a dealer who sells radiator white.

Oil paints will not do, as the oil is more than likely to blister while the color will turn brown and peel off. The best we can do with oil paint is to use zinc white thinned with turpentine to make it dry dead. On top of this the varnish may be applied. But the varnish may soften under the heat, especially the low grade varnishes, which contain rosin. If a baking varnish is used, the purpose being to place the work in an oven, then the varnish coating may be applied much heavier than otherwise it should.

A black radiator varnish is made from the best Syrian asphaltum, or Gilsonite will do as well, heating ten parts over the fire, with two parts of raw linseed oil, until sufficiently fluid. When it is cool thin it down to the consistency of varnish with turpentine.

To do the logs of gas radiators in imitation of wood, they are usually coated with copper bronze or green bronze, and then blended in with colors that will stimulate the natural colors of the barks of certain trees. To make the log look like birch or maple, for instance, or as those bargs sometimes appear, asbestos fiber is attached in various parts of the logs.

The pigments used for this work have to be fire-resistant; these are raw and burnt lumber, Indian red, mineral brown, oxide of chromium green, or copper green. The medium used in mixing the paint is silicate of soda, for there is neither oil nor gum that will stand the degrees of heat generated by these gas-lit metal logs.—*Building Age*.

Richardson & Boynton Company, manufacturers of heating and cooking apparatus, M. F. Gilbert, manager, have moved from 1332 Arch Street to larger quarters at 1308 Arch Street, Philadelphia.

Richardson & Boynton Company have been manufacturers of heating and cooking apparatus since 1837, making a complete line of steam, hot water and vapor boilers, warm air and pipeless heaters, gas combination and coal ranges, hotel ranges and tank and laundry heaters.

## Failures Come in Minutes

—it takes time to build success

You have built a successful business,  
a factory, a home—after years of  
effort. You cannot afford to lose  
all through a single misfortune.  
An hour's fire—a flash of lightning—  
an explosion—Your success may turn  
to failure in a moment's time.

No success is safe unless insured.

## As The Editor Sees It

ONE of the most interesting and pertinent questions which have arisen in the building industry lately has been that concerning apprentices. We have on several occasions printed accounts of experiments in the training of apprentices in various parts of the country. One of the most constant and persistent problems connected with apprenticeship schooling has been the difficulty, attested to from all quarters, of inducing boys to enter the trades. A very interesting account of the success which has attended Cleveland's Bricklayer's Apprentice School is given by Otto Best, Jr., Director of Apprentices in the *American Clay Magazine*.

The Cleveland Bricklayers' Apprentice School, writes Mr. Best, organized Aug. 4, 1922, is conducted under the auspices of the Local Bricklayers' Union No. 5 and the Mason Contractors' Association, a trade association of the Building Trades Employers' Association, in conjunction with the Cleveland Board of Education.

Representatives of these bodies comprise the Apprentice Committee which meets weekly, determining the general policy of the school and handling all matters pertaining to the apprentice system. Complaints from the apprentice and contractors are heard by the Committee, and the contractor as well as the apprentice is subject to its judgments.

The financial requirements of the school are met by provisions of the Smith-

Hughes Law for Vocational Education, whereby the Federal Government appropriates approximately one-fourth, the State Board of Education one-fourth, and the Local Board of Education one-half the teacher's salary. The quarters for the school, the drawing instruments and supplies incidental thereto are furnished by the Local Board. The Cleveland Builders' Supply & Brick Company places gratuitously at the disposal of the school, bricks, sand, and all materials needed for the practical education which the boys are receiving.

There are at present 175 apprentices enrolled, all attending school four hours per week, who are receiving instructions from a teacher having thorough experience as a journeyman, and college training of a technical nature. Sessions of the school are held five days per week in the forenoon; each class is arranged in relation to the time of apprenticeship served. Half the time is spent in plan reading and drawing and the remainder in the practical room. The apprentices must be working at the trade in order to attend the school, and are paid by the contractors for the time spent in school at their established rate.

An apprentice applicant must thoroughly convince the apprentice committee as to his fitness to enter the trade and attend the school. His ability to read and write English is ascertained before his application is given considera-

tion; if his application is approved he is placed on trial with a bonafide mason contractor, that is one who has been in business and has employed an average of five bricklayers per day for two successive years and is reasonably certain of providing an apprentice with continual work. At the end of thirty days of trial he must reappear before the Committee and receive its approval prior to entering into an indenture contract with the contractor.

This contract covers the term of apprenticeship—four years—and binds the apprentice to work for the contractor whenever he has work for him, and obligates the contractor to keep the apprentice employed whenever possible and also to compensate him for school attendance. A mason contractor, of the standing heretofore mentioned, is permitted to indenture a second apprentice after the first has served three years of his apprenticeship, provided he employs an average of ten bricklayers throughout the year. If at any time he employs over ten journeymen he is entitled to use a borrowed apprentice, namely, one who is indentured to another contractor but temporarily unemployed, and by a system of transfer the apprentices are kept employed uninterruptedly.

It has often been said that labor unions are not in sympathy with the training of apprentices and place obstacles in the way of progress of this movement, but the

PRINTS**

experience in Cleveland does not in any respect bear out these statements. The Bricklayers' Union has co-operated in every possible manner and without its participation the venture would have been unsuccessful.

The Director of Apprentices acts in the field for the Apprentice Committee in all cases. If possible he settles cases of difference between the contractor and the apprentice in order to lighten the work of the Committee, and the results are reported to the Apprentice Committee. A daily check is made of the attendance at school, and the cause of their absence is investigated. A record is kept of location of all jobs on which the apprentices are working and all other necessary data.

Contrary to the opinion that good American boys are unwilling to enter trades of this nature the Apprentice Committee has enrolled in the school high school graduates and many other boys of American birth.

To accomplish this it was necessary to increase the attractiveness of the trade. The rate of wages was made sufficient to cope with the wages paid boys of apprenticeship age in factories, shops and offices. A basketball team has recently been formed and under the guidance of an experienced coach is providing recreation. Smokers, dances and other social events tend to sustain their interest.

Rules and regulations governing the apprentices are printed herewith. These rules were formulated by the Committee.

Approved by the Apprentice Committee, January 19th, 1923.

#### *Rules Governing Bricklayer Apprentices*

1. No boy will be given a permit to work as a bricklayer apprentice until his application has been approved by the Apprentice Committee. The mason contractor placing the boy on trial must appear with him before the Apprentice Committee. The Committee reserves the right to require a birth certificate from Applicant. Application blanks may be secured from Bricklayers' Local Union No. 5, 2105 E. 21st Street, or at the office of the Building Trades Employers' Association, Rose Building, Cleveland, Ohio.

2. Every apprentice boy must attend the Bricklayers' School at least four hours per week, or present a written excuse from his employer or physician.

3. Apprentices must return to the contractor to whom they are indentured when they have work and when notified to do so.

4. It is necessary for apprentices to secure a permit from Bricklayers' Local Union No. 5 headquarters to work for a contractor other than the one to whom they are indentured.

5. A report must be made at the school

whenever a change in home address or job location is made.

6. A summons to appear before the Apprentice Committee is compulsory.

7. No transfer or release of an indentured apprentice will be made unless both contractors, parties to the change, the apprentice and the parent or guardian appear jointly before the Apprentice Committee, and after proper hearing, receives the sanction and approval of this body.

8. Contractors are to pay all boys working for them, whether indentured to them or not, for the hours per week spent at school, and the apprentice must return to the job as soon as possible after school in order to receive pay for attendance.

9. The rate to be paid the boys for time spent at school is determined by the official rate per hour for that boy as agreed upon by the Bricklayers' Local Union No. 5, and Mason Contractors, which are as follows:

First six months.....	32 percent
Second six months.....	36 percent
Third six months.....	42 percent
Fourth six months.....	48 percent
Fifth six months.....	52 percent
Sixth six months.....	62 percent
Seventh six months.....	70 percent
Eighth six months.....	80 percent

These rates are based on journeymen bricklayers' rate per hour; any change in said rate will make a proportionate change in these rates, bonuses and yearly increases.

10. Every apprentice boy, at the expiration of his thirty days' trial period must appear before the Apprentice Committee for its approval before he will be allowed to enter into an indenture contract.

11. An apprentice applicant must satisfy the Apprentice Committee as to his ability to read and write the English language intelligently and speak it properly before his application will be considered and must be able to pass any other mental tests required by the Committee.

You owe it to yourself to keep in touch with what is going on in the trade, and you can do this only by becoming a subscriber to and regular reader of your trade paper. If you are not a regular reader of the Builder's Guide you should be. The cost is not excessive. A five-spot insures it fifty-two times in the course of a year.

All advertising pays—even that which is poorly constructed. A bad ad. is better than no ad. at all. It is worth all that it costs in the competitive world of the present day, merely to keep one's name where the possible buyer cannot help seeing it. To be out of sight in the commercial world is to be out of mind.

CONTEMPLATED CONSTRUCTION; ARCHITECTS AND OWNERS; COST LIMIT; LAST DAYS FOR FILING BIDS;  
CHARACTER OF MATERIAL AND EQUIPMENT REQUIRED; ADVANCE INFORMATION IN EVERY PHASE OF NEW CONSTRUCTION

**Building**, Southwest Corner Ninth and Sansom streets, Philadelphia. Architect, John T. Windrim, Commonwealth Building, Philadelphia. Owners, Philadelphia Electric Co., Tenth and Chestnut streets. Brick, steel and concrete. Plans in progress.

**Office Building**, Chestnut street, Sixth to Seventh streets, Philadelphia. Architect, Horace Trumbauer, Land Title Building, Philadelphia. Owner, Cyrus H. K. Curtis, Independence Square, Philadelphia. Brick, steel, concrete, stone, granite, limestone, terra cotta, 11 stories, electric lighting, steam heating, tile and marble work, elevators. Preliminary plans in progress.

**Residence**, location withheld. Architect, Edward A. Roth, Drexel Building. Owner, Louis Rintz, care of architect. Hollow tile and stucco, 2½ stories, 32x33 feet, slate roof, hardwood floors, hot water heating, electric lighting, tile and marble work. Plans completed.

**Store and Apartments**, location withheld. Architect, J. E. Fieldstein, Otis Building, Philadelphia. Owner, Jacob Gorchov, 4116 Girard avenue, Philadelphia. Brick, 4 stories, 115x63 feet, slag roof, hardwood floors, artificial stone, vapor heating, electric lighting, plumbing, tile work, fire tower, Spanish tile roof, will contain 12 apartments. Plans in progress.

**Apartment House**, Germantown, Philadelphia. Architect, Richard A. Kerns, Jr., 10 South Eighteenth street, Philadelphia. Owner, name withheld. Brick, 4 stories. Preliminary plans in progress.

**Residence**, Graver's lane and Stenton avenue, Chestnut Hill. Architect, William F. B. Koelle, Otis Building, Philadelphia. Owner, Murray Earle, care of architect. Stone, 2½ stories, slate roof, hardwood floors, hot water heating, electric lighting, tile work. Plans in progress.

**Residences (2) (alts. and add.)**, 1925-27 Panama street. Architect, William F. B. Koelle, Otis Building, Philadelphia. Owner, Mrs. Charles T. Cresswell, 2122 Locust street. Brick, steel and stucco, 3 stories and basement, 30x32 feet, slag roof, oak and pine floors, electric lighting, metal lath, bond, iron work (heating reserved). Revised plans in progress.

**Store and Office Building**, Northwest Corner Twenty-first and Walnut streets. Archi-

tect, LeRoy B. Rothschild, 215 South Broad street, Philadelphia. Owners, Fried & Fishman, 605 South Tenth street, Philadelphia. Brick, steel, concrete, stone and terra cotta. Preliminary plans in progress.

**Store (alts.)**, 124 South Thirteenth street, Philadelphia. Architect, Sol Kaplan, 10 South Eighteenth street, Philadelphia. Owner, name withheld. Brick, 1 story and basement, 24x100 feet, rubbertile floors, steam heat, electric work, plumbing, tile and marble work, plate glass, ornamental plastering, structural steel. Plans completed. Will be ready for bids in a few days.

**Manufacturing Building and Power Plant**, Fifth and Bristol streets. Architects, William Steele & Sons Co., 219 North Broad street, Philadelphia. Owners, Brandle & Smith, Eighth and Dauphin streets, Philadelphia. Working plans in progress. Too early for details.

**Residences (alts.)**, Chestnut Hill, Philadelphia. Architect, William Woodburn Potter, Real Estate Trust Building, Philadelphia. Owner, John T. Kommer, 6335 Stenton avenue, Philadelphia. Plans in progress. Too early for details.

**Warehouse and Garage**, F and Atlantic streets, Philadelphia, \$105,000. Engineer, M. Ward Easby, 1814 Chestnut street, Philadelphia. Owners, Pennsylvania Door & Sash Co., Twenty-fifth and Callowhill streets. Brick, 1 and 2 stories, 315x193½ feet and 41x81 feet, garage, 1 story, 81x40 feet, slag roof, pine and cement floors, steel sash, steam heat, electric lighting, skylights, ventilators. Engineers will build.

**Garages (5)**, Frankford, Philadelphia. Architect, Samuel D. Milner, 1117 Foulkrod street, Philadelphia. Owner, name withheld. Brick, 1 story, 9x18 feet, slag roof, cement floors, electric lighting. Architect is taking sub-bids.

**Office Building**, 1611 Walnut street, Philadelphia. Architect, Charles E. Oelschlager, 1615 Locust street, Philadelphia. Owner, H. C. Hollinger, The Longacre, Philadelphia. Brick, concrete, steel and limestone, 4 stories, 117x22 feet, slag roof, cement floors, steam heating, electric light, metal lath, tile work. Owner is taking sub-bids.

**Stores and Apartments (6)**, Mt. Pleasant and Germantown avenues. Architect, J. Ethan Fieldstein, Otis Building, Philadelphia.

Owner, Joseph S. Silver, 5160 North Camac street, Philadelphia. Electric work, general alterations, hardwood floors, tile work, metal bulks, metal ceilings, steel work. Owner is ready for sub-bids.

**Residences (10)**, Rittenhouse between Chew and Boyer streets, \$18,000 each. Architect, private plans. Owner, James N. Mitchell, 4 South Farragut Terrace, Philadelphia. Brick and stone, 2½ stories, 30x31 feet, tile roof, hardwood floors, hot water heating, electric lighting, tile work. Owner will take sub-bids in three weeks.

**Residences (52)**, Stafford street, between Boyer and Sprague streets, \$7,200 each. Architect, private plans. Owner, James N. Mitchell, 4 South Farragut Terrace, Philadelphia. Brick, 2 stories, 24x24½ feet, garage in basement, tile and slag roof, hardwood floors, hot water heating, electric lighting, tile work, metal lath, cement work. Owner is taking sub-bids.

**Residence**, Phil Ellena and Greene streets, Philadelphia. Architects, Magaziner, Eberhard and Harris, 603 Chestnut street. Owner, A. L. Fellman, 2356 North Front street, Philadelphia. Brick, 2½ stories, 43x35 feet, slate roof, oak and pine floors, metal lath, tile work, iron work (heating and electric work reserved). Architects taking bids due March 23rd.

**Bungalow**, Phil Ellena, West of Greene street, Germantown. Architects, Magaziner, Eberhard & Harris, 603 Chestnut street. Owner, William S. Weil, 4747 North Gratz street, Philadelphia. Brick, 1½ stories, 67x42 feet, slate roof, oak and pine floors, metal lath, tile work, iron work (heating and lighting reserved). Architects taking bids due March 23rd.

**Residence**, Gate street, Roxboro, Pa. Architect, private plans. Owner, C. W. Hornby, 6134 Ridge avenue, Philadelphia. Stone, 2½ stories, 47x22 feet, asbestos shingle roof, oak and pine floors, hot water heat, electric light, tile work, iron work. Owner taking bids due March 24th.

**Residence (alts. and add.)**, 6300 Overbrook avenue. Architects, Thomas, Martin & Kirkpatrick, Otis Building. Owner, Dr. William Hewson, on premises. Brick and stucco, 1 story, 30x12 feet, asbestos shingle roof, oak and pine floors, hot water heat, electric light-

**THE TRUSCON LABORATORIES**

## HARDENED CONCRETE FLOORS DO NOT DUST

It is not necessary to put up with dusting cement floors. Over night a soft cement surface from which the cement dust can easily be scratched with the toe of the shoe—can be transformed into a hard, impenetrable floor that will not "sand" or crumble, even under the hardest foot traffic. Phone or write us for information.

## Proposals

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., March 15, 1923. Sealed Proposals will be opened in this office at 3 P. M., April 16, 1923, for an ice making and refrigerating plant at the U. S. Veterans' Hospital, Chelsea, N. Y. Specifications may be obtained at this office in the discretion of the Supervising Architect. Proposals will be considered only from individuals, firms or corporations possessing satisfactory financial and technical ability, equipment and organization to insure speedy completion of the contract, and who have established a record for expedition on contracts of similar character and magnitude. The fact that any concern obtaining a set of the plans and specifications from any source whatever and submits a bid shall not constitute a waiver of the foregoing stipulations. Jas. A. Wetmore, Acting Supervising Architect.

## Failures Come in Minutes

—it takes time to build success

You have built a successful business, a factory, a home—after years of effort. You cannot afford to lose all through a single misfortune. An hour's fire—a flash of lightning—an explosion—Your success may turn to failure in a moment's time.

No success is safe unless insured.

## As The Editor Sees It

### GOOD PRACTICE IN PLASTERING\*

*Desirable Standards Suggested by the  
Building Code Committee of the  
United States Department  
of Commerce*

When plaster is to be applied directly to masonry surfaces, these should be rough in texture but not uneven; free from dust, laitance or other loose material which will prevent a good bond between plaster and wall; and particularly from grease, which will cause discolorations. The wall surface should be wet enough so that it does not withdraw water from the plaster, but not so wet as to fill the surface pores and prevent good bond or interfere with hardening. Care in this respect is not so important with lime plasters as with gypsum because lime holds water against suction better than gypsum and because water is not required for hardening lime while it is for gypsum.

Masonry walls may be furred either with clay or gypsum furring tile, which furnishes a plastering surface, or by attaching wood or metal lath properly furred to the masonry. Where walls are likely to be damp, hollow tile furring will be more satisfactory than gypsum.

\*From the Preliminary Report of the Building Code Committee of the United States Department of Commerce.

To prevent undue lateral expansion and contraction of wood lath, which shears and loosens the plaster keys, such lath should not be over  $1\frac{1}{2}$  by  $\frac{3}{8}$  in. in section and key spaces should not be less than  $\frac{3}{8}$  in. for lime plaster or  $\frac{1}{4}$  in. for gypsum plaster. Wood lath should be thoroughly wet when plaster is applied. Lath should be attached to at least three supports, and good practice requires broken joints at least every eighth lath.

Expanded metal lath weighing 2.2 lbs. per sq. yd., or No. 20 wire cloth,  $2\frac{1}{2}$  meshes to the inch, are sufficiently rigid for plaster supports in small dwellings where timbers are spaced not more than 16 in. for walls and 12 in. for ceilings. Longer spans demand heavier lath or special stiffeners. Ends of sheets should be joined over supports, and horizontal edges lapped and laced securely with wire. Continuous sheets bent around corners tend to prevent corner cracks in the plaster. It is recommended that all metal lath be either galvanized or painted.

Gypsum plaster boards are essentially squares of gypsum plaster, coated on both sides with paper, or instead of paper, wood fiber or other vegetable fiber is mixed with the material of which the boards are made. They are usually about 32x36 in. and supplied in thicknesses from  $\frac{1}{4}$  in. up. For small dwellings, where the distance between supports is as given above,  $\frac{1}{4}$  in. board may be used. For greater spans a thicker board is required for

rigidity, but in no case should the board be so thick that its face is not amply covered by the plaster in obtaining the required thickness. Each board should be fastened to at least three supports and all joints perpendicular to supports should be broken. The surface of the board is finished so that plaster adheres readily and should not be wetted when plaster is applied.

While the use of plasterboard is understood at times to result in cracks, the material does not differ greatly in this respect from wood lath and plaster; is much superior to the latter in point of fire resistance; and least equivalent in strength and rigidity.

### Plaster Materials

In a few localities, plaster can be obtained mixed ready to spread on the wall. This practice permits more careful selection of the ingredients, better proportioning, and more thorough mixing than where the plaster is prepared on the job. The use of such plasters is therefore recommended wherever they can be obtained of good quality and at reasonable cost.

For preparation of plaster on the job lime and gypsum average about the same in cost, each having the advantage in some markets. Lime will carry about twice as much sand as gypsum, and this is economical. On the other hand, the setting time of gypsum plasters can be regulated at will, which permits planning

PRINTS**

the work with resultant saving. Gypsum plaster has greater inherent strength and much better fire resistive qualities than lime plaster. Lime plaster can be brought to equal strength by tempering with portland or Keene's cement, and is much more resistant to moisture than gypsum plaster. The latter should not be used in combination with portland cement nor in contact with portland cement concrete. Selection of plasters should be made with reference to local practice, better work usually resulting with familiar materials.

A type of gypsum, manufactured by a new process, has the same plasticity and sand carrying capacity as lime, while it retains the quick set and strength of gypsum.

Gypsum wallboard represents the nearest present approach to manufacture of completed plaster at the factory, ready to be erected in place. It is supplied in sheets 4 ft. wide; in lengths to fit the height of a room; usually  $\frac{3}{8}$  in. thick; and coated on both sides with paper. It should be erected with no side joints between boards and the end joints always over support. If desired it may be painted or otherwise decorated after erection. The joints between boards are usually covered with wood or paper strips. Wall board in place is cheaper than plaster; also inferior as a heat or sound insulator and in fire resistive qualities. Wallboard possesses the essential characteristics of rigidity, strength and finished surface common to plaster, and in addition avoids some of the dangers, such as poor sand, and unskilled mixing and application, which endanger the durability of plaster prepared from materials on the job.

#### *Mixing and Application of Plaster*

Proportions of sand and lime or gypsum should be such as to use as much sand as possible without reducing strength below a necessary minimum. The best proportions will vary with each grade or make of materials. Common practice requires the scratch coat to be 1 part by weight of hydrate lime to  $3\frac{1}{2}$  parts of sand, or 1 part of gypsum to 2 parts sand. Corresponding figures for the brown coat are 1 to 4 for lime and 1 to 3 for gypsum. For best results there proportions must often be varied but the old custom of adding sand by guess until it "feels right to the plasterer" cannot be too strongly condemned.

The finish coat requires a very plastic lime prepared as putty and aged for about two weeks, after which it is mixed with about half its volume of gypsum, applied to the wall and troweled to a smooth hard finish. Much skill and care is needed for success, though the new plastic gypsum noted above, can be used without addition of lime, thereby facilitating the work.

#### *Number and Thickness of Plaster Coats Necessary*

It is entirely possible to produce a pleasing surface on the brown coat, so that no finish coat is required. The exposed aggregate method of making colored concrete is equally applicable to plaster, and requires merely a little care in the selection of the said. If the brown coat is made of gypsum wood-fibred plaster, the wood fibres may be dyed, and exposed by washing the plaster after it has set, to give pleasing effects as to both color and texture. The ordinary brown coat may be rubbed down to a sand float finish, which is satisfactory for some purposes, and may be improved by painting.

If the finish coat is omitted and a strong (rich) gypsum plaster used the customary  $\frac{7}{8}$ -in. thickness for plaster can safely be reduced to  $\frac{5}{8}$ -in. or even less. This would mean considerable economy with slight sacrifice of desirable qualities. Where rigidity is not important two coats are sufficient whether scratch and brown or scratch and finish. Masonry walls and ceilings are plastered almost entirely for decorative reasons and one coat, properly selected, is entirely sufficient if the surface is not too uneven. Under most unfavorable conditions two coats, totaling  $\frac{5}{8}$  in. thickness are all that should be required.

#### *Furring*

In regions subject to low temperature, high winds heavy rains or extreme humidity of considerable duration, furring of solid masonry walls is practically a necessity to avoid unwholesome living conditions caused by damp walls, also the danger of ruining wall decorations.

In arid localities where low temperatures are infrequent, furring may be omitted without serious results, but should be used wherever economy in construction cost is a secondary consideration.

Waterproofing paints or compounds applied to the interior of solid masonry walls help considerably to prevent moisture penetration but have little effect in preventing condensation and make it difficult to bond plaster directly to such treated walls.

Furring is somewhat less necessary on masonry walls of hollow units, since the enclosed air cells help to check transmission of heat and moisture. However, mortar joints running through the wall are found to conduct moisture readily when poorly or incompletely made, and walls having such continuous joints require furring.

Furring a masonry wall lessens its heat conductivity from 15 to 20 percent, thus saving considerable fuel, which saving, of course, continues throughout the life of

Shipped as dry Crystals, for making Concrete Floors Hard as Iron  
**THE TRUSCON LABORATORIES**

## HARDENED CONCRETE FLOORS DO NOT DUST

It is not necessary to put up with dusting cement floors. Over night a soft cement surface from which the cement dust can easily be scratched with the toe of the shoe—can be transformed into a hard, impenetrable floor that will not "sand" or crumble, even under the hardest foot traffic. Phone or write us for information.

**Theatre, Arcade and Store Building**, Kentucky avenue and Boardwalk, Atlantic City, N. J. Architects, Hoffman Henon, Inc., Finance Building, Philadelphia. Owners, Stanley Co. of America, 1218 Market street, and Guilford, Inc., 1038 Market street, Philadelphia. Brick, steel, concrete, stone, terra cotta, 170x190 feet. Plans about completed. Architects will be ready for bids in about ten days.

**Grove Street Grade School**, Haddonfield, N. J. Architects, Lackey & Hettle, 5 Hudson avenue, Camden, N. J. Owners, Haddonfield Board of Education, care of Mrs. Wilson, secretary, Haddonfield, N. J. Brick, 2 stories, 8 rooms (heating, plumbing and electric work reserved), slag roof, maple and concrete floors, metal lath, rolled steel sash, tin fire doors, safety treads, roof ventilators, iron stairs, ornamental iron work. Plans in progress. Architect will be ready for bids in ten days.

**Residence**, Audubon, N. J. Architects, Lackey & Hettle, 5 Hudson avenue, Camden, N. J. Owners, American Legion Home, Casper Peiz, Audubon, N. J. Cinder block, 1 story and basement, 40x80 feet, asphalt shingle roof, pine floors, steam heat, electric light, plumbing. Architect ready for bids.

**Residence**, Moorestown, N. J. Architect, Arnold Moses, Temple Building, Camden, N. J. Owner, Mrs. S. B. Lippincott, Moorestown, N. J. Frame, 2½ stories, 36x28 feet, shingle roof, hardwood floors, hot air heat, electric light, tile work. Owner ready for bids.

**Store, Apartment and Garages**, (3), Camden, N. J. Architects, Lackey & Hettle, 5 Hudson avenue, Camden, N. J. Owner, Michael Matthews, Eighth and Florence streets, Camden. Cinder block, stucco, 1 story, 25x60 feet, 25x30 feet, slag roof, pine and concrete floors, hot water heat, electric light. Owner taking sub-bids.

**Bungalow**, Forty-first and Maple avenue, Merchantville, N. J. Architects, Lackey & Hettle, 5 Hudson avenue, Camden, N. J. Owner, M. J. Jubanyik, 40 North Third street, Camden, N. J. Cinder block and stucco, 1 story, 40x20 feet, asphalt shingle roof, pine floors, steam heat, electric light. Owner ready for sub-bids.

**Bank**, Gloucester, N. J. Architects, Lackey & Hettle, 5 Hudson avenue, Camden, N. J. Owners, Gloucester City Trust Co., Dr. Headley, president, Atlantic and Monmouth avenues, Gloucester, N. J. Brick, limestone, 1

story, 42x70 feet, slag roof, concrete floors, vapor heat, electric light, cinder block, metal lath, tile, marble and terrazzo work. Will take bids in three weeks.

**Bungalow**, Edgewater Park, N. J. Architect, J. Fletcher Street, 1120 Locust street, Philadelphia. Owner, Henry Blair, Edgewater Park, N. J. Architect taking bids due April 3rd.

**Store and Apartment, Warehouse and Boiler House**, Paulsboro, N. J. Architects, Lackey & Hettle, 5 Hudson Ave., Camden, N. J. Owner, Edward McIntyre, Paulsboro, N. J. Brick, steel and castone, 2 stories, 54x60 feet, 2 stories, 40x76 feet, and 1 story, 10x30 feet, slag roof, pine and cement floors, steam heat, electric light, metal lath, rolled steel sash, iron work. Lowest bid submitted by Wills Bill Co., 1706 Sansom street, Philadelphia.

**School**, Verna, N. J. Architects, Sanders & Young, 39 South Seventeenth street, Philadelphia. Owners, West Deptford Township School Board, Lewis K. Wilkens, Thorofare, N. J. Lowest bidders: George W. Shaner & Son, Palmyra, N. J., \$25,307. Plumbing, J. P. Muldoon, Audubon, N. J., \$525. Electric, Enterprise Elect. Co., 239 South Tenth street, Philadelphia, \$650. Heating and ventilating, J. P. Muldoon, Audubon, N. J., \$4,350.

**School**, Oaklyn, N. J. Architect, Clyde S. Adams, 2038 Spruce street, Philadelphia. Owners, School Board, Oaklyn, N. J. Lowest bidders: George W. Shaner & Son, Palmyra, N. J., \$48,525; Friel McLeister Co., Inc., 1615 Spruce street, Philadelphia, \$48,889. Plumbing, J. H. Hutchinson, 1020 Callowhill street, Philadelphia, \$1,908. Electric, Reliance Elect. Co., Oaklyn, N. J. Heating, J. P. Muldoon, Audubon, N. J., \$6,900.

## New Jersey Contracts Awarded

**High School**, Ocean City, N. J. Architect, Vivian B. Smith, Guarantee Trust Building, Atlantic City. Owners, Ocean City School Board, Ocean City, N. J. Brick, steel, fireproof, 3 stories, 194x191 feet (heating, plumbing and electric work reserved), slag roof, hardwood floors, metal lath, hollow tile, tile and marble work, roof, ventilators, waterproofing, dampproofing, terra cotta, ornamental iron work. Contract awarded to J. S. Rogers Co., Drexel Building, Philadelphia.

**Parkway School and Auditorium**, Ewing Township, Mercer County, N. J. Architect, R. A. Schumann, 202 West State street, Trenton, N. J. Owners, Ewing Township School Board, C. G. Latham, secretary, care of architect. Brick, 1 story and basement, 115x127 feet, slag roof, pine floors, hardwood floors (heating, plumbing and electric work reserved), metal lath, safety treads, roof ventilators, rolled steel skylights, waterproofing and dampproofing, bond. Contract awarded to Harrison & Fisher, Trenton, N. J.

**Residence and Garage**, Llewellyn Park, West Orange, N. J. Architects, Mellor, Meigs & Howe, 209 South Juniper street, Philadelphia. Owner, Robert W. Tilney, West Orange, N. J. Brick, 2½ stories, 50x98 feet, and 1 story, 22x22 feet, shingle roof, hardwood floors, hot water heating, electric lighting, tile work. Contract awarded to John W. Barnes, 10 East Forty-third street, New York City, \$55,500.

## Delaware Construction News

**Elks' Home**, Wilmington, Del. Architect, J. D. Thompson, Ford Building, Wilmington, Del. Owners, Wilmington Lodge, B. P. O. E.,

care of architect. Brick, 6 stories. Too early for details.

**Hospital**, Clayton street, between Seventh and Eighth streets, Wilmington, Del. Architect, Frank R. Watson, 1211 Walnut street, Philadelphia. Owners, Srs. of the Third Order of St. Francis, Glen Riddle, Pa. Reinforced concrete, steel, brick and cut stone, 3 stories, ground floor, 175x41 feet, wing 35x45 feet, tile roof, cement, composition and oak floors, metal lath, elevators, iron work, bond, hollow metal doors, rolled steel sash and skylights, tile and marble work, steam heating, electric lighting. Contract awarded to J. E. Healy & Son, 707 Tatnall street, Wilmington, Del.

**Residences (4)**, Twenty-third and Lamotte streets, Wilmington, Del. Architect, John A. McKibbin, Industrial Trust Building, Wilmington. Owners, City Real Estate Co., care of Mr. Lynch, 612 West Ninth street, Wilmington, Del. Brick, 2½ stories, 22x30 feet, slag, tin and slate roofing, pine floors, hot water heating, electric lighting. Contract awarded to P. W. Newell & Sons, 1401 Maple street, Wilmington, Del.

**Residence**, Bellevue, Delaware. Architect, E. C. May, Dupont Building, Wilmington, Del. Owner, George H. Markell, 830 Jackson street, Wilmington. Brick, 3 stories, 45x30 feet, slate roof, hardwood floors (heating, plumbing and electric work reserved), tile and marble work. Contract awarded to Edward Johnson, Wilmington, Del.

## Miscellaneous Construction News

**Chemical Laboratory**, Morgantown, W. Va. Architects, Paul A. Davis & Dunlap, 1713 Sansom street, Philadelphia. Owners, West Virginia University, care of James S. Lakin, president, State Board of Commissioners, Charleston, W. Va. Stone and brick, concrete and steel. Plans completed. Owners ready for bids. Plans may be obtained from owners.

**Residence**, Winston-Salem, N. C. Architect, Charles Barton Keen, Bailey Building, Philadelphia. Owner, Alexander S. Hanos, Winston-Salem, N. C. Frame and weather board, 2½ stories, 36x80 feet, tile roof (alternate for shingle), oak, cork tile and pine floors, vapor heating, electric lighting, tile work, marble work. Architect taking bids due March 31st.

**Garage**, Elkton, Md. Architect, J. Fletcher Street, 1120 Locust street, Philadelphia. Owners, Messers, Giles & Bouchelle, Elkton, Md. Concrete block, 1 story, 50x125 feet, slag roof, cement floors, steam heat, electric lighting, metal sash. Architect taking bids.

**Peabody Museum**, New Haven, Conn. Architects, Day & Klauder, Franklin Bank Building, Philadelphia. Owners, Yale University, New Haven, Conn. Stone and brick. Architects taking bids due April 16th.

**Warehouse and Office Building**, Southeast Corner Fourth and T streets, Washington, D. C. Architects, The Ballinger Co., Twelfth and Chestnut streets, Philadelphia. Owners, The Sanitary Grocery Co., Washington, D. C. Reinforced concrete, brick and steel, 4 stories and basement, 150x250 feet, slag roof, concrete floors, waterproofing, iron work, bond, kalamein doors, rolled steel sash (heating, electric work, elevators and plumbing reserved). Architects taking bids due April 4th at noon.

Don't be discouraged if you make an occasional mistake; if men didn't there wouldn't need to be any claw on a hammer.

## Miscellaneous

### Contracts Awarded

**High School, Roanoke, Va.** Architect, H. C. Richards, 608 Chestnut street, Philadelphia. Owners, School Board of Roanoke, J. A. Page, Clerk, Roanoke. Brick, concrete, steel, cut stone and granite, 2 stories and basement, 151x294 feet, composition roof, concrete and maple floors, safety treads, roof ventilators, metal weather strips, waterproofing and dampproofing, iron work, iron stairs, bond, rolled steel sash and skylights, tile, marble and terrazzo work, metal lath (heating, etc., separate bids). Contracts awarded to E. M. Herringdon & Co., Roanoke, Va., \$476,011. Heating (warm air), American Heating & Ventilating Co., Richmond, Va., \$40,854. Plumbing, Simpson & Basham, Roanoke, Va., \$28,300. Electric, Engleby Elect. Co., Roanoke, Va., \$14,700.

**Athletic Field Club, New Haven, Conn.** Architects, Day & Klauder, Franklin Bank Building, Philadelphia. Owners, Yale University, New Haven, Conn. Brick, reinforced concrete, steel, bluestone and granite, 3½ stories, 170x70 feet, slate roof, cement and pine floors, hollow tile, metal lath, tile and marble work, waterproofing, iron work and stairs, bond, steel and kalamein doors, rolled steel skylights. Contract awarded to Sperry & Treat Co., New Haven, Conn.

### Proposals

**TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., March 19, 1923.**—Sealed proposals will be opened in this office at 3 P. M., April 4, 1923, for interior painting, finishing, etc., of buildings and structures, as listed, for the United States Veterans' Hospital, at Perryville, Md. Specifications may be obtained at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

### POSITION WANTED

Clerk, experienced on construction work either on job or in office. Can handle purchasing, books, correspondence and general office work. Thoroughly familiar with all lines in building game. Address A. A., "Builders' Guide," Perry Bldg., Philadelphia.

(Continued from page 196)

the structure and may repay many times over the increased cost of furring.

Since hollow walls are good heat insulators, it has been found in many places that furring may be omitted and plaster applied directly to the interiors of walls which are built with a continuous hollow space or in which the mortar joints extend but part way through the wall.

In concrete house construction provision for insulation of exterior walls is recommended. A dead air space within the wall proper or formed by furring and plastering has been found effective and this requirement seems to be favored by those recommending the use of concrete external walls.

In applying plaster to furring lath, it is important that the keys shall not pro-

ject through so as to touch the wall, nor be allowed to drop off and form a solid mass between plaster and wall. In either case moisture from the wall is liable to be transmitted through the plaster producing troublesome results such as staining the wall, and ruining the lath—wood lath by dry rot and metal lath by corrosion. It is claimed that excellent results in furring 8 in. brick walls are obtained by attaching a layer of tarred paper to the back of the furring strips, or by using lath in which such paper forms an integral part.

Incombustible furring is excellent since it entirely prevents a fire creeping along a wall from one story to another behind the plaster. Hollow tile or gypsum furring blocks are much used and are quite satisfactory. They have grooves in the back face which furnish air spaces between the wall and the plaster. There are also several forms of metal furring to which metal lath is attached and which serve the same purpose. Where walls are likely to be damp, hollow tile furring will be more satisfactory than gypsum.

### WHY CONTRACTORS ENCROACH ON THE ARCHITECT'S FIELD

*Abstract of an Address by J. C. Edwards, President of the Southern California Chapter, A. G. C., Los Angeles, Calif.*

I intend to be very frank and name a few of the real reasons why contractors, who feel themselves capable, encroach on the architect's field. . . .

There has been a decided change in the personnel of the general contractors in the building industry during the past 20 years or even during the past 10 years. Improved methods are definitely eliminating the rule-of-thumb contractor, and the contractor of today feels that he is entitled to and should receive the same recognition as the architect or engineer.

Your profession has permitted commercialism to gain such a foothold that, in many cases, completeness of plans and specifications is sacrificed in order that more of the fee may be retained as a net profit. Where this is done controversies arise, extras are claimed, and both owner and contractor are dissatisfied.

The thing that makes government red tape on construction work bearable is the wonderful completeness of the plans and specifications and the exactitude with which one can determine the volume and kind of work to be done.

The custom of calling for such a multitude of alternate bids is not looked on with favor by the contractor. He feels that it is part of your service to the owner to predetermine the volume of

work to be done and the kind of materials to be used.

Contractors feel that in many cases bids are requested and their time consumed in preparing estimates on work, when the architect knows there is not even a remote possibility of the work going ahead; and it is a very common occurrence for a contractor to submit a proposal to an architect and for that proposal to be held for a month or more without being accepted or rejected, the contractor being unable to obtain any information regarding same. This is obviously unjust and should not be continued if it is your intention to recognize the service rendered to the industry by the contractor.

Draw your contracts so as to show fairness to both parties concerned, the owner and the contractor. Insert an arbitration clause in them so that honest differences may be settled out of court. This may be working a hardship on our friends, the attorneys but nevertheless it is a most satisfactory way of adjusting disputes.

In your contracts and specifications avoid the shifting of responsibility. I have seen contracts based on specifications which provided that the contractor was to assume all responsibility for plans and specifications complying with city ordinances.

Conditions such as I have mentioned have a tendency to create a desire in the contractor to undertake himself the architectural service necessary to a construction project and it is with increasing frequency that you hear of it from the larger contracting firms.

Please do not think for one moment that I fail to appreciate the fact that in many instances contractors have, by their unsatisfactory methods, driven the architects to seek a method whereby they might be eliminated.

It is necessary, however, that we tell you our troubles and you tell us yours if anything is to be done to check this tendency to encroach on one another's field.

There never was a truer saying than this: "A man who is his own attorney has a fool for a client". The principle is applicable to construction. We each have a distinctive service to perform and I doubt very much the ability of either of us to successfully assume the other's position.

Our association will heartily endorse any effort on your part to eliminate the undesirable man in the business, because by so doing we both will be rendering a really honest service to the public. Unless such a service is rendered there is no justification for the existence of yours, ours, or any similar organization.—*National Builder.*

## As The Editor Sees It

By losing money yourself, you will never contribute to the benefit of industry in general. An unwise bid, even on the part of the most responsible contractor, hurts the construction industry. "Do not bid too low" is just exactly as beneficial a slogan, so far as the industry and the public are concerned, as is "Do not raise costs by striving for great selfish profits."

When the subcontractor has put in a season and, after the manner of his own figuring, sees a very skimpy margin of gain, there is something wrong which should be righted. And be it inserted right here that oftentimes when the subcontractor does see a skimpy margin, the services of a cost accountant would acquaint him with the fact that even the skimpy margin is not there. It has been eaten by overhead and other factors he forgot to figure in.

There is much said about relations with subcontractors. There need be nothing said if men recognize the golden rule and bid with understanding. Price cutting on the part of material men, ill advised bidding on the part of contractors, gouging the subcontractor are dead weights on progress.

The aim of each factor of the industry should be to make a decent profit, and to do this by proper charging and not by skinning some unfortunate to recoup a loss which should be borne by the loser be-

cause he did not do that which would forestall the loss.

No one should be in business for his health, neither should anyone be in business parasitically, that is to make money off the mistakes of others. See to it that you can make a legitimate profit. Then take upon yourself the much bigger and harder task of making all others in the construction industry see the same thing. The vast amount of building which is being done should in general render profits to the materialmen all along the line, to the subcontractor, and to the general contractor; but this will never come about until each of the above recognizes the universal co-operation which should exist. How shall this co-operation be secured? The answer lies with you and with each of the associations to which you belong.

The low bid on a residence is \$17,000. The next higher bid is \$21,000; three other bids range up to \$24,000. The low man cannot give bond but the owner awards him the contract notwithstanding. The one-sided Mechanic's Lien law, as the owner knows, gives no standing to claims of dealer and subcontractor against the building, unless written notice has been served before delivery of material or service that lien will be filed if the claims are unpaid, and the owner has not refused acceptance of delivery under that condition. Is it conceivable that this owner should take a bid from a party

who could not give bond, if the owner knew that HE would be liable for payment of all bills for material and service on the building in the event that the contractor did not pay them?

The further history of the project, of which I have been speaking, is that the contractor fell down on the job and the owner had to have the house completed under the architect's supervision. The contractor's work had been so poorly done that the completed house is considered in building circles a botch, and the owner knows it. Dealers and subcontractors who had unpaid bills against the contractor on account of this house had to compromise at 50 cents on the dollar, although the owner is wealthy. The lure of business had led them to take the same chance that the owner took, and they, too, became losers.

Here are the fruits of a one-sided law: 1. A \$4,000 premium on incompetence and irresponsibility took the job away from a competent and a responsible contractor. 2. The owner has a blotched house. 3. The dealers and subcontractors charge 50 per cent. of their claims off to profit and loss. 4. Other owners have to carry this loss and other losses of the same character because of the larger margin of profit the losers must charge to absorb these losses. Should not all responsible building interests co-operate to end such wasteful, inequitable, senseless conditions of doing business and so

bring nearer equitable uniformity in lien laws?"—From an address delivered by Virgil Dibble, Columbia, South Carolina, before the National Association of Builders' Exchanges at Des Moines, Iowa, February 13, 1923.

#### WHAT FIRE COSTS PENNSYLVANIA

*State Suffered Nearly 26½ Million Dollars Loss in 1921, According to National Board of Fire Underwriters—Three-Fourths of This Waste Clearly Preventable*

Can it be that residents of Pennsylvania really are not much concerned about the persistently mounting cost of living? That, of course, is highly unlikely; yet it appears that, from figures compiled by the Actuarial Bureau of the National Board of Fire Underwriters \$26,443,596 worth of property was burned in this State during 1921; and this is a waste which definitely and substantially affects living expenses.

To this total fire loss—which places Pennsylvania second among the forty-eight states—every man, woman and child contributed an average of \$3.03, although few probably realized it. In 1918, the destruction amounted to \$19,198,923, which indicates the startling increase in three years of \$7,244,673. It is customary, also, to add to the total 25% for unreported and uninsured losses.

Analysis of the elaborate tabulation published by the National Board establishes the fact that, of the twenty so-called originating causes, "Matches-Smoking" was chiefly responsible for this monstrous wastage. Its share of the damage inflicted was \$1,817,931. Following this cause came "Spontaneous Combustion," with \$1,182,318, and "Stoves, Furnaces, Boilers and Their Pipes," to which was attributed \$1,013,265 loss. Fire prevention engineers consider that fully 75% of the country's permanent fire destruction always is clearly preventable, because to that extent it is due to public habits of carelessness and to ignorance.

Turned to use instead of to smoke, such a sum as Pennsylvania lost in 1921 would have built no fewer than 134 modern, fire-resistive school houses, at an individual cost of \$200,000. Applied, as much of it might have been, to construction of good macadam roads, to erection and maintenance of hospitals or to any one of a score of public works, this amount of money would have served the two-fold purpose of improving conditions and at the same time lowering taxes.

Furthermore, there were sundry incidental losses, apart from the main one, that should not be forgotten. All of the property destroyed was automatically re-

moved, at least for a time, from municipal tax rolls, which, of necessity, meant an increased levy upon other property holders. The heavy cost of extinguishing the many individual fires that resulted in the \$26,443,596 total is one which must be reckoned with, and this expense, too, was borne by the public.

Regrettable beyond everything else, however, and completely overshadowing the combined financial burden, was the loss of life and the injuries from fire which, in company with the rest of the states, Pennsylvania had to record. Indeed, to realize that at least three-fourths of the life and property sacrifice might, with care and knowledge, have been avoided, and not to feel strongly the urgency of public instruction in the prevention of fire, is scarcely possible for any one who has at heart his own best interests and those of Pennsylvania.

#### BRUSH VERSUS SPRAY METHODS OF PAINTING

A comparative test of interior painting for cement plaster was carried out last fall under the direction of Committee D-1 of the American Society for Testing Materials.

Three identical wall spaces of soiled and unpainted cement plaster in a large hall in Carnegie, Pa., were marked off, each having an area of 205 square feet. On space No. 1, two expert brush men coated the surface in 17¼ minutes. On space No. 2 one man with a spray gun coated the surface in 12½ minutes and on space No. 3 one man with a spray gun covered the space in 12 minutes. Both of the areas showed considerably better hiding than the brushed space. The brush men worked at extreme speed.

On the ceiling work, two men, each using a spray gun, sprayed 3,400 square feet in 2 hours and 15 minutes.

Taking the ceiling and wall work together, 4,000 square feet were sprayed with 29 gallons of paint, one coat giving much better hiding than the brush work.

The paint used in this test was very heavy flat wall finish in white. This test developed that it is possible on this class of work to get much better hiding with the spray than by brushing, for there is less rubbing up of the dust and and dirt into the wet paint; moreover, more paint per coat can be applied with the spray than by hand brushing. The cost of painting the wall section, 205 feet in area, at a rate of \$1.35 per hour was 77.6 cents with the brush and 27 cents with the best spray.

An old legend tells of a magician's vase; the magician could get out of it only that which he put in. Advertising is just that. If you don't get into it the "kick" of salesmanship it is going to miss by just that much the pulling power it ought to have.

## HARDENED CONCRETE FLOORS DO NOT DUST

It is not necessary to put up with dusting cement floors. Over night a soft cement surface from which the cement dust can easily be scratched with the toe of the shoe—can be transformed into a hard, impenetrable floor that will not "sand" or crumble, even under the hardest foot traffic. Phone or write us for information.

## Proposals

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., March 28, 1923. Sealed Proposals will be opened in this office at 3 P. M., April 25, 1923, for construction (except mechanical equipment) of additional buildings, including quarters for ambulant patients, semi-ambulant patients, male attendants, female attendants, nurses and aids, residences for officers, and administrative assistants, boiler house and smoke stack, roads and approaches, for the United States Veterans' Hospital, at Chelsea, New York. Drawings and specifications may be obtained at this office in the discretion of the Supervising Architect. Proposals will be considered only from individuals, firms, or corporations possessing satisfactory financial and technical ability, equipment, and organization to insure speedy completion of the contract, and who have established a record for expedition on contracts of similar character and magnitude. The fact that any concern obtains a set of the plans and specifications from any source whatever and submits a bid shall not constitute a waiver of the foregoing stipulations. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Supervising Architect's Office, Washington, D. C., March 28, 1923. Sealed Proposals will be opened in this office at 3 P. M., April 25, 1923, for the mechanical equipment (exclusive of lighting fixtures and kitchen equipment) for the ambulant, semi-ambulant, male attendants', female attendants', nurses' and aids' administrative assistant, double officer's quarters, officer in charge and boiler house buildings, and outside services, at the United States Veterans' Hospital, Chelsea, N. Y. Specifications may be obtained at this office in the discretion of the Supervising Architect. Proposals will be considered only from individuals, firms or corporations possessing satisfactory financial and technical ability, equipment and organization to insure speedy completion of the contract, and who have established a record for expedition on contracts of similar character and magnitude. The fact that any concern obtains a set of the plans and specifications from any source whatever and submits a bid shall not constitute a waiver of the foregoing stipulations. Jas. A. Wetmore, Acting Supervising Architect.

### Statement of the Ownership, Management, Circulation, etc.

Statement of the ownership, management, circulation, etc., of The Builders' Guide, published weekly at Philadelphia, Pa., required by the Act of August 24, 1912, for April 1, 1923.

Editor, H. L. Sharpe.

Managing Editor, none.

Business Manager, Louis S. DeLone.

Publishers, Building News Publishing Co., Perry Building, Philadelphia.

Owners, Louis S. DeLone, 6419 Drexel road, Philadelphia; Samuel R. McDowell, Narberth, Pa.

Known bondholders, mortgages and other security holders holding one per cent. or more of total amount of bonds, mortgages or other securities, none.

(Signed)

Building News Publishing Co.,

Louis S. DeLone, Business Manager.

Sworn and subscribed before me this 23rd day of March, 1923.

Hugh Roberts, Notary Public.

(My commission expires April 15, 1925.)

## COMBINATION HEATING SYSTEMS FOR MILD WEATHER

*An Improvement for Homes that Will Be a Good Sales Talking Point as it Means Added Comfort and Convenience.*

BY CHARLES L. HUBBARD, M. E.

The satisfactory warming of a building in mild weather is usually a difficult matter, unless equipped with a system of automatic control, and even then waste of fuel is likely to occur through allowing the fire to gain excessive headway in order to force heat into distant or especially exposed rooms.

The purpose of the present article is to suggest combination systems whereby the amount of heat generated may be more nearly proportioned to actual requirements and also better distributed.

Among the possible combinations of this kind may be mentioned hot water with hot air, hot water with steam, and hot air with either steam or hot water.

While such combinations may often be used to advantage from time to time throughout the heating season, their greatest benefit is usually derived through temporary operation during the milder weather of spring and fall when the full capacity of the main heating system is not required, and in the case of special rooms during extremely cold or windy days in mid-winter.

For example, a direct system of steam heating may work satisfactorily during the winter, but overheat the rooms in mild weather, thus causing both discomfort and waste of fuel. An arrangement for operating the boiler temporarily as a hot-air furnace of moderate capacity will often greatly improve results in a case of this kind.

Other instances where auxiliary heating may prove an advantage occur in buildings where the main portion is satisfactorily cared for by the hot-air furnace, but where it is difficult, if not impossible, to warm one or more rooms remotely and badly located. If served at all, such rooms usually make it necessary to force the furnace beyond its economical capacity, thus overheating other rooms and wasting fuel.

Having noted some of the needs for combinations of this kind, let us consider them briefly in such detail as may enable the builder to place accurately before the heating subcontractor just what is required as to results and the general methods to be employed in order to secure them.

### Hot Water Combined With Hot Air

This is most frequently applied to third-floor rooms and to servants' quarters which may be located over an ell and not easily reached by hot air pipes

from a furnace centrally placed under the main part of the house. Such conditions do not usually call for the warming of more than two or three small rooms at the most, and these are best cared for by installing hot-water radiators and connecting them with either a coil or other form of heating surface placed in the furnace.

This may consist either of a coil suspended in the combustion chamber above the fire, or it may extend around the firepot in contact with the fuel. Some makes of furnaces are provided with cast-iron heater sections which may be substituted for a small portion of the regular firebrick lining.

Ready-made heaters are also upon the market which may be suspended above the fire and connected with the outside piping through openings tapped in the furnace plates.

The general arrangement for a system of this kind so far as the radiators and piping are concerned, does not differ from the ordinary methods of hot-water heating.

Care, however, is required in work of this kind to obtain the right proportion between the heating surface in the furnace and the radiation, in order to get sufficient heat and still not cause boiling in the system when the furnace is forced in cold weather.

The following proportions, as recommended by William G. Snow, are probably as satisfactory as any for average operating conditions.

Type and Location of Heating Surface	Square Foot of Heating Surface
Cast-iron sections suspended above fire	15 to 20
Cast-iron sections in contact with fire	40 to 60
Pipe coil suspended above fire	20 to 25
Pipe coil buried in fire	50 to 60

For heating surface buried in the fire it should be remembered that its effectiveness decreases with the depth to which it is buried. The size of the furnace for a combination system of this kind should be computed the same as though the entire work were to be done by hot air, including the rooms to be warmed by radiators.

### Hot Water Combined With Steam Heating

The principal use of combinations of this kind is in connection with industrial buildings where the main work rooms are satisfactorily heated by direct steam coils but where the advantages of hot water heating are desired in offices, drafting rooms, etc., or other special cases where better temperature regulation is required.

In cases of this kind the special rooms

are piped for hot-water heating in the usual manner, and the main supply and return pipes connected with a steam coil heater instead of a boiler.

Temperature control for one or two rooms closely connected may be obtained by means of an electric room thermostat connected with a special diaphragm valve in the steam supply to the coil.

Another arrangement is to connect an ordinary hot-water tank thermostat with the flow pipe to the radiators at some accessible point, and vary the water temperature, as may be necessary, by adjusting the indicator of the thermostat.

For the conditions shown, each square foot of brass coil surface in the tank should supply from 40 to 50 square feet of direct cast-iron radiation. The lower figure being for steam at 5 pounds pressure and the higher for 10 pounds.

In many cases a standard feed water heater will be found more convenient, in which case it will usually be necessary to reverse the connections. That is, connect the supply and return heating mains with the outlets designed for steam, in order to get the necessary area. If this is done the heater must be so erected that the condensation will drain properly to the trap.

#### *Hot Air Heating Combined With Steam or Hot Water*

This arrangement is brought about by enclosing the boiler and an extended smoke pipe within a brick chamber, thus making of it a warm-air furnace with a limited amount of heating surface. An air supply is brought into the bottom of the chamber, either by means of a return register from the hall above, or from out of doors, as may be desired, and a hot-air connection carried to the first floor as indicated.

The object of this scheme is to utilize a portion of the heat generated by a low fire during the night, or in mild weather, when the full capacity of the heater is not desired.

As a matter of fact, considerable fire may be carried without producing sufficient steam pressure to fill the supply pipes, so that as far as warming the rooms above is concerned, the fuel burned under this condition is practically wasted.

While it is true that a certain amount of heat is radiated into the basement, it does very little good as regards the rooms above. Sufficient heat may often be supplied to warm the main hall or living room and take off the chill from the rest of the house without getting up pressure at all, a desirable feature in mild weather.

Sometimes an indirect heating stack is placed directly above the boiler, in the brick chamber, which will be kept warm by vapor generated below atmospheric

pressure and thus add to the heating capacity.

While this combination may be made either with steam or water, its fullest advantage is obtained with the former because there is greater opportunity for improvement under these particular conditions.—*Building Age*.

#### SUGGESTIONS FOR MAKING PARTITIONS SOUNDPROOF

A study of the problems of making partitions soundproof has been made by the engineering experiment station at the University of Illinois, Urbana, Ill. Because certain principles of sound transmission are overlooked, partitions that would ordinarily be an effective barrier to sound occasionally fail to function as expected, and some of the possible reasons are pointed out in a bulletin (No. 127), reviewing the study of the subject at the experiment station. Sound may be transmitted from one side of a partition to the other in three ways, it is stated in the bulletin. It may progress through continuous air passages, it may pass as an elastic wave through the solid structure of the partition, or by setting the partition in vibration it may originate sound waves on the further side.

"These actions are quite readily understood," according to the bulletin, "by remembering that sound consists of a series of compressions and rarefactions that progress rapidly through a medium without interruption unless they meet new medium with a different elasticity or density. For instance, sound waves in air proceed without hindrance through air passages, such as ventilation openings in a partition. If, however, the passages are small in cross-section, as in the case of a porous material, the progress is hindered and a certain amount of absorption of the energy takes place due to the friction set up between the vibrating air column and the sides of the pores.

"In case the partition is impervious to air, the direct progress of the waves is interrupted. A third partition is set in vibration, and thus originates new waves on the side opposite the incident sound. For a thicker, more rigid partition, the vibrations are smaller, and a very considerable part of the energy is reflected. The transmission in this case takes place by compressional waves communicated to the solid material of the partition. The amount of energy thus transmitted is usually quite small.

"In view of these considerations, a soundproof partition should be as rigid and free from air passages as possible. For effective sound-proofing of a group of rooms, the partitions, floors, and ceilings between adjacent rooms should be made continuous and rigid. Any neces-

sary openings for pipes, ventilators, doors, and windows should be placed in outside or corridor walls, where a leakage of sound will be less objectionable.

"In case the sound is generated in the building structure, as the vibrations set up by a motor fastened to the floor, the compressional waves proceed through the continuity of solid materials. In order to stop them, it is necessary to make a break in the structure so as to interpose a new medium differing in elasticity and density. For instance, the vibrations of a motor may be minimized by placing a layer of hairfelt, or similar air-filled material, between the supporting base and the floor. Where the machine is quite heavy, footings may be made of alternate layer of asbestos, lead and leather. Bolt- ing through this material will reduce the insulation, because the vibrations in this case will pass easily through the bolts to the floor. The insulation should thus be left without any bridging over of discontinuities. Air gaps in masonry will be effective if the air space is not bridged over at any point. A floor floated on sand, sawdust, or hairfelt would approximate this condition. The edges of the floor should be insulated from the walls by felt or similar material.

The other day a prominent local architect called up to inquire regarding a concern that has not advertised with us for two years. "I saw their ad. some years ago in the Guide," said the architect, "and am unable to recall just where they are located." We gave him the address and learned subsequently that as a result the firm bagged a big order. How many similar orders, from architects who wouldn't take the trouble to look them up, that same concern has missed in the course of the past two years it would interest us to know.

Don't crowd your space, Mr. Advertiser. Better play up one selling point at a time than to try to get everything into one ad. and kill every possible chance for display. An ad. should stand out. It should be easily read. It should draw the attention of the reader. A carload of detail can't be crowded into a few inches of space and still retain the quality of sticking out as all good advertising should.

Man and the giraffe are the only two living things that can't swim naturally. Throw a day-old kitten into the Mississippi and it will paddle its way to shore. The giraffe can't swim because he's not built that way. Man can't swim, just because he is afraid. The chances are that the reason you are not in the swim—financially or otherwise—is because you are afraid.—Glen Buck.

## HARDENED CONCRETE FLOORS DO NOT DUST

It is not necessary to put up with dusting cement floors. Over night a soft cement surface from which the cement dust can easily be scratched with the toe of the shoe—can be transformed into a hard, impenetrable floor that will not "sand" or crumble, even under the hardest foot traffic. Phone or write us for information.

## As The Editor Sees It

**M**R. HERBERT HOOVER, Secretary of Commerce, has forcefully emphasized the conditions confronting the building industry in the following letter and report therein submitted to President Harding:

March 17, 1923.

His Excellency  
The President,  
Miami, Florida.,

Dear Mr. President:

I am in receipt of your letter of March 3d as follows:

"The Administration, in one way or another, has the direction of Congress to carry on a very considerable volume of construction work. I would be glad to have the advice of the Department of Commerce as to the policy which ought to be pursued in view of the present economic situation in the building industries, with a view to determining how much to speed up on the construction program to which we are committed."

In response thereto I directed that the Department should conduct a survey of the situation in the construction trades, a summary of which is attached hereto. I shall not trouble you with the vast amount of detailed data, but these conclusions bring out several fundamentals:

1. The year 1922 was a year of very large employment and activity in the construction trades and at the end of

the year stocks of construction materials were very much reduced. Since the beginning of the present year there has been even more activity than in the same period last year and the contracts let in the past few months are of larger volume than any hitherto entered into in a similar period. Advance orders for construction materials are upon a very large scale.

2. Labor in the construction trades and in the manufacture of materials is not only at full employment but there is actually a shortage in many directions.

3. Transportation facilities available for the building materials are fully loaded and almost constant car shortages are complained of with consequent interruption in production.

My conclusion from all this is that, at least for the next several months, the trades will be fully occupied in private construction, all of which is generally needed by the country.

For the Government to enter into competition at the present moment will give no additional employment to labor and no additional production of materials but must in the broad sense in the end displace that much private construction. The governments, nationally and locally, are in a much better position to hold construction work in abeyance than are private concerns, and are in better positions to speed up in times of less demand

as we did in the last depression as the result of the Unemployment Conference. We can by this means contribute something to a more even flow of employment not only directly in construction work but in the material trades.

I would recommend, therefore, that you direct the different divisions of the Government to initiate no new work that is not eminently necessary to carry on the immediate functions of the Government and that there should be a slowing down of work in progress so much as comports with real economy in construction, until after there is a relaxation in private demands.

Yours faithfully,  
HERBERT HOOVER.

### SUMMARY OF A SURVEY OF THE BUILDING SITUATION MARCH 16, 1923

The extensive data submitted with this memorandum show that the capacity of the construction industry in the next few months at least will be fully utilized by the demands for private construction and the work of state and local governments already under contract or critically necessary for maintenance.

The volume of construction carried out in 1922 is indicated by the following figures on building materials:

(Index numbers based on 1913 activity as 100)

**DRAWING  
MATERIALS**

**CHARLES H. ROBBINS, JR.**

1209 Arch Street,  
BELL PHONE, SPRUCE 1256

Philadelphia  
KEYSTONE PHONE, RACE 3519

**BLUE  
PRINTS**

	1922	1921	1920	1919
Lumber production	103	80	94	94
Cement production	124	107	109	87
Fabricated steel sales	168	87	130	125

Lumber production in 1922 was above any year in the past decade, while fabricated steel sales were 16 per cent. over those for 1916, the highest previous year. Cement shipments were greater than production, and were 20 per cent. higher than in 1920, the previous record year.

Contracts awarded for construction work in 1922, compared with the three previous years, are shown by the following index numbers, based on 1919 figures as 100:

#### Contracts Awarded

	1922	1921	1920	1919
Total value	130	91	98	100
Total floor space	102	69	72	100

Actual building activity in 1922 in relation to 1919 was greater than the figures on contracts awarded show. A large amount of building contracted for in the last months of 1921 was carried over into 1922, whereas there was practically no such carry-over into 1919.

There was practically full employment of labor during 1922, and an actual shortage of labor in many localities.

Price levels of construction materials advanced during the year as shown by the following index numbers:

Year and Month	Frame House materials	Brick House materials	Wholesale prices
1922			
January	174	179	157
February	169	174	156
March	169	173	155
April	168	172	156
May	173	176	160
June	178	181	167
July	181	184	170
August	189	193	172
September	193	197	180
October	196	199	183
November	196	201	185
December	192	198	185
1923			
January	195	199	188
February	198	201	192
Percent of increase February 1923, over February, 1922	17%	16%	23%

At the end of the year stocks of building materials were greatly reduced.

Since the beginning of this year building activities have materially increased over those of a year ago, as shown by the following index of contracts awarded for January and February:

(Index numbers, 1919—100)

	Feb., 1923	Jan., 1923	Feb., 1922	Jan., 1922
Total value	107	101	83	77
Total square feet	89	83	64	65

Residential, value ..143 158 107 107  
Residential, sq. ft...112 122 82  
Actual totals in dollars for 27 north-eastern states are as follows:

	Jan. and Feb., 1923	Jan. and Feb., 1922
Total value	\$447,271,000	\$343,685,110
Total sq. ft.	80,558,400	60,321,300
Residential, value	212,769,900	151,431,800
Residential, sq. ft.	47,253,300	34,568,800

The limiting physical factors in the amount of construction to be undertaken in the future are labor, materials, and transportation.

It may be said generally that labor is in full employment at the present time, and the increase in construction demand during the spring months on the basis of contracts already let indicates even increased shortages over those now existing. Considerable numbers of material manufacturers are running at full capacity, and where production capacity is under-employed at the present time it is largely due to shortage of labor.

Advance orders are greatly in excess of those a year ago. Combined figures of seven large lumber associations show an increase of 49 per cent. in orders received during the first nine weeks in the year, over the same period in 1922. Unfilled steel orders of the largest company were 71 per cent. greater at the end of February than a year before. Sales of fabricated steel for the first two months of 1923 were 85% above the same period in 1922. January orders for sanitary pottery made a new high record for all time. Trade reports for other commodities not covered by adequate statistics indicate similar tendencies.

The transportation situation is indicated by the car shortage during the last few months as follows:

#### Car Shortages at End of Month

	1922	1921
December	82,927	110
	1923	1922
January	73,269	642
February	80,633	599

From the above it would appear that the building and construction necessities of the country are being taken care of so far as labor, material manufacturing, and transportation facilities permit, and that the addition of Governmental projects at the present time will not add to the production of materials or to the amount of employment in the country, but would in fact mean simply displacement of construction that could be undertaken at private hands.

**THE TRUSCON LABORATORIES**

## HARDENED CONCRETE FLOORS DO NOT DUST

It is not necessary to put up with dusting cement floors. Over night a soft cement surface from which the cement dust can easily be scratched with the toe of the shoe—can be transformed into a hard, impenetrable floor that will not “sand” or crumble, even under the hardest foot traffic. Phone or write us for information.

## Miscellaneous Construction News

**Building (alts. and add.),** 211 East Front street, Wilmington, Del. Architect, John A. McKibbin, Industrial Trust Building, Wilmington, Del. Owner, Harry Greenberg, 213 East Front street, Wilmington, Del. Brick, 3 stories, 16x35 feet, general alterations. Plans in progress.

An old legend tells of a magician's vase; the magician could get out of it only that which he put in. Advertising is just that. If you don't get into it the "kick" of salesmanship it is going to miss by just that much the pulling power it ought to have.

## Proposals

### HALL OF CHEMISTRY

at

West Virginia University  
Morgantown, W. Va.

### NOTICE TO CONTRACTORS

Sealed proposals will be received by the STATE BOARD OF CONTROL at its office in Charleston, West Virginia, until 3.00 P. M., Friday, June 1, 1923, for doing all work and furnishing all material necessary to complete the building described below, according to the plans and specifications prepared therefor by PAUL A. DAVIS, 3rd, & DUNLAP, Architects, Philadelphia, Pa.

The building is to be 305 feet 7 inches x 79 feet 0 inches, four stories, with basement and attic, with extension of one story and basement. Fireproof construction except main roof, which is steel, wood and slate. Exterior of face brick with granite base, Indiana Limestone face first story, and Indiana Limestone trimmings above. Interior brick finished walls. Concrete ceilings. Interior wood finish of oak. Interior partitions brick and tile. Stairs iron. Entrance vestibule marble and plaster. Floors of terrazzo, marble, tile, composition, cement and asphalt. Wrought iron railings. Electric elevator and lift.

Plans and specifications, blank form for bids and blank form of proposal bond will be mailed by the State Board of Control when request for plans is accompanied with check for \$25.00, which amount will be refunded on receipt of bona-fide bid on or before time named above and proposal bond properly filled out and return of plans.

STATE BOARD OF CONTROL  
By JAMES S. LAKIN, President  
Charleston, W. Va.

AN embracing and authoritative display of architecture, building and building materials will form a considerable part of the Philadelphia Palace of Progress, a civic-industrial exposition to be held in the Commercial Museum May 14-26, to celebrate the 240th anniversary of the founding of Philadelphia. The exposition will represent the civic, municipal and industrial advancement of Philadelphia.

The exhibit will occupy a large section of the exposition, and has been designated "The Architectural and Building Division."

Mr. D. Knickerbacker Boyd, of the firm of Boyd, Abel and Gugert, Architects, has consented to act as Director of this division. Mr. Boyd has served as secretary and vice-president of the American Institute of Architects, president of its Philadelphia Chapter, and during the war, as chief of the Building Materials Information section of the U. S. Housing Corporation.

Mr. Boyd has secured the co-operation of a number of architects, engineers and builders in arranging the plans for the exhibit. Among those who have accepted are: Victor D. Abel, Walter F. Ballinger, John I. Bright, Irwin T. Catharine, Francis A. Gugert, Philip H. Johnson, Albert Kelsey, Charles E. Oelschla-

ger, Oliver Randolph Parry, Andrew J. Sauer and Clarence E. Wunder.

It is Mr. Boyd's plan to arrange the exhibits of architects, builders and dealers in building materials, equipment and devices in such a way as to form an artistic and comprehensive exhibit representing the advancement of industrial, home and institutional construction in Philadelphia.

One of the most effective features of the architectural and building division will be a complete model home, to be erected by a prominent Philadelphia builder, under the direction of Mr. Boyd. The home will be outfitted by Strawbridge and Clothier, a leading department store of Philadelphia, and it will be occupied during the two weeks of the exhibit by a young married couple, who will act as hosts for the Philadelphia Palace of Progress.

Another feature of interest will be a "Service to House Owners," in which will be displayed charts and figures to guide home owners and prospective home buyers.

The Annual Meeting of the Philadelphia Building Congress will be held after a luncheon at the Hotel Adelphia on Monday, April 23rd, at 12.30 P. M.

Mr. George Wentworth Carr, Chairman of the Speakers' Bureau of the Sesqui-Centennial Exposition Association, has been invited to present the intimate plans of the 1926 Fair in order to secure pledge of co-operation of the various branches of construction that such work will be done efficiently, avoiding interference with normal building requirements.

The Vice President of the New York Building Congress, Mr. Andrew J. Post, of the firm of Post and McCord, contractors, New York City, will be the guest of honor and speaker of this meeting. The New York Congress has over five hundred members, including most of the leading architects, engineers, builders, contractors, material interests and construction labor leaders. Mr. Post will tell what the New York Building Congress has accomplished.

Officers and Directors for the next year are to be elected.

The other day a prominent local architect called up to inquire regarding a concern that has not advertised with us for two years. "I saw their ad. some years ago in the Guide," said the architect, "and am unable to recall just where they are located." We gave him the address and learned subsequently that as a result the firm bagged a big order. How many similar orders, from architects who wouldn't take the trouble to look them up, that same concern has missed in the course of the past two years it would interest us to know.

## As The Editor Sees It

### EQUITABLE CONTRACTS IN SIGHT

Team-Work Securing Justice\*

BY W. F. CREIGHTON

*Foster and Creighton, Nashville, Tenn.*

I WOULD like to say right now that I wish I had the power of Mr. Bent, or Demosthenes, or somebody else, to get the message I have in mind on the subject of contracts home to contractors. I find that, generally speaking, contractors know less about the basic, fundamental rights to which they are entitled under a contract than any other set of men. If I were just able to bring home to you what your rights are under a contract, which of necessity you should know, I would feel that I had accomplished a great deal. I think one reason that this matter is so close to me is that our company has worked under different forms of contract during its history, which, measured by standards of this modern California country, is pretty old. We were organized in 1850. The first period of its history shows that we were engaged in building contracts. In its middle period we were engaged in engineering construction—that is, on roads, locks, dams, bridges, etc., or work that was done entirely under the supervision

\*Address before the Highway Division, Annual Meeting, A. G. C., Los Angeles, Feb. 1, 1923.

and specifications of engineers. In 1914 work of this nature became very scarce and we were forced into building construction. Very shortly after that we ran across the form of contract prepared by the American Institute of Architects, which is undoubtedly the fairest and most equitable instrument we have ever met. Its principal advantage is the *arbitration clause*. Since then we have done several million dollars' worth of work under that form without complaint or argument or any difference of opinion that could not be equitably and amicably settled by conferences with the architect. We have never resorted to arbitration on a single question. Before I left home a subcontractor appealed through us for arbitration to the amount of \$150, and I think that rather than break our record we will pay them that amount out of our own pocket. This form covers everything that might happen in building and clearly sets forth the proper solution.

#### *Federal Highway Contracts*

In 1920 Federal highway work in our State got started and we thought we would go back to engineering work. We went to the Highway Department for specifications, and it was like going out of a lighted room into a dark one. Immediately I wrote to the chief to interpret the specifications on 20 points. He laughed at me, thought it was ridiculous for a contractor to concern himself with such ques-

tions, and we received no satisfactory reply. Well, we put in our first bid—I think it was for \$600,000—10 percent. to protect ourselves against unjust contract provisions and possible unfair inspection. We didn't get the job. Another came and we put in the same thing and didn't get it. Finally we thought we would do as the rest of the fellows did, if we would get a contract—put our necks in the noose and trust the Lord for fair treatment. A small job came up on which the grading had been done; the remaining work consisted of shaping the subgrade and surfacing, which was specified to be an eight-inch, hand placed base, course to be napped, choked and rolled with two-and-a-half inches of crushed stone and two gallons of asphalt to the square yard, applied in the usual manner. It was about ten miles long and cost about \$150,000. We thought we could not go broke on this size contract without adding the 10 percent. We secured the contract and immediately trouble began. The first thing they did to us was to give us a typewritten copy of an addenda to specifications, which required choking the base space in a very expensive way. I first thought of complaining about that, but after carefully reading the printed specifications on which our contract was based, by a stretch of the imagination I could see where they could make us do this, so I didn't complain. We always have followed the idea of living up to the specifications literally,

**DRAWING  
MATERIALS**

Philadelphia  
KEYSTONE PHONE, RACE 3519

**BLUE  
PRINTS**

and making the other fellow do the same. The next question that arose was the thickness of the base, which was specified to be eight inches thick, no more nor less. They required us to use ten-inch wooden blocks and build the base up to this thickness. The work was carefully inspected, and we were required to make the base full ten inches thick, which they thought would roll down to eight. It did not. After a mile had been completed I carefully measured the thickness and found it to be nine and three-fourths to ten inches, or practically two inches more than the specifications. I protested to the chief engineer, but received no satisfaction except orders to proceed.

This difference of two inches amounts to about \$15,000 under our unit prices; and, since I cannot arbitrate or sue the State, we have no resource except to have a bill introduced in the legislature to get our money, unless the Highway Commission will voluntarily treat us fairly. Under the contract we have no right of redress.

The next question was ignorant inspection. I do not attempt to tell you men about this, which I am sure you have daily to contend with on your own work. When complaints were made to the chief engineer, naturally for the morale of his organization he would defend them and would say that he knew what he intended when he wrote the specifications; and our reply that we did not know what was in his mind, but only what was written, on which our money was placed did not interest him.

#### *Injustice Resented*

There is another serious thing about this unjust contract—it creates a feeling of resentment on the part of the superintendent and foreman; they feel that they are unjustly getting the hot end of every decision; and, since you are holding them responsible for profits, they do not know what to do. They realize that they cannot get protection in a businesslike and honest way, and everyone knows you have to watch a certain class of superintendents to prevent them from getting even in the "wrong way." It creates a tendency to slight the work in some way to get even. When that is done the contractor suffers. In any event it does not instill a spirit of co-operation on the part of the contractor or create a pride in the completed work. There is a serious point, and it is the reason that contractors up to a few years ago were thought to be crooks. That form of contract in which you have no right has a tendency to make crooks of us. It is human nature to get even—if not fairly, then in another way. That is one reason I am so strong for a fair contract; as it enables one to sit down and look the engineer squarely in the eye and say: "I am your equal; let us dis-

cuss the question amicably and not have to beg for what we are entitled to." When I first graduated from the university in 1904, every time engineers got together, the relation between the engineer and the contractor was discussed. It was agreed by them that the engineer was the arbitrator; that he stood as a judge between the owner and the contractor; that he didn't lean towards either side. That is not the case now nor ever was. He cannot be the arbitrator. By the very virtue of his employment, he is the agent of the owner. If they will allow us to pay him half his salary we are willing for him to be sole arbitrator. But so long as one party to the contract pays any man—whether it be the United States Government, the State, city or a private corporation—he cannot be an unbiased arbitrator, but is the agent of the owner; and for the agent of one party to a contract to be the sole arbitrator is fundamentally wrong.

In Nashville we have an association of engineers, contractors and architects, among which are several prominent men. When the contractors' time came to present a paper, I was the goat and used the subject: "The Engineer from the Contractor's View Point;" and in the paper I talked to them very plainly. I was able to give them specific instances and call attention to particular cases that they could not deny. At the conclusion Hunter McDonald, past President of the American Society of Civil Engineers and Chief Engineer of the N. C. & St. L. Railway—incidentally an advocate of the arbitration clause—said: "Gentlemen, this is a serious indictment; it is up to us to clear our skirts."

#### *Improvement In Prospect*

A joint committee was formed to report on a fair contract provision. This committee recommended seven points. It was unanimously approved and referred through the American Council to a joint committee composed of the A. G. C., A. S. C. E., A. S. M. E., A. I. A., and others. Similar expressions were forwarded to the joint committee from all the various societies throughout the country and other places; and you would be astonished, if you do not already know, how nearly these points were the same—even the wording, in many cases, was the same. Another feature of the result of that conference was that the A. G. C. went before the Tennessee Highway Commission and put before that body several specific criticisms of their specifications, which they agreed to; but we have not been advised that these specifications have been rewritten yet.

From this point work on the question of an equitable contract has been done by our A. G. C. committees and published

## HARDENED CONCRETE FLOORS DO NOT DUST

It is not necessary to put up with dusting cement floors. Over night a soft cement surface from which the cement dust can easily be scratched with the toe of the shoe—can be transformed into a hard, impenetrable floor that will not "sand" or crumble, even under the hardest foot traffic. Phone or write us for information.

### SEVEN MILLION DOLLARS

Surplus capital not in broker or loan company's hands, but a private party, will loan any amount on first mortgages. Give complete details, first letter stating amount wanted and etc.

Finance, care of "Builders' Guide," Philadelphia, Pa.

Kober Const. Co., 34 South Seventeenth street, Philadelphia.

**Twin Residences**, Pottstown, Pa. Architect, John Charles Norton, Ardmore, Pa. Owner, Samuel R. Haws, Ardmore, Pa. Brick and plaster, 3 stories, 18x40 feet each, tile and slag roof, hardwood floors, hot water heating, electric lighting, tile work, sun porches. Contract awarded to George Grimley, Pottstown, Pa.

**Coal Yard Addition**, Norristown, Pa. Architect, private plans. Owners, Stony Creek Railroad Co., Nooton Coal Yard, Norristown, care of Philadelphia & Reading Railroad, Reading Terminal, Philadelphia. Contract awarded to Curtis Grindrod Co., 10 South Eighteenth street, Philadelphia.

**Garage Storage Building**, Ardmore, Pa. Architect, John Charles Norton, Ardmore, Pa. Owners, Hale Motor Co., Ardmore, Pa. Brick, steel, concrete block, 1 story, 54½x145 feet, certainteed built-up roof, cement floors, steam heating, electric lighting, hollow metal skylights and doors. Contract awarded to Main Line Const. Co., Ardmore, Pa.

**Road Work**, Pennsylvania. Owners, State of Pennsylvania, State Highway Department, Harrisburg, Pa. The following contracts awarded:

Butler County, Route 214, Fairview Township. One course reinforced concrete and hillside vitrified brick. \$117,740.50.

Crawford County, R-200, Blooming Valley Borough and Richmond Township. One course reinforced concrete. Contract awarded to Fort Pitt Const. Co., Pittsburgh, Pa. \$328,978.10.

Crawford County, R-271, Oil Creek Township and Hydetown Borough. Either bituminous surface course on concrete foundation or one course reinforced concrete. Contract awarded to Smethport Const. Co., Carlton, Pa. \$170,401.

Crawford County, R-85, A-2245, Spring Township and Springboro Borough. Either bituminous surface course on concrete foundation or one course reinforced concrete. \$242,154.12. Contract awarded to Henry W. Horst Co., Rock Island, Ill.

Mercer County, A-2106, Perry Township. Either bituminous surface course on concrete foundation or one course reinforced concrete. Contract awarded to Henry W. Horst Co., Rock Island, Ill. \$236,015.90.

Clarion County, Route 214, Appli. 2233, Clarion and Monroe Townships. One course reinforced concrete and hillside vitrified brick. Contract awarded to F. S. Wilson, Kittanning, Pa. \$162,067.10.

Clarion County, R-66, A-1939, Clarion Township and Borough. One course reinforced concrete. \$119,199.20. Contract awarded to L. H. Hileman Const. Co., New Kensington, Pa.

Northampton County, A-2225, North Catasauqua Borough. One course reinforced concrete. \$26,614.24. Contract awarded to Monroe Miller & Sons, Northampton, Pa.

Northampton County, A-2252, Wilson Borough. One course reinforced concrete. \$38,656.05. Contract awarded to J. E. & H. J. Miles, Easton, Pa.

York County, R-216, A-2175, Chanceford Township and Lower Chanceford Township. Either bituminous surface course on concrete foundation or one course reinforced concrete. \$214,897.30. Contract awarded to Comerford Const. Co., Fifth and Sansom streets, Philadelphia.

York County, 332, A-2179, East Prospect Borough, Windsor and Lower Windsor Townships. Either bituminous surface course on concrete foundation or one course reinforced concrete. \$214,972.10. Assigned to Souder Const. Co., Lancaster, Pa.

York County, R-333, A-2180, Sec. 3, Hope-well Township. Either bituminous surface course on concrete foundation or one course

reinforced concrete. Assigned to W. C. Guncheon & Co., Smethport, Pa. \$109,690.34.

York County, R-333, Winterstown Borough. Either bituminous surface course on concrete foundation or one course reinforced concrete. Contract awarded to A. Grant Raub, Red Lion, Pa., \$183,951.29.

## New Jersey Construction News

**Church (alts.)**, Trenton, N. J. Architect, William Klemann, First National Bank Building, Trenton, N. J. Owners, Central Baptist Church, Montgomery and East Hanover streets, Trenton, N. J. Architect selected.

**Apartment (alts. and add.)**, Trenton, N. J. Architect, William Klemann, First National Bank Building, Trenton, N. J. Owner, Dr. William J. Hall, The Leonard Apartments, Bellevue and Prospect streets, Trenton, N. J. Brick, 3 stories, 34x60 feet, slag roof, hardwood floors, tile work, electric lighting. Plans in progress.

**Nursery**, East Trenton, N. J. Architect, J. O. Hunt, Hunt Building, Trenton, N. J. Owners, Carolyn Stokes Nursery, care of architect. Brick, 2 stories, 30x45 feet, slag roof, hardwood floors, vacuum heat, electric light, metal lath, tile and marble work, skylights. Architect ready for bids.

**School**, near Westville, Depford Township, Gloucester County, N. J. Architect, H. A. Hill, Broad Street Bank Building, Trenton, N. J. Owners, Depford Township School Board, H. I. Clement, Westville, N. J. Brick, 1 story and basement, 6 rooms (heating, plumbing and electric work reserved), shingle roof, maple floors, hollow tile, metal lath. Plans in progress. Will be ready for bids in two weeks.

**Town Hall**, Altha, N. J. Architect, A. D. Chidsey, 341½ Northampton street, Easton, Pa. Owners, Borough of Altha, Carl Biet, Altha, N. J. Tile, 2 stories, 30x80 feet, slag roof, pine floors, hollow tile, roof ventilators (heating, electric work and plumbing reserved), ornamental iron work. Plans in progress.

**Residence**, Westfield avenue, Trenton, N. J., \$6,000. Architect, private plans. Owner, William Hicks, 1402 West State street, Trenton, N. J. Brick, stucco, 2½ stories, 22x40 feet, slate roof, hardwood floors, hot air heat, electric light, tile work. Owner will build.

**School**, Phillipsburg, N. J. Architect, E. H. Wenzelberger, 3 Centre Square, Easton, Pa. Owners, School Board, care of Alfred Case, secretary, Phillipsburg, N. J. Brick, 1 story, 119x104 feet, slate roof, pine floors, hollow tile, metal lath, tile and terrazzo work. Owners will take bids May 1st.

**Theatre, Arcade and Store Building**, Kentucky avenue and Boardwalk, Atlantic City, N. J. Architects, Hoffman Henon, Inc., Finance Building, Philadelphia. Owners, Stanley Company of America, 1218 Market street, and Guilford's, Inc., 1038 Market street, Philadelphia. Brick, steel, concrete, stone and terra cotta, 170x190 feet. Architects taking sub-bids.

**Store and Apartment**, Atlantic City, N. J. Architect, D. Levy, 949 Hamilton street, Allentown, Pa. Owners, H. C. M. Realty Co., Louis Max, Jr., secretary, 20 North Indiana avenue, Atlantic City, N. J. Brick, 3 stories, 80x120 feet, slag roof, hardwood floors, tile and marble work, hollow tile, hot water heat, electric light, steel skylights. Architect sub-letting.

**Bank Building**, Gloucester, N. J. Architects, Lackey & Hettle, 509 Market street, Camden, N. J. Owners, Gloucester City Trust Co., Gloucester, N. J. Brick, cut stone and reinforced concrete, 1 story, 70x48 feet, slag

roof, cement floors, waterproofing and damp-proofing, iron work, bond, tile work, metal lath, steam heat, electric light. Architects taking bids due April 27th.

**School**, Haddon Heights, N. J. Architect, Charles R. Piddle, 136 South Fourth street, Philadelphia. Owners, Board of Education, Haddon Heights, N. J. Lowest bidders: Wills Bill Co., 1706 Sansom street, Philadelphia, \$329,923; Friel McLeister Co., Inc., 1615 Spruce street, \$333,333. Heating and ventilating, United Plumbing & Heating Co., \$39,500. Plumbing, United Plumbing & Heating Co., \$16,600. Electric, Strang Electric Co., 214 South Seventh street, Philadelphia, \$7,513.

**Laundry (add.)**, Third and Taylor streets, Camden, N. J. Architect, Thomas Stephens, Temple Building, Camden, N. J. Owners, Domestic Laundry, 10 South Third street, Camden, N. J. Reinforced concrete and steel, 3 stories, slag roof, concrete floors, electric light, brick chimney, roof ventilators, rolled steel skylights. Revised plans in progress.

**School for Colored Youth**, Haddonfield, N. J. Architects, Lackey & Hettle, 509 Market street, Camden, N. J. Owners, Board of Education, Haddonfield, N. J. Lowest bidders: Wills Bill Co., 1706 Sansom street, Philadelphia, \$28,982. Heating, F. D. Windell, 1713 Sansom street, Philadelphia, \$3,370. Plumbing, W. J. Kelly, Ferry avenue and Van Buren street, Camden, N. J., \$2,579. Electric, A. A. Duckert, Camden, N. J., \$1,015.

**Grade School**, Grove street, Haddonfield, N. J. Architects, Lackey & Hettle, 509 Market street, Camden, N. J. Owners, Board of Education, Haddonfield, N. J. Lowest bidders: Barnes & McLaughlin, 17 South Seventeenth street, Philadelphia, \$51,700. Heating, F. D. Windell, 1713 Sansom street, Philadelphia, \$5,318. Plumbing, W. J. Kelly, Ferry avenue and Van Buren street, Camden, N. J., \$3,080. A. A. Duckert, Camden, N. J., \$1,806.

## New Jersey Contracts Awarded

**Store and Apartments**, Northeast Corner Maurice and Chestnut streets, Camden, N. J. Architect, private plans. Owner, Mrs. Mary Naden, 773 Kaighn avenue, Camden, N. J. Brick and concrete, 2 stories, 20x80 feet, slag roof, cement and wood floors, iron work. Contract awarded to Potts Brothers & Cooper-son, 1016 Cherry street, Philadelphia.

**Community Garage**, Trenton, N. J. Architect, William Klemann, First National Bank Building, Trenton, N. J. Owner, Dr. E. H. Ginnelly, care of architect. Brick, 1 story, 103½x37 feet, slag roof, concrete floors, electric lighting. Contract awarded to William Burton, American Mechanics Bank Building, Trenton, N. J.

**Residences (2)**, Trenton, N. J., \$5,000. Architect, private plans. Owner, Anna P. Callas, care of builder. Frame and shingle, 2½ stories, 28x43 feet, slate roof, pine floors, electric lighting, hollow tile. Contract awarded to H. Pindum, 233 William street, Trenton, N. J.

**Storage and Warehouse**, Paulsboro, N. J. Architects, Lackey & Hettle, 509 Market street, Camden, N. J. Owner, Edward McIntyre, Paulsboro, N. J. Brick, steel and cast-iron, 2 stories, 76x40 feet, slag roof, pine and cement floors, steam heating, electric lighting, metal lath, rolled steel sash, iron work. Contract awarded to Wills Bill Co., 1706 Sansom street, Philadelphia.

Business is founded on reciprocity and co-operation. Any other plan than this spells bankruptcy. The successful business nowadays has a heart and a soul.

## Miscellaneous Construction News

**Bank**, Claymont, Delaware. Architect, Edward C. May, Dupont Building, Wilmington, Del. Owner, name withheld. Brick, structural steel, 1 story, 37x44 feet, hot water heat, slag and tin roof, composition floors, bank fixtures, ornamental iron work. Plans in progress.

**Club House**, location withheld. Architect, C. R. Hope, Dupont Building, Wilmington, Del. Owners, Dupont C. C., care of Dr. Bradshaw, Dupont Building, Wilmington. Stone and stucco. Sketches in progress.

**Store (alts. and add.)**, Market street, Wilmington, Del. Architect, R. C. Tindall, 914 Orange street, Wilmington, Del. Owner, name withheld. Brick, steel, 2 stories, 32x100 feet. Plans in progress.

**Residence**, Thirty-fifth and Market streets, Wilmington, Del. Architects, Brown & White-side, Dupont Building, Wilmington, Del. Owner, John Malascalza, 213 King street, Wilmington, Delaware. Brick, cut stone, 2½ stories, 32x39 feet, composition roof, hardwood floors, electric light, tile work, marble work. Architect taking bids due as soon as possible.

**Building (alts. and add.)**, 211 East Front street, Wilmington, Del. Architect, John A. McKibbin, Industrial Trust Building, Wilmington. Owner, Harry Greenberg, 213 East Front street, Wilmington, Del. Brick, 3 stories, 16x35 feet, general alterations. Contract awarded to J. A. Bader & Co., Lackey Building, Wilmington, Del.

**Residence**, Irving Park, Greensboro, N. C. Architect, Charles Barton Keen, Wachovia Bank and Trust Building, Winston-Salem, N. C. Owner, William Y. Preyer, Greensboro, N. C. Architect taking bids due May 14th at new address.

**Bakery Building**, Buffalo, N. Y. Architect, A. G. Zimmerman, 85 Ninth Avenue, New York City. Brick, reinforced concrete, steel and cut stone, Barrett and tile roof, cemen and maple floors, hollow tile, safety treads, roof ventilators, metal weather strips, waterproofing, terra cotta, iron work, bond, kalamein and hollow metal doors, rolled steel sash and skylights, hollow metal skylights, marble and terrazzo work, metal lath (heating, electric light, plumbing and elevators reserved). Architect taking bids due May 7th.

**Warehouse and Office Building**, Southeast Corner Fourth and T streets, Washington, D. C. Architects, The Ballinger Co., Twelfth and Chestnut streets, Philadelphia. Owners, The Sanitary Grocery Co., Washington, D. C. Reinforced concrete, brick and steel, 4 stories and basement, 150x250 feet, slag roof, concrete floors, waterproofing, iron work, bond, kalamein doors, rolled steel sash (heating, electric work, elevators and plumbing reserved). Contract awarded to C. H. Tompkins Co., 1612 Park road, Washington, D. C.

Chas. Barton Keen, Architect, Registered, announces that owing to the constantly increasing growth of his practice in the South, it is necessary to establish his Home Office in Winston-Salem, North Carolina, and on May 1 will open offices at Wachovia Bank and Trust Building, Winston-Salem, N. C.

Mr. Keen has associated with Mr. G. Edwin Brumbaugh, Architect, to assist in taking care of his Philadelphia Practice with offices at 1733 Real Estate Trust Building.

## Proposals

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., April 17, 1923. Sealed Proposals will be opened in this office at 3 P. M., May 14, 1923, for repairs to Medical Officer's Residence, No. 501, of the P. H. S. Hospital, at Perryville, Md. Specifications may be obtained from the Superintendent of Construction at the site, or at this office, in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

TREASURY DEPARTMENT, Office of the Supervising Architect, Washington, D. C., April 17, 1923. Sealed Proposals will be opened in this office at 3 P. M., May 14, 1923, for painting roofs, etc., at the United States Public Health Service Hospital No. 42, at Perryville, Md. Specifications may be obtained from the Superintendent of Construction at the site or at this office in the discretion of the Supervising Architect. Jas. A. Wetmore, Acting Supervising Architect.

Wynne A. Murphy, Robert P. Quigley and William J. O'Connell, formerly with Irwin and Leighton, Contractors and Builders, Philadelphia, have formed a co-partnership under the name Murphy-Quigley & Co., General Contractors and Builders, and have opened offices at 1524 Sansom Street, Phila.

(Continued from page 260)

in the *Constructor*. Mr. Wilson, our chairman, was in Kansas City and got 15 points on an equitable contract agreed to by the State Highway Officials. Let me predict to you that, although the chief engineer of the Tennessee Highway Department was out there, we are not going to get any improvement. In the convention, as in Nashville, they agreed to our 50 points, but never put them into effect.

This is my suggestion for settlement of the question. Through Mr. Hoover's suggestion to President Harding, Gordon A. Ramsey of Washington has been appointed chairman of a joint committee on interdepartmental contracts. I have been informed that there are about 100 bureaus of the Federal Government in Washington that are making contracts of various kinds, and each bureau has a different form of contract. Mr. Hoover is, we all agree, a very practical man. He brought the matter to the President's attention and Mr. Ramsey was instructed to work out a tentative form of equitable contract, which would result in lower bids on Government work. A tentative report of this joint committee was sent to our Association in Nashville for criticism. I took a copy before the Nashville Chapter of the A. G. C. and we sent recommendations to Mr. Ramsey, who thanked us for our interest and agreed to all our suggestions; and just before I left home he sent me a book covering laws which must be amended before the contract revision can go into effect.

I am frank to say that I believe in a

year or so all Government work will be done on a fair and equitable contract. I believe that all our efforts should be concentrated on Washington rather than on different States. However, there is a brighter day approaching. Contractors everywhere are realizing that they are a necessary adjunct to the business structure and that they are entitled to a fair and equitable contract, the provisions of which make them equals of the other party; and when this day arrives we will earn and merit the confidence of the public and respect for ourselves and no longer will be referred to as gamblers or crooks.—*The Constructor*.

## HOW FARMER JACKSON LOST \$600 TRYING TO SAVE \$300

BY F. W. IVES

*Agricultural Engineer*

Good friends, you do not pull your own teeth. Nor do you try to fill them. You go to the nearest dentist and let him do it.

The maker of building plans, the architect, is a somewhat rarer bird, with very little of the advantage of the dentist in dealing with people driven to him by sheer painful necessity. But, just the same, those who do *not* go to the architect at the first generally have the bitter experience of being stung by their own lack of knowledge in the long run.

The architect who cannot save you the amount of his fee on a building, in terms of convenience therein and on materials and workmanship, is not worthy of his hire. If he is a good architect, his period of study and preliminary training is fully as long as that of the average dentist, lawyer, and undertaker, to say nothing of the plumber, brickmason, and carpenter; and his help is often worth many times its cost.

Yet how often do we pass by the architect's service because we feel that it adds just that much expense to the house, and, besides, we can get plans for nothing, anyway! As a matter of fact, it usually costs more *not* to have an architect than it does to have one. A few typical examples will show you what I mean.

A student whom we will call Jackson lived on a farm. He sat in classes and heard the warning of an instructor about the cost of plumbing, chimneys, and stairways carelessly planned or not planned at all.

The next summer Jackson and his father decided to build a "modern" house, plumbing and "everything." A local carpenter, a good builder, helped them make a plan of a house something like one they had seen a picture of in some magazine. The plans were drawn on a pine board. After the frame was

up, the partitions in, and the roof on, they went to town to get a plumber to figure on the necessary piping. On account of the awkward arrangement and relation of bathroom, kitchen, and laundry, long leads of pipe were necessary. The plumber's estimate was \$1,200 for the job.

In despair, Jackson came to his former instructor and wanted to know if the plumber was robbing them. The instructor went over the rough sketches of the floor plans and showed Jackson where a few changes made in the start would have saved just half of the plumber's bill.

When asked why they had not employed an architect, Jackson stated that the plans would have cost \$300, and that would have been too much. The following example in arithmetic enlightened him, as it may some others:

\$1,200 estimated cost of plumbing.  
600 estimated saving by careful plan.  
\$ 600 loss by not having plan.  
300 architect's fee.

\$ 300 net saving had architect been employed.

There were other items that would have made their house more livable, and where a direct saving of about \$600 could have been made. Furthermore, an estimate of cost could have been made in advance.

Another man, anxious to save, bought a set of ready-made plans for 50 cents. An architect had asked him \$200. The house was a square, two-story affair of rather common arrangement. The frame was erected, the partitions set on both floors without considering the stairway or chimneys, these sometimes being left to the last in construction.

The day came when these necessary elements were to be built, and it was discovered that two separate plans had been used—one for the first floor and another for the second floor—two sets of plans of the same outside dimension having been mixed. The cost of making the necessary changes amounted to \$560 in labor and material. Your own arithmetic applied here will show you that the architect's plans would have saved not less than \$360 on this one item alone.

A good farmer obtained free plans from an equipment company. He took them to some local contractors for estimates. The lowest bid was \$6,000. This looked rather high to him, and he sought the service of a barn architect. By cutting out needless equipment, the barn was reduced in size, increased in efficiency and animal comfort, and new bids received were accepted at \$4,800. After

deducting the architect's fee, this farmer had saved nearly \$1,000.

These examples are typical of many that have come to the writer's attention, and may be verified by names and dates. They are given in hope that others will profit by them.

Any building worth building is worth planning and an estimate of cost and specifications, even if it be a dog house or a gate. A knowledge of cost in advance will save many a hard-earned dollar. It is the only check on a dishonest contractor, and a protection for the honest contractor as well as the owner.

A plan allows for change in the building before it is built. Changes in masonry, framing, plastering, etc., are much more expensive than erasing lines on a drawing.

Somehow I feel that if you pull your own teeth—why, then draw your own plans; the results will be much the same.—*Farm and Fireside.*

#### INTERLOCKING HOLLOW TILE WALLS PROVE EFFECTIVE FIRE BARRIER

The fire-resistive qualities of hollow tile were demonstrated in a very convincing manner at Stockton, Cal., recently, when the interior of a three-story apartment house was gutted by fire, while the exterior walls, built of interlocking tile, remained intact; in fact, the stucco with which the walls were covered was not even cracked. Architect Ralph P. Morrell of Stockton, planned the structure for the late Mr. W. H. Bennett, and it was supposed to represent the last word in apartment house design. The property was valued at \$150,000.

From one end of the country to the other we read of America's tremendous fire losses, averaging the past two or three years as high as \$5.25 per capita. Engineers who have studied the situation say there is but one real cure—build better buildings. Had the floors and partitions in the Bennett Apartments been composed of the same material as the exterior walls, there would have been a different story to tell. It is reasonable to assume that the damage to the building would have been nil. The flames would have been confined to the basement, where they originated. As it happened, the floors and joists were wood, and so was the lathing and interior trim. The exterior walls, then, constituted practically the only fireproof feature of the building. Had these walls been built of some other material, it is alarming to predict to what extent the fire would have raged. Probably the entire block would have been destroyed. To quote from an interview with the Stockton Building Inspector after the fire:

"There was a dwelling within three

feet of the Bennett Apartments, and the fact that the tile walls remained intact throughout undoubtedly permitted the saving of the dwelling, with no damage whatsoever. The entire outer shell of the building as it stands today can be used in rebuilding.

"The Bennett Apartment house was a three-story building, the exterior walls of which were 12 inches thick for the first two stories and 8 inches thick for the third story, and built of Denison interlocking terra-cotta tile. The damage by fire was greatest on the third story. The roof was entirely destroyed. With the exception of slight smoke damage on the northwest wall and the broken glass of the window, there was no damage whatever to the outside walls. A very careful inspection was made of the inside of the walls where the trim had burned away, and especially above the third floor ceiling, where the tile was exposed to the direct action of both fire and water, and there was no sign of failure of any kind in the tile walls."—*Architect and Engineer.*

#### BUREAU OF STANDARDS TESTS WEATHERING OF LIMESTONE

A series of tests to determine the resistance of limestone to frost action is now under way at the Bureau of Standards.

Small samples cut from the stone are soaked in water and are then frozen. After freezing they are put back in the water to thaw.

Of the samples tested many showed serious disintegration after they had been frozen seventy-five times. Others have now been frozen as many as eight hundred times and show as yet no serious disintegration. The samples come from different localities; and when the tests are completed the data will be of value to architects in the selection of building stone.

Limestone is now used extensively as a facing stone. It is less expensive than granite and more easily cut, which makes it quite popular. It is not so durable as granite, however, and is apt to show surface weathering within a hundred years.

Other tests being undertaken at the Bureau have to do with waterproofing compounds. The purpose of such compounds is to lengthen the life of the stone and prevent the absorption of unsightly stains.

The man with an order to place doesn't hunt you up in the city directory these days. He hasn't the time. If he can't find you in your trade magazine he can and does find somebody else, and that somebody else books the order.

## As The Editor Sees It

### GOOD CONCRETE UNDER JOB CONDITIONS

By WILLIAM C. KOBER, *Secretary, Adensite Co., Inc.*

The waterproofing and hardening of concrete is, to put it mildly, rather a vexed question in theory in this country; in practice, it is much simplified.

The dovetailing of theory with practice is a difficult procedure in this activity as the actual conditions under which production takes place are filled with a large number of what the laboratory man calls "variables."

Contractors ARE making hard and waterproof concrete on the job every day.

Conflicting opinions are current as to how such concrete is produced.

A little time spent in visiting architects and contractors will convince an observer that the large majority of concrete structures, where hardness and water resistance are vital, are executed with integral compounds. Questionnaires circulated among architects and engineers substantiate such observation.

There are a number of such compounds of high merit on our market today.

Some of these compounds are regularly exported to foreign countries. In Europe where the home production of such materials is small in number and the import is only of our best brands,

the question of choosing a compound is not as confusing as in America, where the builder, besides having a choice of a number of good products, is faced with the necessity of steering clear of a bewildering number of utterly worthless ones.

The contractor knows that when he deals with a water condition he needs either integral waterproofing in the concrete or a membrane to protect an untreated concrete. The practicing architect realizes this and provides for it.

If ordinary concrete walls, POURED ON THE JOB, with plain water, were waterproof in themselves, the old practice of using mastic and felt or sheet lead as a membrane would never have been so extensively carried on.

Certain laboratory men have their own opinion as to how good concrete should be produced. The general effect of the research work carried on by these men is of real value to the builder and of the greatest value when supplemented and amplified by field observations.

For practical purposes, it should be always borne in mind that a cement expert is a decidedly different agent compared with a concrete expert. The former is doing laboratory work that will be put into action in a thoroughly controlled production carried on in one spot under regulated conditions, while the latter is working in an enterprise where his findings are put into action in operations car-

ried on under conditions that must of necessity be the direct antithesis of the laboratory.

The laboratory viewpoint of concrete is based on a process carried on in an enclosed building, with a regulated temperature. Graded aggregates of fine quality are employed. The mixing, placing and rodding are performed by highly skilled men and the specimens are generally cured in damp storage. This method produces a sound concrete that is waterproof and dustless.

On the job, the temperature is whatever it happens to be. The aggregates are usually delivered "as is" and it is seldom practical to thoroughly analyze them. The labor is not made up of highly skilled technical men.

Under these conditions, the precision of the laboratory is difficult to obtain without some economical and simple method for reducing the variables.

The laboratory has shown conclusively that one of the most important factors in concrete is the water content.

In laboratory work the water content can readily be regulated with a mix of graded aggregates, cement and plain water under technical control all the way through production.

To handle and place concrete under existing commercial conditions with ordinary labor and materials and plain water, it is necessary to use an excess of water for lubricating purposes. In

**BLUE  
PRINTS**

general job handling, such a concrete does not get a proper distribution of water through the mix, even with a great excess. "Balling" occurs and much of the cement is not reached by the water. This unhydrated cement remains inert in the mass and its colloidal or gelatinous possibilities are not utilized.

The excess water, after the placing of the concrete, is partially carried away, taking with it particles of the cement and the remainder of this excess evaporates, leaving an excessive number of voids.

There are several floor finishing companies that obtain splendid results by placing the concrete wet and eliminating the excess water after laying by drawing it off. This is done by placing burlap over the wet concrete and placing the dry mix for the next batch on top of it. A floor with the excess water thus eliminated gives a sound, hard, dustless finish. This method has been in use for some years.

There are a number of liquid compounds on the market that so activate the water that a minimum amount may be employed at the beginning of production. Thus the expense and trouble of eliminating the water after placing is dispensed with.

These liquids break down the surface tension of water, diffuse the gauging liquid to a proper hydration of all the cement in the mix; and with a minimum water content gives the mass a plasticity that allows of proper handling and placing by ordinary labor under job conditions. These field observations are borne out by tests with the flow table and du-Nody apparatus.

By eliminating the excess water in the mix, at the same time hydrating the cement properly, the contractor on the job is taking a step forward in the production of sound concrete.

#### THE VALUE OF INSULATION

*How It Can Make Your Home More Comfortable*

There is no getting around the fact that some houses are cold and drafty while others of much the same size and appearance are warm and comfortable. Everybody knows about upstairs rooms in some houses that are veritable bake ovens in summer while rooms in other houses in the same neighborhood remain cool and comfortable even in the hottest weather. These facts often puzzle the prospective builder or buyer of a home. He wonders how he can obtain a comfortable house that will not demand excessive attention and heavy funds to heat and in which he will be assured of a cool summer night's rest. He wants a cool house in summer and a warm house in winter. There are a good many elements that enter into the achievements of these conditions.

#### *A Tight, Warm Home*

First of all, the house must be well built, the windows and doors must be tight; and the walls constructed so that air will not pass through them freely. Then there must be a good heating plant designed to supply heat where it is needed and in proper proportion to the size of the rooms and their exposures. Another requirement has to do with the planning of the house. Open stairways along outside walls form natural passages for currents of air. The outer wall being colder than other walls, chills the air lying against it more rapidly than elsewhere. Consequently the air drops. A stairway of this kind opening upon the living room is sure to make that room drafty. There are a great many details of this kind. Finally and certainly of equal importance is the matter of insulation. You cannot expect to have a house that will not be full of drafts if the outside walls are cold. With insulation in these walls we may avoid much of the discomfort that comes from rapidly changing temperatures in our homes.

#### *Reduced Coal Bills*

The method of obtaining a comfortable home from this point of view is one of the simplest details of building. Careful builders insulate their homes. That is the whole story. They require that a standard insulating material be placed within the walls and second story ceiling or upon the inner surfaces of studs and ceiling joists and it is this material, containing as it does millions of tiny dead air spaces, that is largely responsible for stopping the cold from coming and the heat from leaving.

The need of some material designed to prevent the passage of heat and cold through walls is as old as the art of building. In the sturdy homes of the first New Englanders we see the fore-runners of the modern insulating materials. "Wattle and daub" construction is found in many of these homes; the space between the timbers or studdings was filled with a mixture of mud and straw to keep out the cold. It is certain, too, that the old practice of building a home in vertical layers—that is covering a stone house with wood as an exterior finish or as an interior furring—was simply to impart greater cold resistance to the walls. Later on, "black plaster" became one of the essentials of good building. Until recent years all good houses—especially those in regions where winters are severe—were protected in this way. The contractor cut in lath between the studding and put an extra coat of plaster half way between inside and outside walls. The

## HARDENED CONCRETE FLOORS DO NOT DUST

It is not necessary to put up with dusting cement floors. Over night a soft cement surface from which the cement dust can easily be scratched with the toe of the shoe—can be transformed into a hard, impenetrable floor that will not “sand” or crumble, even under the hardest foot traffic. Phone or write us for information.
